

Australian Standard 1352, Part 2—1983

FIXED RESISTORS FOR USE IN ELECTRONIC EQUIPMENT Part 2—FIXED LOW-POWER NON-WIREWOUND RESISTORS

STANDARDS ASSOCIATION OF AUSTRALIA

Incorporated by Royal Charter

This Australian standard was prepared by Committee TE/2, Resistors and Capacitors, assisted by Committee ET/4/1, Quality Assessment System for Electronic Components Technical Coordinating Subcommittee. It was approved on behalf of the Council of the Standards Association of Australia on 24 June 1983 and published on 7 October 1983.

The following interests are represented on Committees TE/2 and ET/4/1:

Australian Electronics Industry Association
Confederation of Australian Industry
Department of Defence
Department of Science and Technology
Institution of Radio and Electronics Engineers, Australia
Telecom Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all SAA publications will be found in the Annual List of Australian Standards; this information is supplemented each month by SAA's journal 'The Australian Standard', which subscribing members receive, and which provides details of new publications, new editions and amendments, and of withdrawn standards.

Suggestions for improvements to Australian standards, addressed to the head office of the Association, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This standard was issued in draft form for comment as DR 77061.

PREFACE

This standard was prepared by the Association's Committee on Capacitors and Resistors as a sectional specification for use in the qualification of fixed low-power non-wirewound resistors, according to the requirements of the International Electrotechnical Commission's Quality Assessment System for Electronic Components (IECQ). It supersedes AS C344—1963, Fixed Carbon Composition Resistors (Type II, Normal Stability).

The standard is identical with and is reproduced from IEC 115-2:1982 issued by the International Electrotechnical Commission. Acknowledgement is made of the assistance received from this source.

The purpose of the standard is to establish standard ratings and characteristics for fixed low-power non-wirewound resistors, to select from AS 1352, Part 1, the appropriate methods of test and to give general performance requirements for this category of resistor. It applies only to resistors with a dissipation of 4 W or less for use in electronic equipment.

Detailed specifications for particular types of low-power non-wirewound resistors which are based on this standard may contain additional or more severe requirements but should not omit or diminish any relevant severity or requirement.

For the purpose of this Australian standard the text of IEC 115-2 used here should be modified as follows:

- (a) *Terminology*: The words 'Australian Standard' should be understood to replace the words 'International Standard' wherever they appear.
- (b) *Cross-references*: The references to international standard should be replaced by references to equivalent Australian standards as follows:

<i>References to International Standards</i>	<i>Equivalent Australian Standards</i>
IEC 63 Preferred Number Series for Resistors and Capacitors	AS 2063 Preferred Number Series for Resistors and Capacitors
IEC 68 Basic Environmental Testing Procedures	AS 1099 Basic Environmental Testing Procedures for Electrotechnology

Australian Standard

FIXED RESISTORS FOR USE IN ELECTRONIC EQUIPMENT

PART 2—SECTIONAL SPECIFICATION—FIXED LOW-POWER NON-WIREWOUND RESISTORS

SECTION ONE — GENERAL

1. General

1.1 Scope

This standard applies to fixed low-power non-wirewound resistors with a dissipation of 4 W or less for use in electronic equipment.

1.2 Object

The object of this standard is to prescribe preferred ratings and characteristics and to select from IEC Publication 115-1 (1982), the appropriate quality assessment procedures, tests and measuring methods and to give general performance requirements for this type of resistor.

Test severities and requirements prescribed in detail specifications referring to this sectional specification shall be of equal or higher performance level, because lower performance levels are not permitted.
