This Australian Standard was prepared by the Standing Committee on Agriculture and Resource Management (SCARM) on behalf of the Agriculture and Resource Management Council of Australia and New Zealand (ARMCANZ). It has been adopted by Standards Australia under an accreditation arrangement with ARMCANZ. This Australian Standard was approved on behalf of the Council of Standards Australia on 23 January 1998. It was published on 5 April 1998.

Copyright of this Australian Standard is held jointly by ARMCANZ and Standards Australia, with the intellectual property belonging to ARMCANZ.

© Copyright – Commonwealth of Australia and each of its States and Territories 1995

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

Review of Standards

To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up-to-date by the issue of amendments or new editions as necessary. It is important therefore that Standards' users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine *The Australian Standard*, which subscribing members receive, and which gives details of new publications, new editions and of withdrawn Standards.

Suggestions for improvements to this Standard, should be addressed to:

ARMCANZ Secretariat
Department of Primary Industries and Energy

PREFACE

The Agriculture and Resource Management Council of Australia and New Zealand (ARMCANZ) comprises the Australian Federal, State and Territory, and New Zealand Ministers responsible for agriculture, soil, water and rural adjustment policy issues.

In March 1995 the Ministerial Council determined that aspects of all existing national meat industry codes relevant to human health would be mandated by amendment of legislation in all States and Territories.

This decision was given effect by appointment of a Steering Group comprising Chairmen and Chief Executives of State and Territory meat hygiene authorities, the Australian Quarantine and Inspection Service, meat industry organisations, food safety technical advisers and the Australia New Zealand Food Authority.

The Steering Group commenced a fundamental review of existing Codes of Hygienic Practice to express mandatory national standards in outcome terms. The new Australian Standards provided for the implementation of quality assurance programs consistent with the *AS/NZS ISO 9000 (1994)* series. Process control shall be achieved through the application of Hazard Analysis Critical Control Point (HACCP) methodology as defined by the Codex Alimentarius Commission and will allow flexibility in techniques and facilities provided that standards relating to wholesomeness and safety have been met.

"The responsibility for production of safe and wholesome meat should be shared by industry and the controlling authority. The use of the HACCP approach and quality assurance systems reinforces this joint responsibility. The controlling authority will supervise and audit these arrangements to ensure compliance with requirements." (Codex Alimentarius Vol. 10 (1994))

This Standard is written in substantial compliance and consistency with *Codex Alimentarius* Volume 10. Minor technical variations reflect accepted Australian terminology or commercial industry practice, but with quality standards and performance criteria equivalent to those in the *Codex*.

Where an operator proposes a technique substantially different from those detailed in this Australian Standard the assessment of equivalence shall be determined by the ARMCANZ Meat Standards Committee. This Committee will establish the methodology for determining the equivalence of benchmarks or standards. The proposer of the alternative technique shall supply sufficient supporting information to validate the procedure to the relevant Controlling Authority who will advise the ARMCANZ Committee on Meat Industry Standards. The submission must include a HACCP plan which ensures that equivalence is maintained. Where the ARMCANZ Meat Standards Committee cannot reach agreement on the approval of an alternative technique the final decision shall be made by the Ministerial Council (ARMCANZ).

This publication has been approved on behalf of the Council of Standards Australia, as an Australian Standard. Other Standards in the series are:

- Construction of Premises Processing Meat for Human Consumption;*
- Construction of Premises Processing Animals for Human Consumption;*
- Hygienic Production of Meat for Human Consumption;*
- Hygienic Production of Game Meat for Human Consumption;*
- Hygienic Production of Rabbit Meat for Human Consumption;*
- Transportation of Meat for Human Consumption.*

AGRICULTURE AND RESOURCE MANAGEMENT COUNCIL OF AUSTRALIA AND NEW ZEALAND

The Agriculture and Resource Management Council of Australia and New Zealand (ARMCANZ) consists of the Australian Federal, State/Territory and New Zealand Ministers responsible for agriculture, soil, water (both rural and urban) and rural adjustment policy issues.

The objective of the Council is to develop integrated and sustainable agricultural and land and water management policies, strategies and practices for the benefit of the community.

The Council is supported by a permanent Standing Committee, the Standing Committee on Agriculture and Resource Management (SCARM). Membership of Standing Committee comprises relevant Departmental Heads/CEOs of Commonwealth/State/Territory and New Zealand agencies as well as representatives of the CSIRO and the Bureau of Meteorology.

1 SCOPE

This Standard applies to the production for human consumption of products derived from poultry. However, it does not apply to the retailing of poultry meat and poultry meat products.

It is designed to apply modern meat production and inspection procedures to the production of poultry meat. Its aim is to build quality into the product rather than to correct faults by inspection or accept a lower quality product than is practically achievable.

It is based on Hazard Analysis — Critical Control Point (HACCP) principles. Operators of poultry processing establishments should seek training in HACCP principles and then develop an establishment specific quality assurance manual based on HACCP meeting or exceeding the minimum requirements of this Standard.

For the purpose of understanding how HACCP is implemented and audited in the Australian meat industry, ARMCANZ has produced an accompanying document, *A Guide to the Implementation and Auditing of HACCP*.

Alternate techniques or procedures to those detailed in the Standard may be used by operators providing that compliance with the overall goal can be verified by the use of HACCP-based programs.

Whenever it appears in the contents of this Standard the word "should" is to be interpreted as meaning desirable. Whenever it appears in the contents of this Standard, the word "shall" is to be interpreted as meaning mandatory.

A draft Code of Practice for *The Hygienic Production and Inspection of Emu Meat for Human Consumption* which applies to the slaughter and processing of emus and ostriches is available upon request from the Western Australian Department of Agriculture.

This Standard applies as the *Australian Standard for the Hygienic Production of Poultry Meat for Human Consumption*.
