ASME Boiler and
Pressure Vessel Code
An International Code

**Rules for Construction
of Heating Boilers**

Currently in preview, click buy full version

Markings such as “ASME,” “ASME Standard,” or any other marking including “ASME,” ASME logos, or the ASME Single Certification Mark shall not be used on any item that is not constructed in accordance with all of the applicable requirements of the Code or Standard. Use of the ASME Single Certification Mark requires formal ASME certification; if no certification program is available, such ASME markings may not be used. (For Certification and Accreditation Programs, see <https://www.asme.org/certification-accreditation>.)

Items produced by parties not formally possessing an ASME Certificate may not be described, either explicitly or implicitly, as ASME certified or approved in any code forms or other document.

AN INTERNATIONAL CODE

2025 ASME Boiler & Pressure Vessel Code

2025 Edition

July 1, 2025

IV RULES FOR CONSTRUCTION OF HEATING BOILERS

ASME Boiler and Pressure Vessel Committee
on Heating Boilers

The American Society of
Mechanical Engineers

Two Park Avenue • New York, NY • 10016 USA

Date of Issuance: July 1, 2025

This international code or standard was developed under procedures accredited as meeting the criteria for American National Standards and it is an American National Standard. The standards committee that approved the code or standard was balanced to ensure that individuals from competent and concerned interests had an opportunity to participate. The proposed code or standard was made available for public review and comment, which provided an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large

ASME does not “approve,” “certify,” “rate,” or “endorse” any item, construction, proprietary device, or activity. ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor does ASME assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility

Participation by federal agency representatives or persons affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

The endnotes and preamble in this document (if any) are part of this American National Standard.

ASME Collective Membership Mark

ASME Single Certification Mark

Part HG	General Requirements for All Materials of Construction	1
Article 1	Scope and Service Restrictions	1
HG-100	Scope	1
HG-101	Service Restrictions	1
HG-102	Units	1
HG-103	Tolerances	2
Article 2	Material Requirements	3
HG-200	General Material Requirements	3
HG-201	Specific Material Requirements	3
Article 3	Design	4
HG-300	Design Pressure	4
HG-301	Cylindrical Parts Under Internal Pressure	4
HG-305	Formed Heads, Pressure on Concave Side	4
HG-306	Formed Heads, Pressure on Convex Side	5
HG-307	Flat Heads	5
HG-309	Spherically Dished Covers (Bolted Heads)	9
HG-312	Cylindrical Parts Under External Pressure	11
HG-320	Openings in Boilers, General Requirements	14
HG-321	Reinforcement Required for Openings in Shells and Formed Heads	15
HG-323	Flanged-In Openings in Formed Heads	16
HG-325	Reinforcement Required for Openings in Flat Heads	16
HG-326	Limits of Metal Available for Reinforcement	17
HG-327	Strength of Reinforcement	19
HG-328	Reinforcement for Multiple Openings	19
HG-330	Inspection and Access Openings	19
HG-340	Stayed Surfaces	21
HG-341	Staybolts	23
HG-342	Dimensions of Stays	23

HG-343	Dimensions of Diagonal Stays	26
HG-345	Staying of Heads	26
HG-346	Tubesheets With Firetubes Used as Stays	27
HG-350	Ligaments	30
HG-360	Requirements for Tube Holes and Tube Attachments	30
HG-370	External Piping Connections	33
Article 4A	Overpressure Protection	34
HG-400A	General Requirements	34
HG-401A	Responsibility	34
HG-402A	Pressure Relief Valve Requirements	34
HG-403A	Heating Surface	36
Article 5	Tests, Inspection, and Marking	37
HG-500	Proof Tests to Establish Design Pressure	37
Article 6	Instruments, Fittings, and Controls	52
HG-600	General	52
HG-601	For Steam Heating Boilers	52
HG-610	For Hot Water Heating or Hot Water Supply Boilers	54
HG-620	For All Boilers	55
HG-630	Electric Wiring	55
HG-640	Controls and Heat Generating Apparatus	55
Article 7	Installation Requirements	57
HG-700	Installation Requirements, All Boilers	57
Article 8	Modular Boilers	66
HG-800	Inspection and Access Opening	66
HG-801	Marking, Certification, and Data Reports	66
HG-803	Installation Requirements	67
Part HF	Requirements for Boilers Constructed of Wrought Materials	69
Article 1	General	69
HF-100	Scope	69
Article 2	Material Requirements	70
HF-200	General Material Requirements	70
HF-201	Plate	70
HF-202	Rods, Bars, and Shapes	70
HF-203	Refabricated or Preformed Pressure Parts	70
HF-204	Pipe and Tubes	71
HF-205	Material Not Fully Identified	72
HF-206	Recertification of Material Produced to a Specification Not Permitted by This Section	73
HF-207	Austenitic Stainless Steel	73
HF-210	Maintaining Material Identification	73
Article 3	Design Stresses and Minimum Thicknesses	74
HF-300	Maximum Allowable Stress Values	74
HF-301	Minimum Thicknesses	74
HF-302	Basis for Establishing Stress Values in Section II, Part D, Table 6A or Table 6B	74
Part HF — Subpart HW	Requirements for Boilers Fabricated by Welding	75

