Specification for Carbon and Glass Fiber-Reinforced Polymer Bar Materials for Concrete Reinforcement

Copyright by the American Concrete Institute, Farmington Hills, MI. All rights reserved. This material may not be reproduced or copied, in whole or part, in any printed, mechanical, electronic, film, or other distribution and storage media, without the written consent of ACI.

The technical committees responsible for ACI committee reports and standards strive to avoid ambiguities, omissions, and errors in these documents. Despite these efforts, the users of ACI documents occasionally find information or requirements that may be subject to more than one interpretation or may be incomplete or incorrect. Users who have suggestions for the improvement of ACI documents are requested to contact ACI via the errata website at <http://concrete.org/Publications/Documents/Errata.aspx>. Proper use of this document includes periodically checking for errata for the most up-to-date revisions.

ACI committee documents are intended for the use of individuals who are competent to evaluate the significance and limitations of its content and recommendations and who will accept responsibility for the application of the material it contains. Individuals who use this publication in any way assume all risk and accept total responsibility for the application and use of this information.

All information in this publication is provided “as is” without warranty of any kind, either express or implied, including but not limited to, the implied warranties of merchantability, fitness for a particular purpose or non-infringement.

ACI and its members disclaim liability for damages of any kind, including any special, indirect, incidental, or consequential damages, including without limitation, lost revenues or lost profits, which may result from the use of this publication.

It is the responsibility of the user of this document to establish health and safety practices appropriate to the specific circumstances involved with its use. ACI does not make any representations regarding health and safety issues and the use of this document. The user must determine the applicability of all regulatory limitations before applying the document and must comply with all applicable laws and regulations, including but not limited to, United States Occupational Safety and Health Administration (OSHA) health and safety standards.

Participation by governmental representatives in the work of the American Concrete Institute and in the development of Institute standards does not constitute governmental endorsement of ACI or the standards that it develops.

ACI documents are written via a consensus-based process. The characteristics of ACI technical committee operations include:

- (a) Open committee membership
- (b) Balance/lack of dominance
- (c) Coordination and harmonization of information
- (d) Transparency of committee activities to public
- (e) Consideration of views and objections
- (f) Resolution through consensus process

The technical committee documents of the American Concrete Institute represent the consensus of the committee and ACI. Technical committee members are individuals who volunteer their services to ACI and its specific technical committees.

The committee also thanks Nick Carino, Bernard Drouin, Jack Lesko, and Roberto Parretti for their contributions.

This Material Specification covers provisions covering testing, evaluation, and acceptance of carbon fiber-reinforced polymer (FRP) bars used as reinforcement for concrete.

Keywords: carbon fiber; concrete; concrete construction; FRP reinforced concrete; fiber-reinforced polymer reinforcement; specification.

All rights reserved including rights of reproduction and use in any form or by any means, including the making of copies by any photo process, or by electronic or mechanical device, printed, written, or oral, or recording for sound or visual reproduction or for use in any knowledge or retrieval system or device, unless permission in writing is obtained from the copyright proprietors.

SECTION 1—SCOPE

1.1 This specification describes permitted constituent materials, limits on constituent volumes, and minimum performance requirements for carbon fiber-reinforced polymer (FRP) bars to be used as reinforcement for nonprestressed concrete.

1.2 Only carbon FRP bars are covered by this specification.

1.3 FRP bars made of more than one fiber type (hybrid FRP) are not covered by this specification.

1.4 Pultruded FRP bars with no external surface enhancement (that is, plain or smooth bars) to facilitate bond with concrete are not covered by this specification. Similarly, hollow FRP bars are not considered due to lack of documented performance as reinforcement for concrete.

1.5 Plain FRP bars used as dowels (that is, devices that transfer shear across concrete joints) where the intended function requires slip of the dowel are not covered by this specification.

1.6 This specification does not cover premanufactured grids and gratings made with FRP materials. FRP mats resulting from assembly of deformed FRP bars, however, are covered by this document.

1.7 This specification does not cover FRP bars when used for external and near-surface-mounted strengthening applications.

1.8 The text of this specification references notes and footnotes that provide explanatory material. These notes and footnotes (excluding those in tables and figures) shall not be considered as requirements of the specification.

2.2—ACI report

The following test method from ACI 440.3R,* “Guide Test Method for Fiber-Reinforced Polymers (FRPs) for Reinforcing or Strengthening Concrete Structures,” is referenced because this test method is not written in mandatory language, purchaser and manufacturer shall agree on the protocols to be used.

B.12 Test method for determining the effect of corner radius on tensile strength of FRP bars

SECTION 3—TERMINOLOGY

3.1—Definitions

For definitions of terms used in this specification, refer to ASTM C904.

3.2—Definitions of terms specific to this specification

commercial-grade material—a material formulated for and used in industrial (not consumer) applications.

production lot—any lot of FRP bar produced from start to finish with the same constituent materials used in the same proportions without changing any production parameter, such as cure temperature or line speed.

property, guaranteed—a characteristic value provided by the manufacturer no greater than the mean minus three standard deviations of at least the required number of samples tested according to a specified test method. This definition is applicable to tensile strength, shear strength (perpendicular to the bar), bond strength, and strength of bent bars.
