

AS 2560, Part 1—1982

Australian Standard<sup>®</sup>

---

**GUIDE TO SPORTS LIGHTING**

**Part 1—GENERAL PRINCIPLES**

---

This Australian standard was prepared by Committee LG/9, Sports Lighting. It was approved on behalf of the Council of the Standards Association of Australia on 7 June 1982 and published on 6 September 1982.

---

The following interests were represented on the committee responsible for the preparation of this standard:

Australian Council of Local Government Engineers Associations  
Australian Electrical and Electronic Manufacturers Association  
Confederation of Australian Industry  
Department of Sport, Qld  
Department of Sport and Recreation, N.S.W.  
Department of Youth, Sport and Recreation, Vic.  
Electricity Supply Association of Australia  
Illuminating Engineering Societies of Australia  
Recreation and Sport Office, S.A.  
Royal Australian Institute of Architects  
Royal Australian Institute of Parks and Recreation

---

**Review of Australian Standards.** To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

## PREFACE

This standard was prepared by the Association's Committee on Sports Lighting. Request for preparation of the standard came from the Illuminating Engineering Societies of Australia as a consequence of a national conference at which many organizations with an interest in sports lighting were represented.

The complete standard is in two main parts: Part 1 which outlines general principles and recommendations for the lighting of places, both indoors and outdoors, where sport is played; and Part 2 which is a collection of separately issued sections, setting out specific recommendations for the lighting of individual sports or sporting venues.

A section of Part 2 dealing with lighting for outdoor tennis has been published as AS 2560, Part 2.1. Other sections of Part 2 covering the lighting of sports halls, lighting for football (all codes), and lighting for netball and basketball are in course of preparation.

The committee has decided that the standard should not embrace lighting requirements for television broadcasting, in view of the fact that specialist advice is normally required for such installations and that, in any event, there are international recommendations\* on this subject.

In the preparation of this standard, reference was made to the following publications:

IES Lighting Guide—Sports, Publication No 7 (1974), The Illuminating Engineering Society, London.

IES RP-6, Current Recommended Practice for Sports Lighting, The Illuminating Engineering Society, New York.

Various sports lighting recommendations published by the International Commission on Illumination (CIE), Paris.

Acknowledgement is made of the assistance derived from the above-mentioned publications.

---

\* CIE Publication No 28, The Lighting of Sports Events for Color Television Broadcasting, published by the International Commission on Illumination (CIE).

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

<b>SECTION 3. LIGHTING EQUIPMENT</b>	
3.1 Lamps .....	11
3.2 Luminaires .....	11
3.3 Compliance With Relevant Standards and Regulations .....	12
<b>SECTION 4. ASSESSMENT AND MEASUREMENT OF SPORTS LIGHTING INSTALLATIONS</b>	
4.1 General .....	14
4.2 Assessment of Installations .....	14
<b>APPENDICES</b>	
A Classification of Floodlights .....	15
B Maintenance of Outdoor Lighting Equipment .....	18
C Recommended Method of Measuring Average Illuminance and Uniformity for Indoor and Outdoor Installations .....	20
D Estimation of the Relative Costs of Sports Lighting Installations .....	22

## STANDARDS ASSOCIATION OF AUSTRALIA

**Australian Standard**  
**GUIDE TO SPORTS LIGHTING**

**PART 1—GENERAL PRINCIPLES**

**SECTION 1. SCOPE AND GENERAL**

**1.1 SCOPE.** This standard sets out recommendations for the lighting of places, both indoors and outdoors, where sport is played. It includes general principles and recommendations for sports lighting, descriptions of suitable types of lighting equipment, and methods for the assessment of measurement of sports lighting installations.

This standard and AS 2560, Part 2 together cater for the requirements of different levels of play as appropriate for each sport, i.e. for recreational, training, club, national and international play. The recommendations provide for the visual requirements of both players and spectators, but specific recommendations for television coverage of sporting events are not included.

NOTE: AS 2560, Part 2 comprises a collection of separate Sections which provide specific recommendations for the lighting of individual sports or sporting venues. Each Section of AS 2560, Part 2 is intended to be read in conjunction with the general recommendations of this standard.

**1.2 APPLICATION.** In order that this standard may be properly applied, the lighting requirements of sports areas should be considered at the design and layout stage of the planning of such venues, in order that lighting equipment and supporting structures may be located so as to provide the required uniformity of illumination, and to minimize glare and obstruction to players and play respectively.

For each type of sport there are preferred locations for the mounting of lighting equipment which are related to the nature of the game, the direction of play and other factors. Early consultation between the architect (venue designer) and the lighting engineer is desirable to ensure provision is made for suitable locations and mountings for lighting equipment. A completely satisfactory installation is often difficult to achieve when limited by physical constraints which cannot be avoided if lighting is considered at the design stage.

**1.3 REFERENCE DOCUMENTS.** The following standards are referred to in this standard:

AS 1170	SAA Loading Code
AS 1250	SAA Steel Structures Code
AS 1580	Code of Practice for Interior Lighting and the Visual Environment
AS 1778	Preferred Dimensions for Lighting Columns and Bracket Arms
AS 1939	Classification of Degrees of Protection Provided by Enclosures for Electrical Equipment
AS 2293	Emergency Evacuation Lighting in Buildings Part 1—Installation Requirements Part 2—Maintenance Procedures
AS 3000	SAA Wiring Rules

AS 3137 Approval and Test Specification for Luminaires (Lighting Fittings)

**1.4 DEFINITIONS.** For the purpose of this standard, the following definitions apply.

**1.4.1 Quantities and Units of Light.**

**1.4.1.1 Luminous flux**—the light emitted by a light source or luminaire, or received by a surface, irrespective of the directions in which it is distributed. The unit is the lumen (lm).

**1.4.1.2 Luminous intensity** (of a light source in a given direction)—the luminous flux emitted by the source in an infinitesimal cone containing the given direction divided by the solid angle of that cone. The unit is the candela (cd).

**1.4.1.3 Illuminance**—the luminous flux incident on a surface per unit area. The unit is the lux (lx);  $1 \text{ lx} = 1 \text{ lm/m}^2$ . Symbol:  $E$ .

**1.4.1.4 Illumination**—the process of lighting an object.

**1.4.1.5 Service illuminance**—the mean illuminance throughout the life of a lighting installation averaged over a particular area.

NOTE: As explained in Clause 3.2.5, the illuminance from a given installation will decrease with time from several causes. The service value, defined as an average throughout life, will thus depend on the initial value, the rate of depreciation and the frequency of maintenance.

**1.4.1.6 Luminance** (at a point of a surface and in a given direction)—the luminous intensity per unit projected area of a surface; e.g. if a very small portion of a surface has a luminous intensity of 1 cd in a particular direction, and if the orthogonal projection (on a plane perpendicular to the given direction) of that portion has an area of  $A$ , the luminance in that direction is  $1/A$  candelas per unit area. The unit is the candela per square metre ( $\text{cd/m}^2$ ).

**1.4.1.7 Brightness (luminosity)**—the attribute of visual sensation according to which a surface appears to emit or reflect more or less light.

NOTE: This is a subjective effect which cannot be measured in absolute units, and the term should only be used to describe the appearance of a source or surface.

**1.4.2 Luminaires and Lighting Systems.**

**1.4.2.1 Luminaire**—apparatus (fixed or portable) which distributes, filters or transforms the light given by a lamp or lamps and which includes all the items necessary for fixing and protecting these lamps and for connecting them to the supply circuit. It does not include permanent parts of a building such as a ceiling or other structural element.
