

Process Analyzers

API RECOMMENDED PRACTICE 555
THIRD EDITION, JUNE 2013

REAFFIRMED, JUNE 2020

AMERICAN PETROLEUM INSTITUTE

Special Notes

API publications necessarily address problems of a general nature. With respect to particular circumstances, local, state, and federal laws and regulations should be reviewed.

Neither API nor any of API's employees, subcontractors, consultants, committees, or other assignees make any warranty or representation, either express or implied, with respect to the accuracy, completeness, or usefulness of the information contained herein, or assume any liability or responsibility for any use, or the results of such use, of any information or process disclosed in this publication. Neither API nor any of API's employees, subcontractors, consultants, or other assignees represent that use of this publication would not infringe upon privately owned rights.

API publications may be used by anyone desiring to do so. Every effort has been made by the Institute to assure the accuracy and reliability of the data contained in them; however, the Institute makes no representation, warranty, or guarantee in connection with this publication and hereby expressly disclaims any liability or responsibility for loss or damage resulting from its use or for the violation of any authorities having jurisdiction with which this publication may conflict.

API publications are published to facilitate the broad availability of proven, sound engineering and operating practices. These publications are not intended to obviate the need for applying sound engineering judgment regarding when and where these publications should be utilized. The formulation and publication of API publications is not intended in any way to inhibit anyone from using any other practices.

Any manufacturer marking equipment or materials in conformance with the marking requirements of an API standard is solely responsible for complying with all the applicable requirements of that standard. API does not represent, warrant, or guarantee that such products do in fact conform to the applicable API standard.

Users of this Standard should not rely exclusively on the information contained in this document. Sound business, scientific, engineering, and safety judgment should be used in employing the information contained herein.

Copyright reserved. No part of this work may be reproduced, translated, stored in a retrieval system, or transmitted by any means, electronic, mechanical, photocopying, recording, or otherwise, without prior written permission from the publisher. Contact the Publisher, API Publishing Services, 1220 L Street, NW, Washington, DC 20005.

Foreword

Nothing contained in any API publication is to be construed as granting any right, by implication or otherwise, for the manufacture, sale, or use of any method, apparatus, or product covered by letters patent. Neither should anything contained in the publication be construed as insuring anyone against liability for infringement of letters patent.

Shall: As used in a standard, “shall” denotes a minimum requirement in order to conform to the specification.

Should: As used in a standard, “should” denotes a recommendation or that which is advised but not required in order to conform to the specification.

This document was produced under API standardization procedures that ensure appropriate notification and participation in the developmental process and is designated as an API standard. Questions concerning the interpretation of the content of this publication or comments and questions concerning the procedures under which this publication was developed should be directed in writing to the Director of Standards, American Petroleum Institute, 1220 L Street, NW, Washington, DC 20005. Requests for permission to reproduce or translate all or any part of the material published herein should also be addressed to the director.

Generally, API standards are reviewed and revised, reaffirmed, or withdrawn at least every five years. A one-time extension of up to two years may be added to this review cycle. Status of the publication can be ascertained from the API Standards Department, telephone (202) 682-8000. A catalog of API publications and materials is published annually by API, 1220 L Street, NW, Washington, DC 20005.

Suggested revisions are invited and should be submitted to the Standards Department, API, 1220 L Street, NW, Washington, DC 20005, standards@api.org.

Section A—Process Analyzer Considerations

A.1	Scope	1
1	Analyzer Selection Design Requirements	1
1.1	Economic Considerations	1
1.2	Environmental and Safety Considerations	2
1.3	Technical Considerations	2
2	System Data Management Requirements	3
2.1	General	3
2.2	Analog Transmission	3
2.3	Digital Transmission	3
2.4	Discrete Transmission	5
2.5	Other Types of Protocols	5
3	Analyzer System Calibration and Validation	5
3.1	General	5
3.2	Calibration	5
3.3	Validation	10
4	Sample Conditioning	10
4.1	General	10
4.2	Functions of a Sample System	11
4.3	Design Factors	11
5	Prepackaged Systems	29
5.1	General	29
5.2	Advantages of Pre-Packaged Systems	31
5.3	Total Systems Approach	31
6	Maintenance, Training, Installation, Inspection, Testing, and Startup Requirements	31
6.1	Maintenance	31
6.2	Training	36
6.3	Installation and Safety	39
6.4	Inspection and Testing	46
6.5	Commissioning	50
7	Safety Requirements	56
7.1	General	56
7.2	Samples Line and Sample System Components	56
7.3	Electrical Safety	56
7.4	Personal Safety	56
7.5	Maintenance Requirements	56
Annex A	References	58

Section B—Safety and Environmental Considerations

B.1	Scope	61
8	Area Safety Monitors	62
8.1	General	62

Contents

	Page
8.2 Area Monitoring For Toxic Gases	62
8.3 Area Monitoring for Combustible Gas	65
8.4 Area Monitoring for Fire and Smoke	66
8.5 Area Monitoring Sampling Systems	73
8.6 Calibration, Startup, and Maintenance	77
9 Continuous Emission Monitoring Systems	80
9.1 Applications	80
9.2 Regulations and Monitoring Requirements	80
9.3 Measurement Techniques Utilized In CEM Systems	81
9.4 In-Situ Analyzers	83
9.5 Types of CEMS	83
9.6 Special Considerations	84
9.7 Safety of CEM Systems	85
9.8 Calibration of CEM Systems	86
9.9 Maintenance of CEM Systems	86
10 Wastewater and Water Treatment Analyzers	86
10.1 Total Carbon (TC) and Total Organic Carbon (TOC)	86
10.2 Total Oxygen Demand Wastewater Analyzers	89
10.3 Turbidity Analyzers	90
10.4 Residual Chlorine Analyzers	94
10.5 Hydrocarbons-In-Water Analyzers	98
10.6 pH Measurements for Wastewater Analysis	101
10.7 Dissolved Oxygen In Wastewater Analysis	101
10.8 Water Treatment Analyzers	102
Annex B—References	106

