Australian Standard®

**Information processing systems—
Data communications—Network
service definition**

**Supplement 1: Network layer
addressing**

STANDARDS AUSTRALIA

This Australian Standard was prepared by Committee IT/1, Information Systems—Interconnection. It was approved on behalf of the Council of Standards Australia on 21 September 1989 and published on 11 December 1989.

The following interests are represented on Committee IT/1:

AUSSAT

Australian Bankers' Association

Australian Bureau of Statistics

Australian Committee of Directors and Principals

Australian Computer Society

Australian Information Industry Association

Australian Vice Chancellors Committee

Confederation of Australian Industry

CSIRO

Department of Defence

Information Exchange Steering Committee

Life Insurance Federation of Australia

OTC

Telecom Australia

Additional interests participating in preparation of Standard:

Computer consultant

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

Data communications—Network
service definition**

**Supplement to Network layer
addressing**

First published as AS 2994 Supp1—1989.

PREFACE

This Standard was prepared by Standards Australia's Committee on Information Processing Systems. It is identical with and has been reproduced from International Standard ISO 8348:1987, Add.2:1988.

The Standard is one of a series of Open Systems Interconnection (OSI) Standards which are currently under development. Since OSI Standards are developmental, there may be some minor difficulties encountered in their implementation. For this reason, Standards Australia will be providing a limited interpretation service to coordinate and disseminate information concerning difficulties which are identified in using this Standard.

For the purpose of this Australian Standard, the text of the ISO Standard given herein should be modified as follows:

- (a) *Terminology.* The words 'Australian Standard' should replace the words 'International Standard' wherever they appear.
- (b) *References.* The references to International Standards should be replaced by references to Australian Standards as follows:

<i>Reference to International Standard</i>	<i>Australian Standard</i>

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the Head Office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

Information processing systems—Data communications—Network service definition

Supplement 1: Network layer addressing

0 Introduction

This addendum to ISO 8348 defines the abstract syntax and semantics of the Network address (Network service access point address). The Network address is the address that appears in the primitives of the connection-mode Network service as the *calling address*, *called address*, and *responding address* parameters, and in the primitives of the connectionless-mode Network service as the *source address* and *destination address* parameters.

1 Scope and field of application

The scope of this addendum is the definition of the abstract syntax and semantics of the Network address. This addendum does not specify the way in which the semantics of the Network address are encoded in Network layer protocols. The field of application of this addendum is the same as the field of application of ISO 8348.

3 Definitions

3.1 Reference model definition

This addendum makes use of the following terms defined in ISO 7498. Terms that are defined in ISO 7498 using the generic prefix "(N)-" appear in this addendum with the layer-specific prefix "Network-".

- a) (N)-layer
- b) (N)-semantic
- c) (N)-service-access-point
- d) (N)-service-access-point-address
- e) (N)-entity
- f) routing
- g) (N)-address
- h) (N)-protocol-control-information
- i) (N)-protocol-data-unit
- j) OSI environment
- k) title
- l) (N)-relay

3.2 Service conventions definitions

This addendum makes use of the following terms defined in ISO/TR 8509.

- a) service user
- b) service provider
- c) service primitive
- d) indication (primitive)

3.3 Network layer architecture definitions

This addendum makes use of the following terms defined in ISO 8648.

- a) subnetwork
- b) real subnetwork
