Recreational diving services — Requirements for recreational diving providers

currently in preview, click buy full version

AS ISO 24803:2021

This Australian Standard ® was prepared by CS-083, Recreational Underwater Diving. It was approved on behalf of the Council of Standards Australia on 09 August 2021.

This Standard was published on 20 August 2021.

The following are represented on Committee CS-083:

Association of Marine Park Tourism Operators, Qld

Australian Underwater Scuba Instructors

PADI Asia Pacific

RAID International

Scuba Schools International Australia

TDI/SDI Australia & New Zealand

This Standard was issued in draft form for comment as DR AS ISO 24803:2021.

Preface

This Standard was prepared by the Standards Australia Committee CS-083, Recreational Underwater Diving.

The objective of this document is to specify requirements for service providers in the field of recreational scuba diving and snorkelling excursions.

It specifies the following areas of service provision:

- (a) Introductory diving activities.
- (b) Snorkelling excursions.
- (c) Provision of training and education.
- (d) Organized and guided diving for qualified divers.
- (e) Rental of diving and snorkelling equipment.

Service providers can offer one or more of these services. This document specifies the nature and quality of the services to the client.

This document does not apply to freediving (also called “apnea diving”).

This document is identical with, and has been reproduced from, ISO 24803:2017, *Recreational diving services — Requirements for recreational diving providers*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 223, *Tourism and related services*.

This second edition cancels and replaces the first edition (ISO 24803:2007), which has been technically revised.

Introduction

Standardization is important for recreational activities, such as diving, for which training and experience are essential for the participants to be able to carry out the activity safely. Although recreational diving is potentially hazardous, the risks to the participants and to the natural and cultural resources of the dive sites can easily be reduced to acceptable levels by the adoption of appropriate precautions. Additionally, impacts to the marine environment, particularly fragile marine ecosystems such as coral reefs, can be reduced through proper education and training of scuba instructors, dive leaders and divers.

A service provider can offer diver training and education, guided dives and rental of diving equipment, snorkelling excursions, and courses leading to one or more of the diver or instructor qualifications specified in the relevant ISO standards. This document specifies requirements for each of these services separately. Thus, although a client might be provided with two services at the same time (for example, diver training and rental of diving equipment), the client is considered to be in receipt of two distinct services.

Examples of service providers are a land-based dive centre, a boat-based operation, a dive club, an individual instructor, a watersport centre or an operator offering snorkelling excursions.

Service providers can often supply compressed breathing gases. This service is not covered in this document as it is usually covered by national legislation and/or other standards.

This document for service providers has a key role in the series of standards for recreational diving services as it specifies requirements that are common to the provision of training and qualification of divers and instructors, as specified in the other standards in the series.

Australian Standard[®]

Recreational diving services — Requirements for recreational diving providers

1 Scope

This document specifies requirements for service providers in the field of recreational scuba diving and snorkelling excursions.

It specifies the following areas of service provision:

- (a) introductory diving activities;
- (b) snorkelling excursions;
- (c) provision of training and education;
- (d) organized and guided diving for qualified divers;
- (e) rental of diving and snorkelling equipment.

Service providers can offer one or more of these services. This document specifies the nature and quality of the services to the client.

This document does not apply to freediving (also called “apnea diving”).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 11121, *Recreational diving services — Requirements for introductory programmes to scuba diving*

ISO 13289, *Recreational diving services — Requirements for the conduct of snorkelling excursions*

ISO 24801-1, *Recreational diving services — Requirements for the training of recreational scuba divers — Part 1: Level 1 — Supervised diver*

ISO 24801-2, *Recreational diving services — Requirements for the training of recreational scuba divers — Part 2: Level 2 — Autonomous diver*

ISO 24801-3, *Recreational diving services — Requirements for the training of recreational scuba divers — Part 3: Level 3 — Dive leader*

ISO 24802-1:2014, *Recreational diving services — Requirements for the training of scuba instructors — Part 1: Level 1*

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- (a) ISO Online browsing platform: available at <http://www.iso.org/obp>
- (b) IEC Electropedia: available at <http://www.electropedia.org/>
