AS ISO 30401:2019

This Australian Standard® was prepared by MB-009, Human Resources and Employment. It was approved on behalf of the Council of Standards Australia on 21 November 2019.

This Standard was published on 6 December 2019.

The following are represented on Committee MB-009:

- Australian Chamber of Commerce and Industry
- Australian Council of Trade Unions
- Australian HR Institute
- Australian Industry Group
- Australian Organisation for Quality
- Australian Society of Rehabilitation Counsellors
- Griffith University
- Institute of Management Consultants
- RMIT University
- University Centre for Rural Health

This Standard was issued in draft form for comment as DR AS ISO 30401:2019.

Preface

This Standard was prepared by the Standards Australia Committee MB-009, Human Resources and Employment.

The objective of this Standard is to set requirements and provide guidelines for establishing, implementing, maintaining, reviewing and improving an effective management system for knowledge management in organizations.

All the requirements of this document are applicable to any organization, regardless of its type or size, or the products and services it provides.

This Standard is identical with, and has been reproduced from, ISO 30401:2018, *Knowledge management systems — Requirements*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 260, *Human resource management*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

0.1 Purpose

The purpose of this ISO management system standard for knowledge management is to support organizations to develop a management system that effectively promotes and enables value-creation through knowledge.

Knowledge management is a discipline focused on ways that organizations create and use knowledge. Knowledge management has no single accepted definition and no global standards predate this management system standard. There are many well-known barriers to successful knowledge management which still need to be overcome, many confusions with other disciplines such as information management, and many common misconceptions about how to do knowledge management, for example the view that simply buying a technology system will be enough for knowledge management to add value.

Each organization will craft a knowledge management approach, with respect to its own business and operational environment, reflecting their specific needs and desired outcomes.

The intent of this document is to set sound knowledge management principles and requirements

- a) as guidance for organizations that aim to be competent in optimizing the value of organizational knowledge;
- b) as a basis for auditing, certifying, evaluating and recognizing such competent organizations by internal and external recognized auditing bodies.

0.2 The importance of knowledge management

- a) The aim of work is to produce valuable results. Valuable results are derived from applied knowledge. Organizational knowledge is becoming a key differentiator for effectiveness, increased collaboration and competition.
- b) Knowledge work is increasingly important in many societies and organizations. Many economies aspire to become knowledge economies, where knowledge is the main source of wealth. In this context, knowledge becomes a core asset for organizations. Knowledge is especially important in many areas: it allows effective decisions to be made, supports the efficiency of processes and contributes to their enhancement, creates resilience and adaptability, creates competitive advantage and may even become a product in its own right.
- c) An increased access to knowledge will create opportunities for the professional development of people in the organization through learning, practices and exchanges.
- d) Organizations can no longer rely on the spontaneous diffusion of knowledge to keep up with the pace of change. Instead knowledge must be deliberately created, consolidated, applied, and reused faster than the rate of change.
- e) Geographically dispersed and decentralized organizations, conducting the same processes and delivering the same services in multiple locations, can gain tremendous advantage through sharing practices, expertise and learning across organizational boundaries.
- f) Workforce attrition and turnover in today's society has implications for knowledge management. In many organizations, critical knowledge is often siloed and/or retained by experts, at the risk of being lost when the organization changes or these experts leave.
- g) Effective knowledge management supports collaboration between different organisations to achieve shared objectives.

Knowledge is an intangible organizational asset that needs to be managed like any other asset. It needs to be developed, consolidated, retained, shared, adapted and applied so that workers can make effective decisions and take aligned actions, solving problems based on the experience of the past and

new insights into the future. Knowledge management is a holistic approach to improving learning and effectiveness through optimization of the use of knowledge, in order to create value for the organization. Knowledge management supports existing process and development strategies. As such, it needs to be integrated with other organizational functions.

0.3 Guiding principles

- a) Nature of knowledge: knowledge is intangible and complex; it is created by people.
- b) Value: knowledge is a key source of value for organizations to meet their objectives. The determinable value of knowledge is in its impact on organizational purpose, vision, objectives, policies, processes and performance. Knowledge management is a means of unlocking the potential value of knowledge.
- c) Focus: knowledge management serves the organizational objectives, strategies and needs.
- d) Adaptive: there is no one knowledge management solution that fits all organizations within all contexts. Organizations may develop their own approach to the scope of knowledge and knowledge management and how to implement these efforts, based on the needs and context.
- e) Shared understanding: people create their own knowledge by their own understanding of the input they receive. For shared understanding, knowledge management should include interactions between people, using content, processes and technologies where appropriate.
- f) Environment: knowledge is not managed directly; knowledge management focuses on managing the working environment, thus nurturing the knowledge lifecycle.
- g) Culture: culture is critical to the effectiveness of knowledge management.
- h) Iterative: knowledge management should be phased, incorporating learning and feedback cycles.

0.4 Range of knowledge management

Knowledge management varies between different organizations.

[Annex A](#) explains the range, viewing the various scopes of knowledge as a continuum.

[Annex B](#) explains knowledge management areas of interest, comparing it with adjacent disciplines.

0.5 Summary

This document defines the requirements for knowledge management systems in organizations, promising successful implementation of knowledge management. This document, however, maintains flexibility within the context of the requirements that enables conformity for every type of organization and alignment with all characteristics and needs.

Australian Standard®

Knowledge management systems — Requirements

1 Scope

This document sets requirements and provides guidelines for establishing, implementing, maintaining, reviewing and improving an effective management system for knowledge management in organizations. All the requirements of this document are applicable to any organization, regardless of its type or size or the products and services it provides.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

3.1

organization

person or group of people that has its own functions with responsibilities, authorities and relationships to achieve its *objectives* (3.8)

Note 1 to entry: The concept of organization includes, but is not limited to sole-trader, company, corporation, firm, enterprise, authority, partnership, charity or institution, or part or combination thereof, whether incorporated or not, public or private.

3.2

interested party (preferred term)

stakeholder (admitted term)

person or *organization* (3.1) that can affect, be affected by, or perceive itself to be affected by a decision or activity

Note 1 to entry: Everyone is potentially an interested party in knowledge management. Specific knowledge management initiatives will involve specific interested parties. For example, workers, top management, managers of projects/departments/work streams, external customers and clients, investors, partners and suppliers.

3.3

requirement

need or expectation that is stated, generally implied or obligatory

Note 1 to entry: “Generally implied” means that it is custom or common practice for the organization and interested parties that the need or expectation under consideration is implied.

Note 2 to entry: A specified requirement is one that is stated, for example in *documented information* (3.11).

3.4

management system

set of interrelated or interacting elements of an *organization* (3.1) to establish *policies* (3.7), and *objectives* (3.8) and *processes* (3.12) to achieve those *objectives*

Note 1 to entry: A management system can address a single discipline or several disciplines.
