

High-voltage switchgear and controlgear

Part 1: Common specifications for alternating current switchgear and controlgear (IEC 62271-1:2017, MOD)

STANDARDS
Australia

AS 62271.1:2019

This Australian Standard® was prepared by EL-007, Power Switchgear. It was approved on behalf of the Council of Standards Australia on 21 October 2019.

This Standard was published on 22 November 2019.

The following are represented on Committee EL-007:

Australian Industry Group
Energy Networks Australia
Engineers Australia
University of New South Wales

This Standard was issued in draft form for comment as DR AS IEC 62271.1:2019.

High-voltage switchgear and controlgear

Part 1: Common specifications for alternating current switchgear and controlgear (IEC 62271-1:2017, MOD)

Originates as AS 2650—1983.
Previous edition AS 2650—2005.
Revised and redesignated as AS 62271.1—2012.
Second edition 2019.

Preface

This Standard was prepared by the Standards Australia Committee EL-007, Power Switchgear, to supersede AS 62271.1—2012, *High-voltage switchgear and controlgear, Part 1: Common specifications*.

The objective of this Standard is to specify the applications of AC switchgear and controlgear designed for indoor and/or outdoor installation and for operation at service frequencies up to and including 60 Hz and having rated voltages above 1 000 V.

This document applies to all high-voltage switchgear and controlgear except as otherwise specified in the relevant IEC standards for the particular type of switchgear and controlgear.

NOTE For the use of this document, high-voltage is defined as the rated voltage above 1 000 V. However, the term medium voltage is commonly used for distribution systems with voltages above 1 kV and generally applied up to and including 52 kV.

This Standard is an adoption with national modifications, and has been reproduced from, IEC 62271-1:2017, *High-voltage switchgear and controlgear — Part 1: Common specifications for alternating current switchgear and controlgear*. The modifications are additional requirements and are set out in Appendix ZZ, which has been added at the end of the source text.

Appendix ZZ lists the variations to IEC 62271-1:2017 for the application of this standard in Australia.

As this document has been reproduced from an International Standard, the following applies:

- (a) In the source text “this part of IEC 62271” should read “this Australian Standard”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

CONTENTS

FOREWORD.....	8
INTRODUCTION.....	11
1 Scope.....	12
2 Normative references	12
3 Terms and definitions	14
3.1 General terms and definitions	15
3.2 Assemblies of switchgear and controlgear	18
3.3 Parts of assemblies	18
3.4 Switching devices	18
3.5 Parts of switchgear and controlgear	18
3.6 Operational characteristics of switchgear and controlgear.....	22
3.6.5 Terms and definitions relative to pressure (or density).....	23
3.6.6 Terms and definitions relating to gas and vacuum tightness	23
3.6.7 Terms and definitions relating to liquid tightness.....	25
3.7 Characteristic quantities	25
3.8 Index of definitions.....	26
4 Normal and special service conditions	28
4.1 Normal service conditions	28
4.1.1 General	28
4.1.2 Indoor switchgear and controlgear	28
4.1.3 Outdoor switchgear and controlgear	29
4.2 Special service conditions.....	29
4.2.1 General	29
4.2.2 Altitude	29
4.2.3 Exposure to pollution	30
4.2.4 Temperature and humidity	30
4.2.5 Exposure to abnormal vibrations, shock or tilting	30
4.2.6 Wind speed	31
4.2.7 Other parameters	31
5 Ratings.....	31
5.1 General.....	31
5.2 Rated voltage (U_r)	31
5.2.1 General	31
5.2.2 Range I for rated voltages of 245 kV and below	31
5.2.3 Range II for rated voltages above 245 kV	32
5.3 Rated insulation level (U_d , U_p , U_s).....	32
5.4 Rated frequency (f_r).....	36
5.5 Rated continuous current (I_r)	36
5.6 Rated short-time withstand current (I_k)	36
5.7 Rated peak withstand current (I_p)	37
5.8 Rated duration of short-circuit (t_k).....	37
5.9 Rated supply voltage of auxiliary and control circuits (U_a)	37
5.9.1 General	37
5.9.2 Rated supply voltage (U_a)	37
5.10 Rated supply frequency of auxiliary and control circuits	38
5.11 Rated pressure of compressed gas supply for controlled pressure systems	38

