Earth-moving machinery — Cutting edges used on tractor-dozers, graders and scrapers — Principal shapes and basic dimensions

currently in review, click buy full version

AS ISO 7129:2021

This Australian Standard ® was prepared by ME-063, Earthmoving Equipment. It was approved on behalf of the Council of Standards Australia on 30 June 2021.

This Standard was published on 9 July 2021.

The following are represented on Committee ME-063:

Australian Industry Group
Better Regulation Division — SafeWork NSW
Construction and Mining Equipment Industry Group
Department of Regional NSW
Department of Resources, Qld
Engineers Australia
Institute of Instrumentation, Control & Automation Australia
Minerals Council of Australia
Mining Electrical and Mining Mechanical Engineering Society
University of Queensland

This Standard was issued in draft form for comment as DR AS ISO 7129:2021.

Preface

This Standard was prepared by the Standards Australia Committee ME-063, Earthmoving Equipment.

The objective of this document is to specify the —

- (a) principal shapes and dimensions of the cross-section;
- (b) hole location for the mounting bolts; and
- (c) shapes and dimensions of holes for the mounting bolts,

for cutting used on tractor-dozers, graders and scrapers, as defined in ISO 6165, taking interchangeability into consideration.

This document is identical with, and has been reproduced from, ISO 7129:1997, *Earth-moving machinery — Cutting edges used on tractor-dozers, graders and scrapers — Principal shapes and basic dimensions*.

As this document has been reproduced from an International Standard, the following applies:

- (i) In the source text “this International Standard” should read “this document”.
- (ii) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	iv
1 Scope	1
2 Normative reference	1
3 Cross-sections of cutting edges — Principal shapes and basic dimensions	1
4 Mounting bolts — Hole locations	3
5 Mounting bolt holes — Shapes and dimensions	6
Annex A (normative) Principal shapes and basic dimensions of cutting edges with 140 mm and 280 mm hole pitch	8

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and nongovernmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7129 was prepared by Technical Committee ISO/TC 127, *Earth-moving machinery*, Subcommittee SC 3, *Operation and maintenance*.

This third edition cancels and replaces the second edition (ISO 7129:1989), which has been technically revised.

[Annex A](#) forms an integral part of this International Standard.

Australian Standard[®]

Earth-moving machinery — Cutting edges used on tractor-dozers, graders and scrapers — Principal shapes and basic dimensions

1 Scope

This International Standard specifies

- the principal shapes and dimensions of the cross-section,
- the hole location for the mounting bolts,
- the shapes and dimensions of holes for the mounting bolts,

for cutting used on tractor-dozers, graders and scrapers, as defined in ISO 6165, taking interchangeability into consideration.

NOTE Some values in inches in this International Standard are not equivalent to the corresponding values in millimetres because widely used values have been adopted.

2 Normative reference

The following standard contains provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the edition indicated was valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent edition of the standard indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 6165:1997, *Earth-moving machinery — Basic types — Vocabulary*.

3 Cross-sections of cutting edges — Principal shapes and basic dimensions

The principal shapes and basic dimensions of the cutting edge cross-section shall be as shown in [figures 1](#) and [2](#) and given in [tables 1](#) and [2](#).

Table 1 Tractor-dozers and scrapers (see [figure 1](#))

Dimensions in millimetres (Inch values in parentheses)

Application ¹⁾		Width, <i>W</i>		Thickness, <i>T</i>		Tip of chamfer, <i>F</i>	
Tractor with dozer	Tractor scraper	nom.	tol.	nom.	tol.	max.	min.
X		153 (6)		12,7 (0,5)		8 (0,32)	
X		153 (6)	+ 3 (+ 0,118)	16 (0,625)		10 (0,39)	
X		153 (6)		19 (0,75)		12 (0,47)	
△		160 (6,3)		16 (0,625)		10 (0,39)	
□		165 (6,5)		16 (0,625)		10 (0,39)	
X		204 (8)		16 (0,625)		10 (0,39)	
X		204 (8)		19 (0,75)		12 (0,47)	
X		204 (8)		22 (0,875)		13 (0,51)	
X		204 (8)		25,4 (1)		14 (0,55)	
X	X	254 (10)		19 (0,75)		12 (0,47)	

¹⁾ Recommendation only.

NOTE The shapes and dimensions of cutting edges with a 140 mm hole pitch are specified in [annex A](#).
