

Australian Standard™

**Recommended practice for chemical
analysis by atomic absorption
spectrometry**

**Part 1: Flame atomic absorption
spectrometry**

This Australian Standard was prepared by Committee CH/16, Spectroscopy. It was approved on behalf of the Council of Standards Australia on 29 October 1999 and published on 5 December 1999.

The following interests are represented on Committee CH/16:

Australian Chamber of Commerce and Industry
CSIRO Energy Technology
CSIRO Manufacturing Science and Technology
Department of Defence (Australia)
Department of Natural Resources, Qld
National Association of Testing Authorities, Australia
Queensland Health Scientific Services

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for the improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, PO Box 1055, Strathfield, NSW 2135.

RECONFIRMATION

OF

AS 2134.1—1999

**Recommended practice for chemical analysis by atomic absorption spectrometry
Part 1: Flame atomic absorption spectrometry**

RECONFIRMATION NOTICE

Technical Committee CH-016 has reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 05 October 2016.

The following are represented on Technical Committee CH-016:

Australian Institute of Physics
Environmental Laboratory Industry Group
National Association of Testing Authorities Australia
National Measurement Institute

PREFACE

This Standard was prepared by the Standards Australia Committee CH/16, Spectroscopy, to supersede AS 2134.1—1988.

This Standard will be Part 1 of a series comprising:

AS

2134 Recommended practice for chemical analysis by atomic absorption spectrometry

2134.1 Part 1: Flame atomic absorption spectrometry

2134.2 Part 2: Graphite furnace atomic absorption spectrometry

2134.3 Part 3: Vapour generation atomic absorption spectrometry

The objective of this Standard is to set out recommended practices for the operation of flame atomic absorption spectrometers used in chemical analysis. The Standard includes a description of instrumentation, optimization procedures, calibration, test procedure and information on factors affecting atomic absorption. A section on analytical quality assurance has been added to the Standard.

STANDARDS AUSTRALIA

Australian Standard

Recommended practice for chemical analysis by atomic absorption spectrometry

Part 1: Flame atomic absorption spectrometry

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE This Standard sets out recommendations for instrumentation and operating techniques suitable for chemical analysis by flame atomic absorption spectrometry (FAAS) and includes a summary of testing procedures and recommendations for safe operation.

NOTES:

- 1 Graphite furnace atomization and vapour generation techniques are dealt with in Parts 2 and 3 of the AS 2134 series of Standards.
- 2 This Standard should be read in conjunction with the instrument manufacturer's recommendations.
- 3 A flowsheet on the procedure for the acceptance of analytical results for test samples is given in Appendix A.

1.2 PRINCIPLE Flame atomic absorption spectrometry (FAAS) relies upon—

- (a) heating a sample sufficiently to produce free atoms;
- (b) free atoms of an element being able to absorb energy only at certain discrete wavelengths (usually resonance wavelengths; refer Appendix B); and
- (c) the energy absorbed being a function of the concentration of the absorbing atoms.

The technique described in this Standard involves nebulizing a solution of the sample into a flame and measuring the absorption of energy at a specified wavelength. The apparatus is so designed that the absorption measurement is independent of any radiation emitted by the flame.

1.3 REFERENCED DOCUMENTS The documents below are referred to in this Standard:

AS

| | |
|--------|--|
| 1674 | Safety in welding and allied processes |
| 1674.1 | Part 1: Fire precautions |
| 1940 | The storage and handling of flammable and combustible liquids |
| 2134 | Recommended practice for chemical analysis by atomic absorption spectrometry |
| 2134.2 | Part 2: Graphite furnace spectrometry |
| 2134.3 | Part 3: Vapour generation atomic absorption spectrometry |
| 2162 | Verification and use of volumetric apparatus |
| 2162.1 | Part 1: General—Volumetric glassware |
