American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword (This foreword is not part of American National Standard ANSI Z80.7-2013 (R2018).)

The Z80 Standards Committee for Ophthalmic Lenses was organized in 1956, and the committee's initial standard was issued in 1964. At the beginning of 1970, the Z80 Standards Committee was reorganized, with the Optical Society of America serving as secretariat. In 1972, the committee was authorized to broaden its scope from "prescription glass ophthalmic lenses" to "prescription ophthalmic lenses." Subsequently, the scope of the committee was further broadened to "ophthalmic standards."

The first Z80.7 subcommittee on intraocular lenses was established in 1976 to provide intraocular lens standards that could be used by both manufacturers and physicians. Intraocular lenses are lenses that have optical and haptic components and that are surgically implanted in the anterior or posterior chamber of the eye to correct vision.

In 1982, the Optical Laboratories Association (OLA) assumed the responsibility of the Secretariat; and in 1985, the Z80 committee became an accredited standards committee. The scope of the Z80 committee is for the establishment of standards that shall apply to ophthalmic lenses and to equipment, instruments and processes used in the final fabrication level which affect their performance; to ophthalmic frames, sunglasses and fashion eyewear; to contact lenses and accessories for their use; to low-vision aids and ophthalmic contact devices in addition to contact lenses; to optical instrumentation used in ophthalmic procedures and vision evaluation; to intraocular implant lenses; to viscoelastic devices; to aid ophthalmic endotamponades, ophthalmic irrigating solutions, glaucoma shunts, surgical microscopes used in ophthalmic surgery and endoilluminators. Further additions were made concerning not only intraocular implants used in cataract surgery, but also in refractive surgery in phakic eyes, laser reshaping of the cornea and corneal implants to alter the refractive power of the eye.

The Z80.7 subcommittee deals with intraocular aphakic implants to correct the condition of aphakia.

The current ophthalmic standards are created by subcommittees of the Z80 committee. These subcommittees may, in turn, establish working groups, as needed, to address detailed areas in the assigned project.

This standard contains five annexes. Annexes A through C are normative and are considered part of this standard. Annexes D and E are informative and are not considered part of this standard.

Suggestions for improvement of this standard will be welcome. They should be sent to The Vision Council, 225 Reinekers Lane, Suite 700, Alexandria, VA 22314.

This standard was processed and approved for submission to ANSI by the Accredited Standards Committee on Ophthalmics, Z80. Committee approval of this standard does not necessarily imply that all committee members voted for its approval. At the time it approved this standard, the Z80 committee had the following members:

Thomas C. White, Chairperson
Guido Cappelli, Vice-Chairperson
Robert Rosenberg, Secretary
Jeffrey Endres, Secretariat

American National Standard
for Ophthalmic Optics –

Intraocular Lenses

1 Scope and Purpose

This standard applies to monofocal intraocular lenses (IOLs) whose primary indication is the correction of aphakia.

This standard addresses the vocabulary, optical properties and test methods, mechanical properties and test methods, biocompatibility, sterility, shelf-life and transport stability, and clinical investigations necessary for this type of device.

2 Normative references

The following standards contain provisions that, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of the IEC and ISO maintain registers of currently valid International Standards.