6	Design and construction	39
6.1	Requirements for liquids in switchgear and controlgear	39
6.2	Requirements for gases in switchgear and controlgear	39
6.3	Earthing of switchgear and controlgear	39
6.4	Auxiliary and control equipment and circuits	39
6.4.1	General	39
6.4.2	Protection against electric shock	40
6.4.3	Components installed in enclosures	40
6.5	Dependent power operation	43
6.6	Stored energy operation	43
6.6.1	General	43
6.6.2	Energy storage in gas receivers or hydraulic accumulators	44
6.6.3	Energy storage in springs (or weights)	44
6.6.4	Manual charging	44
6.6.5	Motor charging	44
6.6.6	Energy storage in capacitors	44
6.7	Independent unlatched operation (independent manual or power operation)	44
6.8	Manually operated actuators	45
6.9	Operation of releases	45
6.9.1	General	45
6.9.2	Shunt closing release	45
6.9.3	Shunt opening release	45
6.9.4	Capacitor operation of shunt releases	45
6.9.5	Under-voltage release	46
6.10	Pressure/level indication	46
6.10.1	Gas pressure	46
6.10.2	Liquid level	46
6.11	Nameplates	46
6.11.1	General	46
6.11.2	Application	46
6.12	Locking devices	48
6.13	Position indication	48
6.14	Degrees of protection provided by enclosures	48
6.14.1	General	48
6.14.2	Protection of persons against access to hazardous parts and protection of the equipment against ingress of solid foreign objects (IP coding)	48
6.14.3	Protection against ingress of water (IP coding)	48
6.14.4	Protection against mechanical impact under normal service conditions (IK coding)	48
6.15	Creepage distances for outdoor insulators	49
6.16	Gas and vacuum tightness	49
6.16.1	General	49
6.16.2	Controlled pressure systems for gas	49
6.16.3	Closed pressure systems for gas	49
6.16.4	Sealed pressure systems	50
6.17	Tightness for liquid systems	50
6.17.1	General	50
6.17.2	Leakage rates	50
6.18	Fire hazard (flammability)	50

6.19	Electromagnetic compatibility (EMC).....	50
6.20	X-ray emission.....	51
6.21	Corrosion.....	51
6.22	Filling levels for insulation, switching and/or operation.....	51
7	Type tests.....	51
7.1	General.....	51
7.1.1	Basics.....	51
7.1.2	Information for identification of test objects.....	51
7.1.3	Information to be included in type-test reports.....	52
7.2	Dielectric tests.....	52
7.2.1	General.....	52
7.2.2	Ambient air conditions during tests.....	52
7.2.3	Wet test procedure.....	53
7.2.4	Arrangement of the equipment.....	53
7.2.5	Criteria to pass the test.....	54
7.2.6	Application of the test voltage and test conditions.....	54
7.2.7	Tests of switchgear and controlgear of $U_T \leq 245$ kV.....	58
7.2.8	Tests of switchgear and controlgear of $U_T > 245$ kV.....	58
7.2.9	Artificial pollution tests for outdoor insulators.....	59
7.2.10	Partial discharge tests.....	59
7.2.11	Dielectric tests on auxiliary and control circuits.....	59
7.2.12	Voltage test as condition check.....	59
7.3	Radio interference voltage (RIV) test.....	60
7.4	Resistance measurement.....	60
7.4.1	Measurement of the resistance of auxiliary contacts class 1 and class 2.....	60
7.4.2	Measurement of the resistance of auxiliary contacts class 3.....	60
7.4.3	Electrical continuity of earthed metallic parts test.....	60
7.4.4	Resistance measurement of contacts and connections in the main circuit as a condition check.....	60
7.5	Continuous current tests.....	61
7.5.1	Condition of the test object.....	61
7.5.2	Arrangement of the equipment.....	61
7.5.3	Test current and duration.....	62
7.5.4	Temperature measurement during test.....	63
7.5.5	Resistance of the main circuit.....	64
7.5.6	Criteria to pass test.....	64
7.6	Short time withstand current and peak withstand current tests.....	68
7.6.1	General.....	68
7.6.2	Arrangement of the equipment and of the test circuit.....	68
7.6.3	Test current and duration.....	69
7.6.4	Conditions of the test object after test.....	70
7.7	Verification of the protection.....	70
7.7.1	Verification of the IP coding.....	70
7.7.2	Verification of the IK coding.....	70
7.8	Tightness tests.....	71
7.8.1	General.....	71
7.8.2	Controlled pressure systems for gas.....	72
7.8.3	Closed pressure systems for gas.....	72
7.8.4	Sealed pressure systems.....	73

INTERNATIONAL ELECTROTECHNICAL COMMISSION

HIGH-VOLTAGE SWITCHGEAR AND CONTROLGEAR –

Part 1: Common specifications for alternating current switchgear and controlgear

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62271-1 has been prepared by technical committee 17: High-voltage switchgear and controlgear.

This second edition cancels and replaces the first edition published in 2007 and Amendment 1:2011. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

New numbering in accordance with ISO/IEC directives, Part 2 (2016) and IEEE Std. C37.100.1.

- 4.1.2 a) The normal service condition for indoor switchgear is limited to one range of 40 °C to –5 °C.

