American National Standard
For Power Tools –

**Gasoline-Powered Chain Saws -
Safety Requirements**

Secretariat
Portable Power Equipment Manufacturers Association

Approved October 27, 2000
American National Standards Institute, Inc.

American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This foreword is not part of American National Standard B175.1-2000.)

This standard sets forth the minimum safety requirements for gasoline-powered chain saws. These requirements have resulted from several years of standards development effort by the ANSI B175 Accredited Standards Committee. The original standard was approved in 1979 and revised in 1983, 1985, and 1991.

The changes in this revision include: addition of the requirement for a chain catcher; increased tank filler opening sizes; a revision to the method of measuring front hand guard clearances; changes to vibration and chain brake performance requirements; refinements to test procedures for sound, vibration and kickback; an update of the programming language used for calculation of Computed Kickback Angle; and revision of requirements for instruction manuals.

This standard contains eleven annexes, ten of which are informative and are not considered part of this standard. Annex C, Safety precautions for chain saw users, is normative and is considered part of this standard.

Suggestions for improvement of this standard are welcome. They should be sent to the Secretariat, ASC B175 Committee, 4340 East West Highway, Suite 912, Bethesda, MD 20814.

This standard was processed and approved for submittal to ANSI by the Accredited Standards Committee B175. Committee approval of this standard does not necessarily imply that all committee members voted for its approval. At the time it approved this standard, the B175 Committee had the following members:

Arv Hille, Chairman

Organization Represented

Andreas Stihl
Blount/Oregon Cutting Systems
Carlton Company
U.S. Consumer Product Safety Commission
Echo Incorporated
Electrolux
Kawasaki Motors Corp., U.S.A.
North American Equipment Dealers Association
Underwriters Laboratories
USDA Forest Service
US Dept. of Labor (OSHA)

Name of Representative

Manfred Bortfeld
Arv Hille
Shane Behbahany
John Murphy
Rob Stegall
Dan Ericsson
Jeff Shetler
Norman Beck
Edgar Wolff-Klammer
Ralph Gonzales
Richard Sauger

Individual Members

Ralph Lombard
Ronald Loyd
Vincent Morabit

American National Standard
for Power Tools —

Gasoline-Powered Chain Saws — Safety Requirements

1 Scope and purpose

1.1 Scope

The requirements of this standard apply to portable, hand-held, gasoline-powered chain saws for use primarily in cutting wood.

NOTE — Metric units are included for information only.

1.2 Purpose

The purpose of this standard is to establish minimum safety requirements with respect to the manufacture of portable, hand-held, gasoline-powered chain saws.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.

ANSI S1.4-1983 and its supplement ANSI S1.4A-1985, *Specification for sound level meters*

ANSI S2.11-1969 (R1986), *Methods for specifying the characteristics of auxiliary equipment for shock and vibration measurement*

ANSI/SAE J184-FEB87, *Qualifying a sound data acquisition system*
