

Australian Standard™

**Capnometers for use with humans—  
Requirements**

This Australian Standard was prepared by Committee HE-019, Anaesthetic and Breathing Equipment. It was approved on behalf of the Council of Standards Australia on 20 February 2004 and published on 29 March 2004.

---

The following are represented on Committee HE-019:

Australasian Society of Anaesthesia Paramedical Officers  
Australian and New Zealand College of Anaesthetists  
Australian and New Zealand Intensive Care Society  
Australian Chamber of Commerce and Industry  
Australian College of Operating Room Nurses  
Australian Industry Group  
Australian Society of Anaesthetists  
College of Biomedical Engineering Institution of Engineers Australia  
Commonwealth Department of Health and Ageing  
Department of Human Services (South Australia)  
Health Department of Western Australia  
Medical Industry Association of Australia Inc  
NSW Health Department

---

#### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at [www.standards.com.au](http://www.standards.com.au) and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

## PREFACE

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee HE-019, Anaesthetic and Breathing Equipment. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian, rather than an Australian/New Zealand Standard.

This Standard is identical with and has been reproduced from ISO 9918:1993, *Capnometers for use with humans - Requirements*.

The objective of this Standard is to specify requirements for the safety of capnometers used with adults, children and neonates.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

As this Standard is reproduced from an international Standard, the following apply:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this International Standard’ should read ‘this Australian Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards as follows:

<i>Reference to International Standard</i>	<i>Australian or Australian/New Zealand Standard</i>
ISO	AS/ISO
9703     Anaesthesia and respiratory care alarm signals	9703     Anaesthesia and respiratory care alarm signals
9703-1   Part 1: Visual alarm signals	9703.1   Part 1: Visual alarm signals
IEC	AS/NZS
601     Medical electrical equipment	3200     Medical electrical equipment
601-1   Part 1: General requirements for safety	3200.1   Part 1.0: General requirements for safety - Parent Standard

Only international references that have been adopted as Australian or Australian/New Zealand Standards have been listed.

## CONTENTS

<b>Section 1 General</b> .....	<b>1</b>
1.1 Scope .....	1
1.2 Normative references .....	1
1.3 Definitions .....	1
1.4 General requirements .....	3
1.5 General requirements for tests .....	3
1.6 Classification .....	3
1.7 Identification marking and documents .....	3
1.8 Power point .....	5
<b>Section 2 Environmental conditions</b> .....	<b>6</b>
2.1 Basic safety categories .....	6
2.2 Removable protective means .....	6
2.3 Environmental conditions .....	6
2.4 Special measures with respect to safety .....	6
2.5 Single fault condition .....	6
<b>Section 3 Protection against electric shock hazards</b> .....	<b>7</b>
3.1 General .....	7
3.2 Requirements related to classification .....	7
3.3 Limitation of voltage and/or energy .....	7
3.4 Enclosures and protective covers .....	7
3.5 Separation .....	7
3.6 Protective earthing, functional earthing and potential equalization .....	7
3.7 Continuous leakage currents and patient auxiliary currents .....	7
3.8 Dielectric strength .....	7

<b>Section 4 Protection against mechanical hazards</b>	<b>8</b>
4.1 Mechanical strength	8
4.2 Moving parts	8
4.3 Surfaces, corners and edges	8
4.4 Stability in normal use	8
4.5 Expelled parts	8
4.6 Vibration and noise	9
4.7 Pneumatic and hydraulic power	10
4.8 Suspended masses	10
<b>Section 5 Protection against hazards from unwanted or excessive radiation</b>	<b>11</b>
5.1 X-radiation	11
5.2 Alpha, beta, gamma, neutron radiation and other particle radiation	11
5.3 Microwave radiation	11
5.4 Light radiation (including lasers)	11
5.5 Infrared radiation	11
5.6 Ultraviolet radiation	11
5.7 Acoustical energy (including ultrasonics)	11
5.8 Electromagnetic compatibility	11
<b>Section 6 Protection against hazards of ignition of flammable and explosive mixtures</b>	<b>12</b>
6.1 Locations and basic requirements	12
6.2 Marking, accompanying documents	12
6.3 Common requirements for category AP and category APG equipment	12
6.4 Requirements and tests for category AP equipment, and parts and components	12
6.5 Requirements and tests for category APG equipment, and parts and components	12
<b>Section 7 Protection against excessive temperatures and other safety hazards</b>	<b>13</b>
7.1 Excessive temperatures	13
7.2 Fire prevention	13

