# AASHTO Guide for Enterprise Risk Management

FIRST EDITION

2016

# Table of Contents

<b>■ Foreword</b> .....	1	Step 2: Provide the Tools for Managing Risks .....	34
<b>■ Introduction—About This Guide</b> .....	3	Step 3: Integrate Risks into Key Agency Processes .....	36
How to Use This Guide .....	4	Summarizing the Tasks and Responsibilities .....	39
<b>■ Chapter 1: Defining Risk Management</b> .....	5	<b>■ Chapter 3: Establishing the Risk Context</b> .....	43
Summary .....	5	Summary .....	43
Clarifying Risk and Risk Management .....	7	Identifying Risk Focus Areas and Risk Owners .....	43
Managing Risks Complements Performance .....	7	Assigning Risks and Forming Teams to Assess Them .....	43
Enhancing Decision Making by Evaluating Risks .....	10	Clarifying the Objectives and Their Environment .....	44
Allocating Scarce Resources .....	11	Setting the Context around the Objective .....	44
Identifying and Mitigating Threats .....	12	Examples of Applying the Risk Management Process .....	46
The Levels of Risk Management .....	13	Tools for the Context-Setting Exercise .....	47
The Risk Management Process .....	15	Basis for Further Decision Making .....	48
The ISO Concepts .....	16	<b>■ Chapter 4: Identifying Risks</b> .....	53
Establishing the Context .....	16	Summary .....	53
Risk Identification .....	17	Risk Identification: First Step of Risk Assessment .....	53
Risk Analysis .....	18	Beginning the Risk Identification Process .....	53
Risk Evaluation .....	18	Techniques for the Risk Identification Workshop .....	54
Risk Management .....	18	<b>■ Chapter 5: Analyzing Risks</b> .....	61
Communication and Monitoring .....	19	Summary .....	61
Level of Effort for Enterprise Risk Management .....	20	Understanding the Causes and Effects of Risks .....	61
Relying on Risk Management to Improve Performance .....	21	Determining the Cause of the Risks .....	63
<b>■ Chapter 2: Establishing the Risk Process</b> .....	25	Cause-and-Effect Analysis .....	65
Summary .....	25	Risk Analysis Tools .....	66
Essentials for ERM: Policies, Tools, and Processes .....	25	Strengths, Weaknesses of Qualitative and Quantitative Scales .....	66
Step 1: Adopt a Risk Management Policy .....	26	Consequence Categories .....	70
A Sample Risk Management Policy .....	32	Likelihood Table or Scale .....	72

Rating Opportunities.....	76	Georgia Department of Transportation .....	113
<b>■ Chapter 6: Evaluating Risks .....</b>	<b>79</b>	Case Study of Asset Management Liability in Australia..	114
Summary .....	79	A Case Study of U.S. Transit Agency Risk Management .	115
The Risk Appetite .....	79	Managing Risks to Highway Safety .....	116
Dynamic and Continuous Evaluation of the Risk Appetite...	82	Australian, Canadian, and British Frameworks .....	117
Risk Prioritization.....	82	U.S. Risk-Based Highway Safety Examples .....	120
<b>■ Chapter 7: Managing Risks .....</b>	<b>85</b>	Managing Risk from External Threats .....	123
Summary .....	85	General Risk or Threat Assessments .....	123
The Five Ts.....	87	Climate Change Risks .....	124
<b>■ Chapter 8: Communicate, Consult, Monitor...95</b>		Rock Fall Hazard Programs .....	127
Summary .....	95	Seismic Risk Assessment Approaches.....	129
Using the Agency’s Risk Process .....	95	Bridge Scour Risks .....	130
Populating the Risk Register .....	96	A Case Study of Balancing Investments in Assets and Preparing for External Threats .....	130
The Risk Map .....	98	Managing Risks to Financial Resources .....	132
Key Risk Indicators as Leading Metrics.....	100	Managing Information and Decision Risks .....	135
Communicating with and Monitoring the External Environment .....	101	General Information System Risks .....	135
Consulting with Stakeholders .....	101	Managing Risks to Models .....	139
Measuring Risk Management Maturity .....	102	Managing Risks to Business Operations.....	140
<b>■ Chapter 9: Managing Risks to Key Programs . 105</b>		Traditional Risk Management.....	140
Summary .....	105	Risks from Theft, Fraud, and Malfeasance.....	140
Managing Risks to Transportation Assets .....	105	Controlling Risks to Inventory.....	143
Examples of Risk in Asset Management Manuals.....	106	Managing Employee Safety and Workers’ Compensation .....	144
Asset Management Manuals .....	106	Managing Risks to Programs and Projects .....	146
U.S. Asset Management Plans.....	111	Guidebook on Risk Analysis and Management Practices to Control Project Costs.....	146
New York State Department of Transportation Risk Assessment .....	111	Caltrans Project Risk Management Handbook.....	146
Colorado Department of Transportation Asset Management Plan .....	112	Project Risk Management Guidance for WSDOT Projects.....	147
Minnesota Department of Transportation .....	113		

