

Australian Standard™

**Essential oils—General guidance on
chromatographic profiles**

**Part 2: Utilization of chromatographic
profiles of samples of essential oils**

This Australian Standard was prepared by Committee CH-021, Essential Oils. It was approved on behalf of the Council of Standards Australia on 14 June 2002 and published on 27 June 2002.

The following are represented on Committee CH-021:

Australian Association of Certification Bodies
Australian Society of Cosmetic Chemists
Australian Society of Perfumers and Flavourists
Cosmetic Toiletry Fragrance Association of Australia
Consumers Federation of Australia
Essential Oil Producers Association
New South Wales Agriculture
Southern Cross University
The Royal Australian Chemical Institute
University of New South Wales
University of Tasmania

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia website at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee CH-021, Essential Oils. This Standard is identical with and has been reproduced from ISO 11024-2:1998, *Essential oils—General guidance on chromatographic profiles, Part 2: Utilization of chromatographic profiles of samples of essential oils*.

The objective of this Standard is to describe general guidelines on the determination of compliance of a chromatographic profile of a sample of essential oil under examination, with the reference chromatographic profile given in the Standard for that oil.

The chromatographic profile is one of the specifications, which enables assessment of the quality of an essential oil. It is not a determination of the true concentration of the component, it is only an evaluation of its relative proportion.

As this Standard is reproduced from an International Standard, the following applies:

- Its number appears on the cover and title page while the International Standard number appears only on the cover.
- In the source text, 'this International Standard' should read 'this Australian Standard.'
- A full point substitutes for a comma when referring to a decimal marker.
- Substitute 'mL' for 'ml' wherever it appears.
- In the example to Clause 3.1, *replace* 'citronnellal' with 'citronellal'.
- In Clause 7.2, Table 1, CAS and EINECS numbers of chiral compounds are inaccurate.

CAS and EINECS numbers given in Table 1 refer to specific enantiomers only which is not reflected in the chemical names, for example:

	CAS	EINECS
(+) – α – pinene	7785-70-8	232-087-8
(–) – α – pinene	7785-26-4	232-077-3
(\pm) – α – pinene	2437-95-8	

NOTE: The changes listed in items (e) and (f) are indicated in the text by a single marginal bar against the relevant clause or sub-clause or part thereof.

References to International Standards should be replaced by references to equivalent Australian Standards as follows:

<i>Reference International Standard</i>	<i>Australian Standard</i>
ISO	AS
7609 Essential oils—Analysis by gas chromatography on capillary columns—General method	5027 Essential oils—Analysis by gas chromatography on capillary columns—General method

The document ISO 356 listed as normative reference in Clause 2 has not been adopted as Australian Standard.

AUSTRALIAN STANDARD

Essential oils — General guidance on chromatographic profiles —**Part 2:****Utilization of chromatographic profiles of samples of essential oils****1 Scope**

This part of ISO 11024 describes general guidelines on the determination of the compliance of a chromatographic profile of a sample of essential oil under examination with the reference chromatographic profile given in the standard for that oil.

NOTE Refer also to ISO 11024-1¹⁾.

2 Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this part of ISO 11024. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this part of ISO 11024 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

ISO 356, *Essential oils — Preparation of test samples*.

ISO 7609, *Essential oils — Analysis by gas chromatography on capillary columns — General method*.

3 Terms and definitions

For the purposes of this part of ISO 11024, the following terms and definitions apply.

3.1**representative components**

components present in all of the samples of the essential oil involved, whether major or minor ones

EXAMPLE Geranyl formate, isomenthone, citronnellal, geraniol, etc. in the essential oil of geranium.

¹⁾ ISO 11024-1, *Essential oils — General guidance on chromatographic profiles — Part 1: Preparation of chromatographic profiles for presentation in standards*.
