AS 1576.5:2021

This Australian Standard® was prepared by BD-036, Scaffolding. It was approved on behalf of the Council of Standards Australia on 24 June 2021.

This Standard was published on 30 June 2021.

The following are represented on Committee BD-036:

- Australian Aluminium Council
- Australian Chamber of Commerce and Industry
- Australian Council of Trade Unions (ACTU)
- Australian Industry Group
- Australian Steel Institute
- Better Regulation Division (NSW)
- Engineered Wood Products Association of Australasia
- Engineers Australia
- Hire and Rental Industry Association of Australia
- Housing Industry Association
- Master Builders Australia
- Victorian WorkCover Authority (WorkSafe Victoria)
- Workplace Health and Safety Queensland

This Standard was issued in draft form for comment as DR AS 1576.5:2020.

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee BD-036, Scaffolding, to supersede AS/NZS 1576.5:1995, *Scaffolding, Part 5: Prefabricated splitheads and trestles*.

After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide requirements for the design and operational performance of trestle scaffolds and trestle ladder scaffolds.

This edition includes the following technical changes from the previous edition:

- (a) Splitheads have been removed.
- (b) Design, operational and testing requirements for trestle ladder scaffolds have been included.
- (c) Special duty rating and associated minimum width of working platform for trestle scaffolds has been deleted.
- (d) Additional test procedures have been included in normative appendices.

The terms “normative” and “informative” are used in Standards to define the application of the appendices to which they apply. A “normative” appendix is an integral part of a Standard, whereas an “informative” appendix is only for information and guidance.

Contents

Preface	ii
Section 1 Scope and general	1
1.1 Scope.....	1
1.2 Normative references.....	1
1.3 Definitions.....	1
1.4 Marking requirements for trestles and trestle ladders.....	4
1.5 Product information.....	4
1.5.1 Documented information.....	4
1.5.2 Labelled information.....	5
1.6 Alternative design methods and materials.....	5
Section 2 Design requirements	6
2.1 General.....	6
2.2 Duty live loadings.....	6
2.3 Materials.....	6
2.3.1 Trestles.....	6
2.3.2 Trestle ladders.....	6
2.3.3 Decking components.....	6
2.3.4 Edge protection.....	6
Section 3 Operational requirements	7
3.1 Supporting structure.....	7
3.2 Slope of working platforms.....	7
3.3 Trestle scaffolds.....	7
3.3.1 Platform height.....	7
3.3.2 Height adjustment.....	7
3.3.3 Working platforms.....	7
3.3.4 Access to the working platform.....	8
3.3.5 Edge protection.....	8
3.4 Trestle ladder scaffolds.....	8
3.4.1 Trestle ladders.....	8
3.4.2 Working Platform.....	8
3.4.3 Access.....	9
3.4.4 Edge protection.....	9
3.4.5 Deflection.....	9
Section 4 Performance requirements	10
4.1 General.....	10
4.2 Testing.....	10
4.2.1 General.....	10
4.2.2 Testing requirements.....	10
Appendix A (normative) Trestle scaffold strength test	12
Appendix B (normative) Trestle scaffold stiffness test	16
Appendix C (normative) Trestle scaffold lateral stability test	20
Appendix D (normative) Trestle scaffold edge protection tests	22
Appendix E (normative) Plank sliding test	28
Appendix F (normative) Trestle ladder plank stiffness test	30
Appendix G (normative) Trestle ladder scaffold lateral stability test	32
Appendix H (normative) Trestle ladder scaffold edge protection tests for guardrails, midrails and bottom rails	36
Appendix I (normative) Trestle ladder scaffold edge protection test for guardrail end post	43
Appendix J (normative) Test reports	47

Australian Standard®

Scaffolding

Part 5: Prefabricated trestle and trestle ladder scaffolds

Section 1 Scope and general

1.1 Scope

This Standard specifies requirements for scaffolds that are assembled from prefabricated trestles or trestle ladders.

NOTE Design and testing of trestle ladders is covered by AS 1892.1 and such requirements are outside the scope of this Standard.

1.2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes a requirement of this document:

AS/NZS 1576.1, *Scaffolding, Part 1: General requirements*

AS/NZS 1576.2, *Scaffolding, Part 2: Couplers and accessories*

AS/NZS 1577, *Scaffold decking components*

AS 1892.1, *Portable ladders, Part 1: Performance and geometric requirements*

1.3 Definitions

For the purpose of this Standard the definitions given in AS/NZS 1576.1 and those below apply.

1.3.1

bottom rail

lowest rail in guardrailing

1.3.2

clamping device

device which interconnects scaffold planks at intervals along their length to limit differential deflection between adjacent scaffold planks

1.3.3

counterweight

weight or series of weights used to counterbalance the forces on the trestle ladder scaffold against overturning

1.3.4

frame trestle

self-supporting stand other than a trestle ladder incorporating one or more beams and designed to support a working platform

Note 1 to entry: Frame trestles provide a platform height that may be fixed or varied.

Note 2 to entry: Base arrangements for frame trestles may be of a fixed configuration, or may be folded or swivelled to aid storage, handling and transit.

Note 3 to entry: For a typical frame trestle, see [Figure 1.1\(a\)](#).