Article 4	General Requirements	75
HW-400	Scope	75
HW-401	Responsibility of Manufacturer or Contractor	75
Article 5	Material Requirements	76
HW-500	Permissible Materials	76
HW-501	Materials of Different Specifications	76
HW-502	Materials for Small Parts	76
Article 6	Welding Processes and Qualifications	77
HW-600	Welding Processes	77
HW-610	Welding Qualifications	77
HW-611	No Production Work Without Qualifications	77
HW-612	Interchange of Qualifying Tests Among Manufacturers Prohibited	77
HW-613	Maintenance of Records of Qualifications and Identifying Marks	77
Article 7	Design of Weldments	78
HW-700	Design of Welded Joints	78
Article 8	Fabrication Requirements	93
HW-800	Forming Plates	93
HW-801	Base Metal Preparation	93
HW-810	Assembly	93
HW-812	Alignment Tolerance	93
HW-813	Distortion	93
HW-820	Specific Welding Requirements	94
HW-830	Repair of Weld Defects	95
HW-840	Posthydrotest Welding of Low Pressure Parts to Pressure Parts	95
Article 9	Inspection	96
HW-900	Inspection During Fabrication	96
HW-910	Check of Welding Procedure Qualifications	96
HW-911	Check of Welder and Welding Operator Performance Qualifications	96
Part HF — Subpart HB	Requirements for Boilers Fabricated by Brazing	97
Article 10	General Requirements	97
HB-1000	Scope	97
HB-1001	Responsibility of Manufacturer or Contractor	97
Article 11	Material Requirements	98
HB-1100	General	98
HB-1101	Combinations of Dissimilar Materials	98
HB-1102	Brazing Filler Metals	98
HB-1103	Fluxes and Atmospheres	98
Article 12	Brazing Processes, Procedures, and Qualifications	99
HB-1200	Brazing Processes	99
HB-1201	Joint Brazing Procedures	99
HB-1202	Brazing Qualifications and Records	99
Article 13	Design	100
HB-1300	Strength of Brazed Joints	100
HB-1301	Brazed Joint Efficiency Factors	100
HB-1302	Minimum Thickness	100

HB-1303	Permissible Service Temperature	100
HB-1304	Application of Brazing Filler Metal	100
HB-1305	Joint Clearance	100
HB-1306	Openings	101
HB-1307	Brazed Connections	101
Article 14	Fabrication Requirements	102
HB-1400	Cleaning of Surfaces to Be Brazed	102
HB-1401	Postbrazing Operations	102
HB-1402	Repair of Defective Brazing	102
Article 15	Inspection and Marking	103
HB-1500	Inspection	103
Part HC	Requirements for Boilers Constructed of Cast Iron	104
Article 1	General	104
HC-100	Scope	104
Article 2	Material Requirements	105
HC-200	General Material Requirements	105
HC-201	Manufacture	105
HC-202	Chemical Composition	105
HC-203	Tensile Strength Classification	105
HC-204	Test Bars	105
HC-205	Selection of Test Bar Size	105
HC-206	Molding and Pouring Test Bars	105
HC-207	Number of Tests	105
HC-208	Tension Test	106
HC-209	Tension Test Procedure	106
HC-210	Tension Retests	106
HC-211	Transverse Test	107
HC-212	Transverse Test Procedure	107
HC-213	Transverse Retests	107
HC-214	Workmanship, Finish, and Repair	108
HC-215	Examinations and Tests	108
HC-216	Test Records	108
Article 3	Design	110
HC-300	Maximum Allowable Stress Values	110
HC-301	Basis for Establishing Stress Values in Table HC-300	110
HC-310	Heads	110
HC-311	Spherically Shaped Covers	110

