American National Standards Institute, Inc.

NOTICE AND DISCLAIMER

The information in this publication was considered technically sound by the consensus of persons engaged in the development and approval of the document at the time it was developed. Consensus does not necessarily mean that there is unanimous agreement among every person participating in the development of this document.

ANSI standards and guideline publications, of which the document contained herein is one, are developed through a voluntary consensus standards development process. This process brings together volunteers and/or seeks out the views of persons who have an interest in the topic covered by this publication. While NEMA administers the process to promote fairness in the development of consensus, it does not write the document and it does not independently test, evaluate, or verify the accuracy or completeness of any information or the soundness of any judgments contained in its standards and guideline publications.

NEMA disclaims liability for any personal injury, property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, application, or reliance on this document. NEMA disclaims and makes no guaranty or warranty, expressed or implied, as to the accuracy or completeness of any information published herein, and disclaims and makes no warranty that the information in this document will fulfill any of your particular purposes or needs. NEMA does not undertake to guarantee the performance of any individual manufacturer or seller's products or services by virtue of this standard or guideline.

In publishing and making this document available, NEMA is not undertaking to render professional or other services for or on behalf of any person or entity, nor is NEMA undertaking to perform any duty owed by any person or entity to someone else. Anyone using this document should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. Information and other standards on the topic covered by this publication may be available from other sources, which the user may wish to consult for additional views or information not covered by this publication.

NEMA has no power, nor does it undertake to police or enforce compliance with the contents of this document. NEMA does not certify, test, or inspect products, designs, or installations for safety or health purposes. Any certification or other statement of compliance with any health- or safety-related information in this document shall not be attributable to NEMA and is solely the responsibility of the certifier or maker of the statement.

AMERICAN NATIONAL STANDARD

Approval of an American National Standard requires verification by the American National Standards Institute, Inc. (ANSI) that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer. An American National Standard implies a consensus of those substantially concerned with its scope and provisions. Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly, and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The existence of an American National Standard does not in any respect preclude anyone, whether s/he has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards. It is intended as a guide to aid the manufacturer, the consumer, and the general public.

ANSI does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the ANSI. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on this title page.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of ANSI require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing ANSI.

1 Scope

This standard sets forth the physical and electrical characteristics of those groups of subminiature incandescent lamps with T1 and T1-3/4 bulb shapes. Lamps with various base or termination configurations are included.

2 Reference Standards and Related Publications

2.1 Normative References

When the following American National Standards, referred to in this standard, are superseded by a revision approved by the American National Standards Institute, the revision shall apply.

ANSI C79.1-2002 *Nomenclature for Glass Bulbs Intended for use with Electric Lamps*

ANSI/IEC C81.61-2003 *Electrical Lamps Bases*

ANSI/IEC C81.63-2004 *Gauges for Electrical Lamp Bases and Lampholders*

ANSI C78.370.390lcd-2002 *ANSI for Electric Lamps—Amendments to ANSI C78.370-1997 and ANSI C78.390-1998*

ANSI C78.390-1998 *Method of Designation for Electric Lamps—Miniature and Sealed Beam Incandescent Lamps*

SAE Ground Vehicle Lighting Standards Manual, 2002 Edition

2.2 Related Publications

ANSI/SAE SR25d-1997, *Special Report on Assigned Miniature Lamp Codes*

3 Lamp Designations

Lamp number designations are assigned to miniature lamps according to ANSI C78.390. Numbers are assigned by the administrator of the Lamp Code Designation program. All lamp numbers covered by this standard are listed in Tables 1 through 9 along with their rated voltage and design ampere, MSCd (mean spherical candela), life, LCL (light center length), MOL (maximum overall length), and filament shape as requested in their original lamp code designation requests.

If a manufacturer objects to a newly issued lamp code designation number, see the resolution procedure in C78.370.390lcd supplement to C78.390.

4 Bulb Designations

Bulb designations are defined in ANSI C79.1. Since the traditional eighth-inch sizes have long been utilized for lamps of this kind, their use is continued in this standard.