Guide for Managing Risk on Rapid Renewal Projects.....	147	Vermont Risk Register .....	174
Managing Risks on Complex Projects.....	148	NCDOT Risk Register .....	180
<b>■ Chapter 10: Critical Review of the State of the Practice and Case Studies .....</b>	<b>149</b>	Washington DOT Risk Register.....	182
Summary .....	149	Funding Risks.....	186
State of the Practice .....	149	Financial Risk Tools.....	189
Corporate Sector Summary.....	149	Basic Spreadsheet Tools .....	191
From Financial to Enterprise Risk Management .....	150	Incorporating Elements of the Delphi Technique .....	193
Risk Management Embedded in Corporate Practice .....	152	Deterministic Computations Incorporating Variability .....	194
Corporate Summary .....	158	Incorporating Randomness in Uncertain Variables .....	196
NCHRP Studies Summary .....	158	Stochastic Methods — Monte Carlo Simulations .....	199
Case Studies of U.S. Practice .....	159	Illustrative Example .....	199
Australian Risk Management Summary .....	167	Results from a Customized Simulator .....	200
<b>■ Chapter 11: Advanced Risk Tools .....</b>	<b>173</b>	Commercially Available Software .....	204
Summary .....	173	Other Tools to Facilitate Decision Making .....	209
Risk Registers .....	173	Conclusions .....	211
		Glossary .....	213

Table 11-26. Snapshot of Results from One Iteration for Various Categories of Projected Uses .....	206
Table 11-27. Comparison of Deterministic Versus Stochastic Projections .....	206

## Foreword

The *AASHTO Guide for Enterprise Risk Management* explains how state transportation agencies can establish and benefit from an enterprise risk management program. It defines risk management and illustrates how it complements strategic planning and performance management. The guide explains how the managing of risk provides agencies with a new set of skills to increase the likelihood that they will achieve their strategic objectives. The guide focuses upon enterprise risk management which is defined as the formal and systematic effort to control uncertainty and variability to an organization's strategic objectives by managing risks at all levels of the organization. The guide also explains how to manage risks at four levels, the enterprise, program, project, and activity levels. The guide includes extensive summaries of how risk management is being applied nationally and internationally to typical transportation program areas.

This work was sponsored by the American Association of State Highway and Transportation Officials in cooperation with the Federal Highway Administration, and was conducted by the National Cooperative Highway Research Program (NCHRP). This guide is based on research conducted under NCHRP Project 08-93, *Managing Risk Across the Enterprise: A Guidebook for State Departments of Transportation*.

## Introduction—About This Guide

This guide for state departments of transportation (DOTs) provides a comprehensive framework to identify and manage risk. It will help state DOTs plan, staff, implement, and evaluate consistent and effective enterprise risk management efforts. It demonstrates the benefit and strategic value of enterprise risk management to executive and senior staff while building on the findings of previous research and international scan findings. The guide defines risk management, explains its components, and illustrates how it can improve performance, credibility, and transparency.