7.3	Overflow, spillage, leakage, humidity, ingress of liquids, cleaning, sterilization and disinfection .....	13
7.4	Pressure vessels and parts subject to pressure .....	14
7.5	Human error .....	14
7.6	Electrostatic charges .....	14
7.7	Materials in applied parts in contact with the body of the patient .....	14
7.8	Interruption of power supply .....	14
<b>Section 8</b>	<b>Accuracy of operating data and protection against hazardous output .....</b>	<b>15</b>
8.1	Accuracy of operating data .....	15
<b>Section 9</b>	<b>Abnormal operation and fault conditions; environmental tests .....</b>	<b>19</b>
9.1	Abnormal operation and fault conditions .....	19
9.2	Environmental tests .....	19
<b>Section 10</b>	<b>Constructional requirements .....</b>	<b>20</b>
10.1	General .....	20
10.2	Enclosures and covers .....	20
10.3	Components and general assembly .....	20
10.4	Mains parts, components and layout .....	20
10.5	Protective earthing — Terminals and connections .....	20
10.6	Construction and layout .....	20
<b>Section 11</b>	<b>Additional requirements specific to capnometers .....</b>	<b>21</b>

## INTRODUCTION

The measurement of carbon dioxide in a gaseous mixture has become a common practice in many areas of clinical medicine, such as anaesthesia, respiratory therapy, paediatrics and intensive care. This International Standard specifies minimum safety requirements based on parameters that are achievable within the limits of existing technology.

Annex L contains a rationale for the most important requirements. It is included to provide additional insight into the reasoning that led to the requirements and recommendations that have been incorporated in the International Standard.

## AUSTRALIAN STANDARD

**Capnometers for use with humans — Requirements****Section 1: General****1.1 Scope**

ISO 9918 is one of a series of International Standards based on IEC 601-1; in IEC 601-1 (the "General Standard"), this type of International Standard is referred to as a "Particular Standard". As stated in 1.3 of IEC 601-1:1988, the requirements of this International Standard take precedence over those of IEC 601-1.

The scope and object given in clause 1 of IEC 601-1:1988 apply except that 1.1 shall be replaced by the following:

This International Standard specifies requirements for the safety of capnometers, as defined in 1.3.6.

It applies to capnometers used with adults, children and neonates. It does not apply to devices intended for use as transcutaneous monitors.

Capnometers intended for use in laboratory research applications are outside the scope of this International Standard.

**1.2 Normative references**

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 3744:—<sup>1)</sup>, *Acoustics — Determination of sound power levels of noise sources using sound pressure*

1) To be published. (Revision of ISO 3744:1981)

— *Engineering method in an essentially free field over a reflecting plane.*

ISO 5356-1:1987, *Anaesthetic and respiratory equipment — Conical connectors — Part 1: Cones and sockets.*

ISO 5356-2:1987, *Anaesthetic and respiratory equipment — Conical connectors — Part 2: Screw-threaded wrench-bearing connectors.*

ISO 3700:1992, *Anaesthesia and respiratory care alarm signals — Part 1: Visual alarm signals.*

IEC 65:1985, *Safety requirements for mains operated electronic and related apparatus for household and similar general use.*

IEC 601-1:1988, *Safety of medical electrical equipment — Part 1: General safety requirements.*

IEC 651:1979, *Sound level meters.*

IEC 801-2:1991, *Electromagnetic compatibility for industrial process measurement and control equipment — Part 2: Electrostatic discharge requirements.*

**1.3 Definitions**

For the purposes of this International Standard, the definitions given in clause 2 of IEC 601-1:1988 apply, with the following additional definitions.

**1.3.1 accuracy:** Quality which characterizes the ability of a device to give indications approximating to the true value of the quantity measured.

**1.3.2 alarm:** Signal that is activated when a monitored variable equals or crosses the alarm limit.
