

Australian Standard™

AS 4878.2

Methods of test for coated fabrics

Method 2: Determination of length, width and net mass

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TX-005, Coated Fabrics as an Australian Standard.

The Standard is identical with and has been reproduced from ISO 2286-1:1998, *Rubber- or plastics-coated fabrics—Determination of roll characteristics, Part 1: Methods for determination of length, width and net mass*.

The objective of this Standard is to provide manufacturers and testing bodies with suitable methods for determination of the length, width and net mass of rubber- or plastic-coated fabrics.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text, 'this part of ISO 2286' should read 'this Australian Standard'.
- (b) A full point should be substituted for a comma when referring to a decimal marker.