For U.S. transportation agencies, risk management generally has been confined to managing risk to construction project cost, scope, and schedule. The expansion of interest in enterprise risk management reflects a growing recognition that risk management can play an important, broader role. It can help organizations manage risks to all objectives, not just those related to project schedules and scopes.

Risk management is the natural complement to performance and asset management. Performance management leads agencies to set goals and direct resources to achieve them. However, all goals include uncertainties and risks. Risk management helps identify, measure, manage, and mitigate those risks. It provides a realistic assessment of the uncertainties or impediments surrounding an organization's objectives and a systems approach to addressing them. As agencies move into the performance era inaugurated by the Moving Ahead for Progress in the 21<sup>st</sup> Century Act (MAP-21), they will find enterprise risk management to be a complementary framework to help them achieve their performance objectives.

Risk management also helps make difficult investment tradeoffs. By casting decisions in terms of risk, agencies can clarify and explain investment priorities.

Even if not spurred by MAP-21, U.S. transportation agencies are well served by enterprise risk management. Applying risk management to transportation agencies transfers a sound management practice from the corporate world to the public sector. In the corporate world, risk management is viewed as a basic competency. It recognizes that in a complex environment, achievement of organizational goals depends on managing many internal and external risks. Failure to measure, manage, and mitigate these risks increases the likelihood of failure. If risks and uncertainties are inevitable, failing to consider them is irresponsible.

This guide helps an agency create an enterprise risk management program. It defines enterprise risk management as a comprehensive approach to addressing risks at all levels of the organization. Because an agency's strategic objectives depend on achieving goals and targets at every level, enterprise risk management drills down to the program, project, and activity levels. It illustrates the integration of risk management into an agency's key programs by explaining how it can be applied not only to strategic objectives, but also to the following:

- Transportation asset management
- Highway safety
- External threats, such as climate change
- Financial forecasting
- Information or decision risks
- Program and project risks related to costs, scopes, and schedule
- Traditional business operation risks, such as theft and workforce injuries.

This guide expands on earlier research. The report on National Cooperative Highway Research Program (NCHRP) Project 20-24 (74), *Executive Strategies for Risk Management by State Departments of Transportation*, analyzed information from 43 state DOTs and identified executive-level strategies for implementing enterprise-wide risk management. A 2011 international scan of transportation agency risk management practices found that leading transportation agencies in Australia, England, Germany, the Netherlands, and Scotland have mature risk management policies and procedures. It is entitled *Transportation Risk Management: International Practices for Program Development and Project Delivery*. The 2012 NCHRP Web-Only Document 183, *Guide for Managing NEPA-Related and Other Risks in Project Delivery*, addressed risks related to National Environmental Policy Act (NEPA) decision making.

## ***How to Use This Guide***

A well-known adage says some people just want to tell time and others want to know how to build a clock. This guide is designed for both.

**Chapter 1 is an executive summary that distills every other section of the guide.** A reader who only wants the “what” and “why” of risk management could read just this chapter to get an overview of the entire guide.

**Chapter 2 is a “getting started” section that explains how to create a risk management program.** It presents the policies, tools, and processes needed to create an ongoing risk management program. It describes what is needed to implement and sustain an enterprise risk management program.

**Chapters 3 through 8 are quite detailed and describe the steps agency staff can take to manage risks at all levels of the organization.** They include tools to be used in workshops to identify and assess risks. They also describe agency-wide practices to compile identified risks and sort them for executive decision making. They conclude with a section on measuring an agency’s risk management maturity.

**Chapter 9 provides more detail on how risk is being applied nationally and internationally to typical transportation program areas.** It summarizes how U.S. and international transportation agencies apply risk management to key programs such as highway safety and asset management, and to traditional business operations such as purchasing and inventory control.

**Chapter 10 is a critical review of the state of practice,** both in public and private sectors.

**Chapter 11 is an advanced section that demonstrates risk management tools,** such as Monte Carlo simulation that quantifies risk probabilities.
