

Australian Standard™

Cranes (including hoists and winches)

Part 4: Tower cranes

This Australian Standard was prepared by Committee ME-005, Cranes. It was approved on behalf of the Council of Standards Australia on 8 June 2001 and published on 17 July 2001.

The following interests are represented on Committee ME-005:

Association of Consulting Engineers Australia
Australian Chamber of Commerce and Industry
Australian Elevator Association
Australian Industry Group
Australian Institute for Non-destructive Testing
Bureau of Steel Manufacturers of Australia
Construction and Mining Equipment Association of Australia
Crane Industry Council of Australia
Department of Administrative and Information Services (South Australia)
Department of Employment Training and Industrial Relations (Queensland)
Department of Infrastructure, Energy and Resources (Tasmania)
Department of Labour New Zealand
Institution of Engineers Australia
State Chamber of Commerce
University of New South Wales
Victorian WorkCover Authority
WorkCover New South Wales
WorkSafe Western Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee ME-005, Cranes.

The objective of this Standard is to provide nationally uniform requirements for the design of tower cranes for reference by importers, designers, users, and regulators.

Cognizance has been taken of the development of Standards for tower cranes as undertaken by the International Standards Technical Committee ISO/TC96/SC7, Tower Cranes, at the time of developing this Standard.

Considerations for loads and load factors are based on ISO 8686-3, *Cranes, Design principles and load combinations*, Part 3: *Tower cranes*.

The term 'informative' has been used in this Standard to define the appendix to which it applies. An 'informative' appendix is for information and guidance only.

SECTION 7 MARKING AND MANUAL	
7.1 MARKING ON CRANE.....	28
7.2 MARKING OF ACCESS AND SERVICE ISOLATORS.....	28
7.3 MANUAL.....	28
SECTION 8 INSPECTION AND TESTING	
8.1 INSPECTION.....	30
8.2 OPERATION TESTS.....	30
APPENDICES	
A INFORMATION TO BE SUPPLIED WITH AN ENQUIRY OR ORDER.....	31
B INFORMATION TO BE SUPPLIED BY THE MANUFACTURER.....	33
C TYPICAL ILLUSTRATIONS OF TOWER CRANES.....	36
D TYPICAL GROUP CLASSIFICATIONS OF THE TOWER CRANE AS A WHOLE.....	41
E TYPICAL GROUP CLASSIFICATIONS OF THE MECHANISMS OF TOWER CRANES.....	42

STANDARDS AUSTRALIA

Australian Standard
Cranes (including hoists and winches)

Part 4: Tower cranes

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE

This Standard sets out requirements for —

- (a) power-driven tower cranes that are dismantled when they have served their purpose; and
- (b) tower cranes of the permanently erected type, as defined in AS 2549.

Horizontal jib and luffing jib and boom cranes are included, and the cranes may be of the travelling, fixed, or climbing type.

Power-driven mobile cranes fitted with tower crane configurations are excluded except for the stability and foundation considerations when used to the capacity of a tower crane.

The Standard covers requirements from and including the hook to the anchorages of the tower crane as well as requirements for rail-mounted types.

NOTES:

- 1 Guidance on information to be supplied with an enquiry or order is given in Appendix A.
- 2 Guidance on information to be supplied by the manufacturer is given in Appendix B.
- 3 Guidance on selection and operation of tower cranes is given in AS 2550.4.

1.2 NEW DESIGNS AND INNOVATIONS

This Standard does not preclude the use of materials, designs, methods of assembly, procedures and the like which do not comply with a specific requirement of this Standard, or are not mentioned in it, but which can be shown to give equivalent or superior results to those specified.

NOTE: This Standard does not provide specific guidance on the limit state design methods, as the necessary dynamic factors have not been formulated for the complex forces cranes are subjected to. This is a worldwide situation and the International Standards Organisation (ISO) has established a working group specifically to resolve the issue. Design of structural members by limit state methods, including determination of the partial load factors for individual loads, should comply with the appropriate Australian Standard, e.g., AS 1664.1 for aluminium members and AS 4100 for steel members.

1.3 APPLICATION

This Standard applies to tower cranes used in building construction sites, works of engineering construction, dockside and ship-building.

This Standard covers specific requirements for tower cranes and is intended for use in conjunction with AS 1418.1; however, requirements given herein take precedence over corresponding requirements of that Standard.