LIST OF SECTIONS

SECTIONS

- I Rules for Construction of Power Boilers
- II Materials
 - Part A — Ferrous Material Specifications
 - Part B — Nonferrous Material Specifications
 - Part C — Specifications for Welding Rods, Electrodes, and Filler Metals
 - Part D — Properties (Customary)
 - Part D — Properties (Metric)
- III Rules for Construction of Nuclear Facility Components
 - Subsection NCA — General Requirements for Division 1 and Division 2
 - Appendices
 - Division 1
 - Subsection NB — Class 1 Components
 - Subsection NCD — Class 2 and Class 3 Components
 - Subsection NE — Class MC Components
 - Subsection NF — Supports
 - Subsection NG — Core Support Structures
 - Division 2 — Code for Concrete Containments
 - Division 3 — Containment Systems for Transportation and Storage of Spent Nuclear Fuel and High-Level Radioactive Material
 - Division 4 — Fusion Energy Devices
 - Division 5 — High Temperature Reactors
- IV Rules for Construction of Heating Boilers
- V Nondestructive Examination
- VI Recommended Rules for the Care and Operation of Heating Boilers
- VII Recommended Guidelines for the Care of Power Boilers
- VIII Rules for Construction of Pressure Vessels
 - Division 1
 - Division 2 — Alternative Rules
 - Division 3 — Alternative Rules for Construction of High Pressure Vessels
- IX Welding, Brazing, and Fusing Qualifications
- X Fiber-Reinforced Plastic Pressure Vessels
- XI Rules for Inservice Inspection of Nuclear Reactor Facility Components
 - Division 1 — Rules for Inservice Inspection of Nuclear Power Plant Components
 - Division 2 — Requirements for Reliability and Integrity Management (RIM) Programs for Nuclear Reactor Facilities
- XII Rules for Construction and Continued Service of Transport Tanks
- XIII Rules for Overpressure Protection

FOREWORD*

(25)

In 1911, The American Society of Mechanical Engineers established the Boiler and Pressure Vessel Committee to formulate standard rules for the construction of steam boilers and other pressure vessels. In 2009, the Boiler and Pressure Vessel Committee was superseded by the following committees:

- (a) Committee on Power Boilers (I)
- (b) Committee on Materials (II)
- (c) Committee on Construction of Nuclear Facility Components (III)
- (d) Committee on Heating Boilers (IV)
- (e) Committee on Nondestructive Examination (V)
- (f) Committee on Pressure Vessels (VIII)
- (g) Committee on Welding, Brazing, and Fusing (IX)
- (h) Committee on Fiber-Reinforced Plastic Pressure Vessels (X)
- (i) Committee on Nuclear Inservice Inspection (XI)
- (j) Committee on Transport Tanks (XII)
- (k) Committee on Overpressure Protection (XIII)
- (l) Technical Oversight Management Committee (TOMC)

Where reference is made to “the Committee” in this Foreword, each of these committees is included individually and collectively.

The Committee’s function is to establish rules of safety relating to pressure integrity. The rules govern the construction** of boilers, pressure vessels, transport tanks, and nuclear components, and the inservice inspection of nuclear components and transport tanks. For nuclear items other than pressure-retaining components, the Committee also establishes rules of safety related to structural integrity. The Committee also interprets these rules when questions arise regarding their intent. The technical consistency of the Sections of the Code and coordination of standards development activities of the Committees is supported and guided by the Technical Oversight Management Committee. The Code does not address other safety issues relating to the construction of boilers, pressure vessels, transport tanks, or nuclear components, or the inservice inspection of nuclear components or transport tanks. Users of the Code should refer to the pertinent codes, standards, laws, regulations, or other relevant documents for safety issues other than those relating to pressure integrity and, for nuclear items other than pressure-retaining components, structural integrity. Except for Sections XI and XII, and with a few other exceptions, the rules do not, of practical necessity, reflect the likelihood and consequences of deterioration in service related to specific service fluids or external operating environments. In formulating the rules, the Committee considers the needs of users, manufacturers, and inspectors of components addressed by the Code. The objective of the rules is to afford reasonably certain protection of life and property, and to provide a margin for deterioration in service to give a reasonably long, safe period of usefulness. Advancements in design and materials and evidence of experience have been recognized.

The Code contains mandatory requirements, specific prohibitions, and nonmandatory guidance for construction activities and inservice inspection and testing activities. The Code does not address all aspects of these activities and those aspects that are not specifically addressed should not be considered prohibited. The Code is not a handbook and cannot replace education, experience, and the use of engineering judgment. The phrase *engineering judgment* refers to technical judgments made by knowledgeable engineers experienced in the application of the Code. Engineering judgments must be consistent with Code philosophy, and such judgments must never be used to overrule mandatory requirements or specific prohibitions of the Code.

The Committee recognizes that tools and techniques used for design and analysis change as technology progresses and expects engineers to use good judgment in the application of these tools. The designer is responsible for complying with Code rules and demonstrating compliance with Code equations when such equations are mandatory. The Code neither requires nor prohibits the use of computers for the design or analysis of components constructed to the requirements of the Code. However, designers and engineers using computer programs for design or analysis are cautioned that they are

* The information contained in this Foreword is not part of this American National Standard (ANS) and has not been processed in accordance with ANSI’s requirements for an ANS. Therefore, this Foreword may contain material that has not been subjected to public review or a consensus process. In addition, it does not contain requirements necessary for conformance to the Code.

