

Australian Standard™

**Lighting booths for visual assessment
of colour and colour matching**

STANDARDS
Australia

This Australian Standard was prepared by Committee CH-003, Paints and Related Materials. It was approved on behalf of the Council of Standards Australia on 14 February 2006.

This Standard was published on 13 March 2006.

The following are represented on Committee CH-003:

AUSTROADS

Australian Paint Approval Scheme

Australian Paint Manufacturers' Federation

Building Research Association of New Zealand

Business New Zealand

Institution of Professional Engineers New Zealand

Master Painters New Zealand Association

National Association of Testing Authorities Australia

New Zealand Abrasive Blasting Association

Surface Coatings Association Australia

Telstra Corporation

Water Corporation Western Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to the Chief Executive, Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared for the Joint Australia/New Zealand Standards Committee CH-003, Paints and Related Materials by the Subcommittee CH-003-09, Methods of Colour Measurement to supersede AS 4004—1992. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand.

The objective of this Standard is to specify the requirements for light booths intended for the assessment of colour in accordance with AS 1580.601.1, *Paints and related materials—Methods of test*, Method 601.1: *Colour—Visual comparison*.

The term ‘normative’ has been used in this Standard to define the application of the appendix to which it applies. A ‘normative’ appendix is an integral part of a Standard.

FOREWORD

The lighting booth category adopted in this Standard is based on the performance of a colour matching booth as a simulator of standard daylight.

The performance as a daylight simulator is measured using the technique described in CIE 51.2 *A method for assessing the quality of daylight simulators for colorimetry*.

This technique requires the measurement of the spectral power distribution inside the booth using a spectroradiometer. This data is then used with the reflectance factors of five metameric colour pairs which match exactly under D_{65} , to calculate the colour difference of each pair under the test illuminant. The nearer the colour differences approach zero, the more accurate is the test illuminant simulation of standard D_{65} daylight. The results provide a means of classifying the quality of simulation into one of four categories.

Such testing is performed using equipment not normally available to a booth user and it is expected that the booth manufacturer will supply the results of such tests. The remaining specifications can be assessed and monitored by the user with simple equipment which measures the intensity and uniformity of the light in the booth.

STANDARDS AUSTRALIA

Australian Standard**Lighting booths for visual assessment of colour and colour matching**

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE

This Standard sets out the colorimetric, photometric and physical requirements for lighting booths that provide an environment suitable for colour assessment and matching in accordance with AS 1580.601.1.

1.2 REFERENCED DOCUMENTS

The following documents are referred to in this Standard:

AS

1580 Paints and related materials—Methods of test
1580.601.1 Method 601.1: Colour—Visual comparator

1852 International electrotechnical vocabulary
1852.845 Chapter 845: Lighting

2700 Colour Standards for general purposes

AS/NZS

1680 Interior and workplace lighting
1680.1 Part 1: General principles and recommendations

3100 Approval and test specification—General requirements for electrical equipment

CIE

51.2 A method for assessing the quality of daylight simulators for colorimetry

1.3 DEFINITIONS

For the purpose of this Standard, the definitions contained in AS/NZS 1680.1, AS 1852.845, CIE 51.2 and those below apply.

1.3.1 Viewing area

The area within the booth which is intended for the assessment of colour and colour match requirements, the size and location of which is specified by the manufacturer of the booth.

1.3.2 Simulator

The combination of light source, diffuser and associated filters installed in the booth.

1.4 MARKING

The following information shall be legibly and permanently attached to the light booth.

- (a) The manufacturer's name, trade name or mark.
- (b) The words 'Booth Category', the appropriate booth category (see CIE 51.2) and the colorimetric method used, e.g., Booth Category CD (CIELAB).
