AS ISO 22301:2020

This Australian Standard® was prepared by MB-025, Security and Resilience. It was approved on behalf of the Council of Standards Australia on 9 September 2020.

This Standard was published on 25 September 2020.

The following are represented on Committee MB-025:

Australian Emergency Management Institute
Australian Institute of Human Resources
Australian Local Government Association
Australian Risk Policy Institute
Australian Security Industry Association
Australian Strategic Policy Institute
Business Continuity Institute Australasia
Engineers Australia
International Association of Privacy Professionals, Australia and New Zealand
Office of the Victorian Information Commissioner
Risk and Insurance Management Society of Australasia
Risk Management Institute of Australasia
Security Professionals Australasia

This Standard was issued in draft form for comment as DR AS ISO 22301:2020.

Preface

This Standard was prepared by the Standards Australia Committee MB-025, Security and Resilience, to supersede AS ISO 22301:2017, *Societal security — Business continuity management systems — Requirements*.

The objective of this document is to specify requirements to implement, maintain and improve a management system to protect against, reduce the likelihood of the occurrence of, prepare for, respond to and recover from disruptions when they arise.

The requirements specified in this document are generic and intended to be applicable to all organizations, or parts thereof, regardless of type, size and nature of the organization. The extent of application of these requirements depends on the organization's operating environment and complexity.

This document is applicable to all types and sizes of organizations that —

- (a) implement, maintain and improve a business continuity management system (BCMS);
- (b) seek to ensure conformity with the stated business continuity policy;
- (c) need to be able to continue to deliver products and services at an acceptable predefined capacity during a disruption; and
- (d) seek to enhance their resilience through the effective application of the BCMS.

This document can be used to assess an organization's ability to meet its own business continuity needs and obligations.

This document is identical with, and has been reproduced from, ISO 22301:2019, *Security and resilience — Business continuity management systems — Requirements*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 292, *Security and resilience*.

This second edition cancels and replaces the first edition (ISO 22301:2012), which has been technically revised. The main changes compared with the previous edition are as follows:

- ISO's requirements for management system standards, which have evolved since 2012, have been applied;
- requirements have been clarified, with no new requirements added;
- discipline-specific business continuity requirements are now almost entirely within [Clause 8](#);
- [Clause 8](#) has been restructured to provide a clearer understanding of the key requirements;
- a number of discipline-specific business continuity terms have been modified to improve clarity and to reflect current thinking.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

0.1 General

This document specifies the structure and requirements for implementing and maintaining a business continuity management system (BCMS) that develops business continuity appropriate to the amount and type of impact that the organization may or may not accept following a disruption.

The outcomes of maintaining a BCMS are shaped by the organization's legal, regulatory, organizational and industry requirements, products and services provided, processes employed, size and structure of the organization, and the requirements of its interested parties.

A BCMS emphasizes the importance of:

- understanding the organization's needs and the necessity for establishing business continuity policies and objectives;
- operating and maintaining processes, capabilities and response structures for ensuring the organization will survive disruptions;
- monitoring and reviewing the performance and effectiveness of the BCMS;
- continual improvement based on qualitative and quantitative measures.

A BCMS, like any other management system, includes the following components:

- a) a policy;
- b) competent people with defined responsibilities;
- c) management processes relating to:
 - 1) policy;
 - 2) planning;
 - 3) implementation and operation;
 - 4) performance assessment;
 - 5) management review;
 - 6) continual improvement;
- d) documented information supporting operational control and enabling performance evaluation.

0.2 Benefits of a business continuity management system

The purpose of a BCMS is to prepare for, provide and maintain controls and capabilities for managing an organization's overall ability to continue to operate during disruptions. In achieving this, the organization is:

- a) from a business perspective:
 - 1) supporting its strategic objectives;
 - 2) creating a competitive advantage;
 - 3) protecting and enhancing its reputation and credibility;

- 4) contributing to organizational resilience;
- b) from a financial perspective:
 - 1) reducing legal and financial exposure;
 - 2) reducing direct and indirect costs of disruptions;
- c) from the perspective of interested parties:
 - 1) protecting life, property and the environment;
 - 2) considering the expectations of interested parties;
 - 3) providing confidence in the organization's ability to succeed;
- d) from an internal processes perspective:
 - 1) improving its capability to remain effective during disruptions;
 - 2) demonstrating proactive control of risks effectively and efficiently;
 - 3) addressing operational vulnerabilities.