** *Construction*, as used in this Foreword, is an all-inclusive term comprising materials, design, fabrication, examination, inspection, testing, certification, and overpressure protection.

responsible for all technical assumptions inherent in the programs they use and the application of these programs to their design.

The rules established by the Committee are not to be interpreted as approving, recommending, or endorsing any proprietary or specific design, or as limiting in any way the manufacturer's freedom to choose any method of design or any form of construction that conforms to the Code rules.

The Committee meets regularly to consider revisions of the rules, new rules as dictated by technological development, Code cases, and requests for interpretations. Only the Committee has the authority to provide official interpretations of the Code. Requests for revisions, new rules, Code cases, or interpretations shall be addressed to the staff secretary in writing and shall give full particulars in order to receive consideration and action (see the Correspondence With the Committee page). Proposed revisions to the Code resulting from inquiries will be presented to the Committee for appropriate action. The action of the Committee becomes effective only after confirmation by ballot of the Committee and approval by ASME. Proposed revisions to the Code approved by the Committee are submitted to the American National Standards Institute (ANSI) and published at <http://go.asme.org/BPVCPublicReview> to invite comments from all interested persons. After public review and final approval by ASME, revisions are published at regular intervals in Editions of the Code.

The Committee does not rule on whether a component shall or shall not be constructed to the provisions of the Code. The scope of each Section has been established to identify the components and parameters considered by the Committee in formulating the Code rules.

Questions or issues regarding compliance of a specific component with the Code rules are to be directed to the ASME Certificate Holder (Manufacturer). Inquiries concerning the interpretation of the Code are to be directed to the Committee. ASME is to be notified should questions arise concerning improper use of the ASME Single Certification Mark.

When required by context in the Code, the singular shall be interpreted as the plural, and vice versa.

The words "shall," "should," and "may" are used in the Code as follows:

- *Shall* is used to denote a requirement.
- *Should* is used to denote a recommendation.
- *May* is used to denote permission, neither a requirement nor a recommendation.

STATEMENT OF POLICY ON THE USE OF THE ASME SINGLE CERTIFICATION MARK AND CODE AUTHORIZATION IN ADVERTISING

ASME has established procedures to authorize qualified organizations to perform various activities in accordance with the requirements of the ASME Boiler and Pressure Vessel Code. It is the aim of the Society to provide recognition of organizations so authorized. An organization holding authorization to perform various activities in accordance with the requirements of the Code may state this capability in its advertising literature.

Organizations that are authorized to use the ASME Single Certification Mark for marking items or constructions that have been constructed and inspected in compliance with the ASME Boiler and Pressure Vessel Code are issued Certificates of Authorization. It is the aim of the Society to maintain the standing of the ASME Single Certification Mark for the benefit of the users, the enforcement jurisdictions, and the holders of the ASME Single Certification Mark who comply with all requirements.

Based on these objectives, the following policy has been established on the usage in advertising of facsimiles of the ASME Single Certification Mark, Certificates of Authorization, and reference to Code construction. The American Society of Mechanical Engineers does not “approve,” “certify,” “rate,” or “endorse” any item, construction, or activity and there shall be no statements or implications that might so indicate. An organization holding the ASME Single Certification Mark and/or a Certificate of Authorization may state in advertising literature that items, constructions, or activities “are built (produced or performed) or activities conducted in accordance with the requirements of the ASME Boiler and Pressure Vessel Code,” or “meet the requirements of the ASME Boiler and Pressure Vessel Code.” An ASME corporate logo shall not be used by any organization other than ASME.

The ASME Single Certification Mark shall be used only for stamping and nameplates as specifically provided in the Code. However, facsimiles may be used for the purpose of fostering the use of such construction. Such usage may be by an association or a society, or by a holder of the ASME Single Certification Mark who may also use the facsimile in advertising to show that clearly specified items will carry the ASME Single Certification Mark.

STATEMENT OF POLICY ON THE USE OF ASME MARKING TO IDENTIFY MANUFACTURED ITEMS

The ASME Boiler and Pressure Vessel Code provides rules for the construction of boilers, pressure vessels, and nuclear components. This includes requirements for materials, design, fabrication, examination, inspection, and stamping. Items constructed in accordance with all of the applicable rules of the Code are identified with the ASME Single Certification Mark described in the governing Section of the Code.

Markings such as “ASME,” “ASME Standard,” or any other marking including “ASME” or the ASME Single Certification Mark shall not be used on any item that is not constructed in accordance with all of the applicable requirements of the Code.

Items shall not be described on ASME Data Report Forms nor on similar forms referring to ASME that tend to imply that all Code requirements have been met when, in fact, they have not been. Data Report Forms covering items not fully complying with ASME requirements should not refer to ASME or they should clearly identify all exceptions to the ASME requirements.
