Complete, filled transport packages— Methods of test

Method 4: Vertical impact test by dropping

PREFACE

This Standard was prepared by Standards Australia Committee PK-012, Physical Testing of Packages and Containers, to supersede AS 2582.4—1983, *Complete, filled transport packages—Methods of test, Part 4: Vertical impact test by dropping*.

This Standard is identical with, and has been reproduced from ISO 2248:1985, *Packaging—Complete, filled transport packages—Vertical impact test by dropping*.

As this publication has been reproduced from an International Standard, the following modifications apply:

- (a) Its number appears on the cover and title page while the International Standard number appears only on the cover.
- (b) In the source text, ‘this International Standard’ should read ‘this Australian Standard.’
- (c) Substitute a full point for a comma when referring to a decimal marker.

References to International Standards should be replaced by Australian Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian Standard</i>	
ISO		AS	
2206	Packaging—Complete, filled transport packages—Identification of parts when testing	2582	Complete, filled transport packages—Methods of test
		2582.1	Part 1: Identification of parts when testing
2233	Packaging—Complete, filled transport packages and unit loads—Conditioning for testing	2582.2	Part 2: Conditioning for testing