- 4.1.3 a) The normal service condition for outdoor switchgear is limited to one range of 40 °C to –25 °C.
- 4.2.2: The specifications from IEC 60071-2:1996 are adopted for altitude correction factors above 1 000 m.
- 5.2.2: Range I, the rated voltage of 40,5 kV is added Series I Table 1; Table 2 and Table 4 are updated on recommendation of the US National Committee.
- 6.8: New subclause added for manual operated actuators consistent with “Man Machine Interface” recommendations of IEC 60447 [1] ¹.
- 7.2.6.1: Insert the wording regarding preliminary impulses across open vacuum interrupters according to the result of IEC 17/1026/RQ.
- 7.3: Changed the requirement for radio interference voltage to a rated voltage level of 245 kV and above, instead of 123 kV and above. This change is based on reported positive test and service experience of utility representatives in the maintenance team of this standard.
- 7.5.6, Table 14:
- a) Introduced the distinction of parts in “OG” (oxidizing gas) or in “NOG” (not oxidizing gas) replacing the former “air” and “SF₆”;
 - b) Increased the allowable temperature rise for some parts in groups 1 and 2 of Table 14 according to IEC TR 60943 [2];
 - c) Expanded the definition of allowable temperature rise for categories of accessible surfaces with reference to IEC Guide 117 [3]. See also point 15 in 7.5.6.2.
- 7.5.6.2: Point 5 is modified to clarify the introduction of “OG” and “NOG” gas.
- 7.10: Some tests were removed because the relevant test standards of IEC 60068 series were modified or withdrawn.
- 7.11.3: The acceptance criteria for X-radiation testing are modified to recognize higher rated vacuum interrupters.

Former informative Annex H: Corrosion is deleted, the content is part of IEC TR 62271-306 [4].

New Annex J (informative): Added informative guidelines for the extension of validity of type tests

New Annex K (informative): Added informative guidelines about exposure to pollution

The text of this International Standard is based on the following documents:

FDIS	Report on voting
17/1033/FDIS	17/1037/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The reader’s attention is drawn to the fact that Annex I lists all of the “in-some-country” clauses on differing practices of a less permanent nature relating to the subject of this standard.

¹ Numbers in square brackets refer to the Bibliography.

The list of all parts of the IEC 62271 series under the general title, *High-voltage switchgear and controlgear*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

In the preparation of this FDIS draft for the general revision of IEC 62271-1:2007 and IEC 62271-1:2007/AMD1:2011, the maintenance team was motivated by the following principles:

- Application of horizontal standards – such application is mandatory for product standards, (reference IEC Guide 108 [5]). A typical example is the application of IEC 60071 (all parts) dealing with insulation coordination.
- Application of the "principle of verifiability" – as defined in the Directives, Part 2, 5.5 (2016) "...Only those requirements which can be verified shall be included."
- Organizing information in the proper clause, e.g. terms and definitions in Clause 3, rated values in Clause 5. For example, the values of rated continuous current are specified in Clause 5 but the conditions of test and acceptance criteria (e.g. temperature rise limits) are moved to Clause 7.
- Normal service conditions in Clause 4 are unambiguous statements of conditions under which the switchgear and controlgear is expected to operate. For example: "Solar radiation does not exceed a level of 1 000 W/m²" rather than "Solar radiation up to a level of 1 000 W/m² should be considered".
- Ratings in Clause 5 have been limited to reflect the common specifications of the switchgear and controlgear that are specified by the user and are necessary for operation on the user's network. See the last paragraph of 5.1 for addition clarification.
- Statements or informative NOTES that reflect design guides (not requirements) or application (not standard requirements) are either removed or moved to Clause 9.
For example, the following former NOTE contains both a design guide and an application issue, neither of which belongs to normal service conditions:
"Under certain levels of solar radiation, appropriate measures, for example roofing, forced ventilation, test simulating solar gain, etc., may be necessary, or derating may be used, in order not to exceed the specified temperature rises and pressure rise limits".
- Specifications for design and construction in Clause 6 have been limited to requirements that can be verified by test or inspection.
- References to tests and procedures that relate to transportation, installation, commissioning and maintenance have been moved to Clause 11.
- Improve wording to minimize the possibility of miss-interpretation or conflicting interpretations of the specifications, methods or criteria.
- Elimination of hanging paragraphs and actual or potential circular references. Reference to ISO/IEC Directives, Part 2, 22.3.3 (2016).

As a result of the application of these principles or objectives, the FDIS draft includes more revisions that might otherwise be expected.

HIGH-VOLTAGE SWITCHGEAR AND CONTROLGEAR –

Part 1: Common specifications for alternating current switchgear and controlgear

1 Scope

This part of IEC 62271 applies to AC switchgear and controlgear designed for indoor and/or outdoor installation and for operation at service frequencies up to and including 60 Hz and having rated voltages above 1 000 V.

This document applies to all high-voltage switchgear and controlgear except as otherwise specified in the relevant IEC standards for the particular type of switchgear and controlgear.

NOTE For the use of this document, high-voltage is defined as the rated voltage above 1 000 V. However, the term medium voltage is commonly used for distribution systems with voltages above 1 kV and generally applied up to and including 52 kV.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