Section C—Spectroscopic Chemical Composition Analyzers

C.2 Scope	107
11 Infrared Spectroscopy	107
11.1 General	107
11.2 Infrared Detectors	109
11.3 Infrared Applications	110
11.4 Typical Infrared Application Specifications	111
11.5 Sampling Systems	112
11.6 Tunable Diode Laser (TDL) Spectroscopy	112
12 Ultraviolet (UV) Spectroscopy	115
12.1 General	115
12.2 Measurement Principles	115
12.3 Applications	116
12.4 Sampling Systems	118
12.5 Installation, Safety, Startup	118
13 Mass Spectrometry	118
13.1 General	118
13.2 Operation	118

Contents

	Page
13.3 Applications	120
13.4 Analyzer Location	120
13.5 Sampling Systems	120
13.6 Safety Considerations	120
13.7 Calibration	121
13.8 Startup	121
14 X-ray Absorption	122
14.1 General	122
14.2 Safety Concerns	122
14.3 X-ray Absorption Applications	123
14.4 Analyzer Location	123
14.5 Sampling Systems	123
14.6 Calibration and Startup	123
15 Ion Mobility Spectroscopy	123
15.1 General	123
15.2 Safety Concerns	124
15.3 IMS Applications	125
15.4 Analyzer Location	125
15.5 Sampling Systems	125
15.6 Calibration and Startup	126
16 Nuclear Magnetic Resonance	126
16.1 General	126
16.2 Typical NMR Specifications	129
16.3 Sampling Systems	129
Annex C—References	130
Section D—Non-Spectroscopic Chemical Composition Analyzers	
D.2 Scope	131
17 Gas Chromatographs	131
17.1 General	131
17.2 Utilization In Refineries	132
17.3 Typical Applications	132
17.4 Application Variables	142
17.5 Simplified Chromatograph Theory	144
17.6 Components Of The Process Chromatograph	144
17.7 Calibration	156
17.8 Installation and Inspection of New Analyzer Installations	158
17.9 Initial Startup Procedures	159
18 Moisture Analyzers	160
18.1 General	160
18.2 Types of Moisture Analyzers	160
18.3 Sampling Systems	167
18.4 Calibration and Startup	169
19 Oxygen Analyzers	172

Contents

	Page
19.1 General	172
19.2 Types of Oxygen Analyzers	175
19.3 Sampling Systems	180
19.4 Safety Considerations	181
19.5 Calibration	182
19.6 Maintenance	182
20 Sulfur Analyzers	183
20.1 General	183
20.2 Measurement Techniques	183
20.3 Application Considerations	184
20.4 Analyzer Types and Applications	185
20.5 Sample Preparation System	192
20.6 Calibration and Maintenance	195
Annex D—Normative References	197

Section E—Physical Property Analyzers

E.1 Scope	201
E.2 Terms and Definitions	201
E.3 General	202
E.4 Safety Considerations	202
E.5 Analyzer Location	203
E.6 Sampling Systems	203
E.7 Readout	205
E.8 Checking and Calibration	205
E.9 Special Precautions	207
E.10 Startup	207
E.11 Shutdown Procedures	207
21 Pour Point Analyzers	208
21.1 General	208
21.2 Application	208
21.3 Principles of Pour Point Measurements	208
21.4 Operating Methods	208
21.5 Sampling Systems	209
21.6 Installation and Calibration	210
22 Cloud Point and Freeze Point	211
22.1 General	211
22.2 Definitions	211
22.3 Cloud Point General	211

Process Analyzers

Section A—Process Analyzer Considerations

A.1 Scope

Process monitors that measure and transmit information about chemical composition, physical properties, or chemical properties are known as *process analyzer systems*. Many of these systems were first developed for laboratory analysis. Today they are primarily used as continuous on-line analyzers.

A process monitoring system usually requires a sample conditioning system, a process analyzer, and one or more data output devices. Properly designed systems also require overall considerations as to calibration, utilities, sample disposal, safety, and systems packaging.

Process analyzers measure chemical concentrations or physical or chemical properties that can be used as control variables instead of relying on indirect physical parameters, such as pressure, temperature, and inferred data from computer models. Process analyzer systems can provide a significant economic return when incorporated into process optimization and advanced control loops or when used for product quality control.

This section will address the generic design factors that must be taken into consideration in the design and implementation of all analyzer applications.

Chapter 1 provides general information to be considered in the design of analyzer systems.

Chapter 2 describes the requirement for analyzer system data management.

Chapter 3 provides information on analyzer calibration and validation.

Chapter 4 provides an overview of analyzer sample system design considerations.

Chapter 5 describes the benefits of pre-packaging analyzer systems versus field construction methods.

Chapter 6 provides information on the installation and maintenance of analyzer systems.

Chapter 7 provides information on safety in the design of analyzer systems.

1 Analyzer Selection Design Requirements

1.1 Economic Considerations

Analyzer systems can improve product quality, increase the yields of products with higher economic value, increase product throughput and output, and reduce energy costs.

Process analyzer systems should be considered for product quality control when frequent and rapid measurements are required because of fast and substantial variations in process stream quality.

If an analyzer system is to be installed to improve operational efficiency of a process unit, the installation should be justifiable from an economic standpoint. Increased profit from improved efficiency combined with decrease in off-spec material produced must be weighed against the cost of installing, operating, and maintaining the system.