0.3 Plan-Do-Check-Act (PDCA) cycle

This document applies the Plan (establish), Do (implement and operate), Check (monitor and review) and Act (maintain and improve) (PDCA) cycle to implement, maintain and continually improve the effectiveness of an organization's BCMS.

This ensures a degree of consistency with other management systems standards, such as ISO 9001, ISO 14001, ISO/IEC 20000-1, ISO/IEC 27001 and ISO 28000, thereby supporting consistent and integrated implementation and operation with related management systems.

In accordance with the PDCA cycle, [Clauses 4 to 10](#) cover the following components.

- [Clause 4](#) introduces the requirements necessary to establish the context of the BCMS applicable to the organization, as well as needed requirements and scope.
- [Clause 5](#) summarizes the requirements specific to top management's role in the BCMS, and how leadership articulates its expectations to the organization via a policy statement.
- [Clause 6](#) describes the requirements for establishing strategic objectives and guiding principles for the BCMS as a whole.
- [Clause 7](#) supports BCMS operations related to establishing competence and communication on a recurring/needed basis with interested parties, while documenting, controlling, maintaining and retaining required documented information.
- [Clause 8](#) defines business continuity needs, determines how to address them and develops procedures to manage the organization during a disruption.
- [Clause 9](#) summarizes the requirements necessary to measure business continuity performance, BCMS conformity with this document, and to conduct management review.
- [Clause 10](#) identifies and acts on BCMS nonconformity and continual improvement through corrective action.

0.5 Contents of this document

This document conforms to ISO's requirements for management system standards. These requirements include a high level structure, identical core text and common terms with core definitions, designed to benefit users implementing multiple ISO management system standards.

This document does not include requirements specific to other management systems, though its elements can be aligned or integrated with those of other management systems.

This document contains requirements that can be used by an organization to implement a BCMS and to assess conformity. An organization that wishes to demonstrate conformity to this document can do so by:

- making a self-determination and self-declaration; or
- seeking confirmation of its conformity by parties having an interest in the organization, such as customers; or
- seeking confirmation of its self-declaration by a party external to the organization; or
- seeking certification/registration of its BCMS by an external organization.

[Clauses 1](#) to [3](#) in this document set out the scope, normative references and terms and definitions that apply to the use of this document. [Clauses 4](#) to [10](#) contain the requirements to be used to assess conformity to this document.

In this document, the following verbal forms are used:

- a) “shall” indicates a requirement;
- b) “should” indicates a recommendation;
- c) “may” indicates a permission;
- d) “can” indicates a possibility or a capability.

Information marked as “NOTE” is for guidance in understanding or clarifying the associated requirement. “Notes to entry” used in [Clause 3](#) provide additional information that supplements the terminological data and can contain provisions relating to the use of a term.

Australian Standard[®]

Security and resilience — Business continuity management systems — Requirements

1 Scope

This document specifies requirements to implement, maintain and improve a management system to protect against, reduce the likelihood of the occurrence of, prepare for, respond to and recover from disruptions when they arise.

The requirements specified in this document are generic and intended to be applicable to all organizations, or parts thereof, regardless of type, size and nature of the organization. The extent of application of these requirements depends on the organization's operating environment and complexity.

This document is applicable to all types and sizes of organizations that:

- a) implement, maintain and improve a BCMS;
- b) seek to ensure conformity with stated business continuity policy;
- c) need to be able to continue to deliver products and services at an acceptable predefined capacity during a disruption;
- d) seek to enhance their resilience through the effective application of the BCMS.

This document can be used to assess an organization's ability to meet its own business continuity needs and obligations.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 22300, *Security and resilience — Vocabulary*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 22300 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

NOTE The terms and definitions given below supersede those given in ISO 22300:2018.

3.1 activity

set of one or more tasks with a defined output
