

Australian Standard[®]

**Space heating appliances—
Secondary guards**

This Australian Standard was prepared by Committee CS/7, Guards for Heating Appliances. It was approved on behalf of the Council of Standards Australia on 20 February 1989 and published on 14 July 1989.

The following interests are represented on Committee CS/7:

Australian Consumers Association
Australian Federation of Consumer Organizations
Australian Fire Protection Association
Australian Gas Association
Australian Solid Fuel and Wood Heating Association
Confederation of Australian Industry
Department of Business and Consumer Affairs, N.S.W.
Gas Appliance Manufacturers Association of Australia
Health Department, Vic.
Heat Electric Trade Association
National Safety Council of Australia
Royal Australasian College of Surgeons

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 87039.

PREFACE

This Standard was prepared by Standards Australia's Committee on Guards for Heating Appliances, to supersede AS 2286—1979, *Secondary guards for domestic heating appliances*.

In preparing this Standard, the committee considered the following documents:

BSI PD 6504—1983 *Medical information on human reaction to skin contact with hot surfaces*

BSI PD 6516—1987 *Guide to guarding fires and heating appliances*

AG 103 *Approval requirements for gas space heating appliances equipped with natural draught combustion system*

There are two levels of guarding, viz primary and secondary. This Standard covers the requirements for secondary guards; the requirements for primary guards are specified in AS 2285, *Space heating appliances—External temperature limits and primary guards*.

This edition includes changes as follows:

- (a) Clause 1.1—the Scope Clause has been expanded.
- (b) Clause 1.2—the definitions have been clarified.
- (c) Clause 2.1—a new design requirement for the secondary guard is specified.

Totally comprehensive protection against unforeseen circumstances is not possible; guards are designed for specific types of protection in particular circumstances which may not be appropriate for other hazards.

Failure to attach the guard in accordance with the manufacturer's instructions (see Clause 3.2) or attachment to unsound surfaces can result in a significant loss of protection.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

STANDARDS AUSTRALIA

Australian Standard

Space heating appliances—Secondary guards

SECTION 1. SCOPE AND GENERAL

1.1 SCOPE. This Standard specifies requirements for secondary guards intended to minimize the risk of burns to persons, but particularly to young children and the infirm, by preventing contact with hot surfaces of domestic heating appliances intended for comfort space heating.

This Standard does not specify guarding for open solid fuel fire places.

1.2 REFERENCED DOCUMENTS. The following documents are referred to in this Standard:

AS
2285 Space heating appliances—External temperature limits and primary guards

3100 Approval and test specification for definitions and general requirements for electrical materials and equipment

1.3 DEFINITIONS. For the purpose of this Standard, the definitions below apply.

1.3.1 Appliance—a fixed, mobile, or portable space heating device including any exposed flue or similar

attachment, designed for the purpose of heating a room or space by the emission of heat by conduction, radiation, convection, forced air circulation, or any combination thereof, operating on electricity, gas, liquid, solid fuel, or heat transfer medium.

1.3.2 Primary guard—a guard supplied integral with an appliance and intended to prevent direct contact with, or close approach to heat source(s).

NOTE: A primary guard is principally intended to reduce the risk of accidental ignition of flammable materials; however, if personal contact occurs, it does not necessarily prevent accidental burning.

1.3.3 Secondary guard—a guard supplied integral with or separate from an appliance, intended to prevent deliberate or accidental contact with any surfaces which are at such a temperature as would cause thermal damage to body tissue.

NOTE: A secondary guard is for use in situations where young children or the infirm may be at risk. A child may not recognize the danger of a hot surface and could remain in contact with it sufficient time to inflict severe tissue damage. An infirm person may fall against such a surface and be unable to move away, thus suffering severe tissue damage.
