Date of Issuance: January 20, 2023

The next edition of this Standard is scheduled for publication in 2024. This Standard will become effective 6 months after the Date of Issuance.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The standards committee that approved the code or standard was balanced to ensure that individuals from competent and concerned interests had an opportunity to participate. The proposed code or standard was made available for public review and comment, which provided an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “certify,” “rate,” or “endorse” any item, construction, proprietary device, or activity. ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor does ASME assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representatives or persons affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

The endnotes and preamble in this document (if any) are part of this American National Standard.

## FOREWORD

In 2011, The American Society of Mechanical Engineers (ASME) established the Committee on Nonmetallic Pressure Piping Systems (NPPS) to develop standards for the construction of nonmetallic pressure piping systems. This Committee's goal was to specify construction requirements for nonmetallic piping and piping products; such requirements were not adequately defined in existing standards.

Prior to the development of the ASME Standards for Nonmetallic Pressure Piping Systems, nonmetallic pressure piping requirements were contained within several existing standards. The nonmetallic piping requirements of the ASME B31 Code for Pressure Piping varied across Sections, with some Sections having no requirements for nonmetallic components at all. Other standards and codes, such as ASME RTP-1 and the ASME Boiler and Pressure Vessel Code (BPVC) Section X, included requirements for reinforced thermoset plastic (RTP) corrosion-resistant equipment but not for piping and piping components. ASME BPVC, Section III did have a few Code Cases that addressed requirements for some nonmetallic piping and piping components, including those made from glass-fiber-reinforced thermosetting resin and a few thermoplastics, e.g., high density polyethylene (HDPE) and poly(vinyl chloride) (PVC). However, the scope of these Code Cases was very limited, and in some cases the methodology was nearly 30 years old. The ASME NPPS Standards now serve as a centralized location for NPPS requirements and are developed by committees whose members are experts in this field. The NPPS Committee's functions are to establish requirements related to pressure integrity for the construction of nonmetallic pressure piping systems, and to interpret these requirements when questions arise regarding their intent.

ASME and the American Society for Testing and Materials (ASTM International) have cooperated for more than 50 years in the preparation of material specifications adequate for safety in the field of pressure equipment. This cooperative effort originated with metallic materials in ASME BPVC, Section II.

The evolution of this cooperative effort is described in Professor A. I. Greene's "History of the ASME Boiler Code," which was published as a series of articles in *Mechanical Engineering* from July 1952 through August 1953. The following quotations, which are based on the minutes of the ASME Boiler and Pressure Vessel Committee, are taken from Professor Greene's history and illustrate the cooperative nature of the specifications found in ASME BPVC, Section II, Material Specifications:

"General discussion of material specifications comprising [Paragraphs] 1 to 112 of Part 2 and the advisability of having them agree with ASTM specifications." (1914)

"An ASME Subcommittee . . . was appointed to confer with the American Society for Testing Materials." (1916)

"Because of this co-operation the specifications of the 1918 Edition of the ASME Boiler Code were more nearly in agreement with ASTM specifications. . . . In the 1924 Edition of the Code, ten specifications were in complete agreement with ASTM specifications, four in substantial agreement, and two covered materials for which the American Society for Testing Materials had no corresponding specifications. . . .

"In Section II, Material Specifications, the paragraphs were given new numbers, beginning with S-1 and extending to S-213." (1925)

"Section II was brought into agreement with changes made in the latest ASTM specifications since 1924." (1932)

"The Subcommittee on Material Specifications . . . arranged for the introduction of the revisions of many of the specifications so that they would agree with the latest form of the earlier ASTM Specifications." (1935)

---

\* *Construction*, as used in this Foreword, is an all-inclusive term comprising materials, design, fabrication, erection, examination, inspection, testing, and overpressure protection.

This cooperation has continued with the ASME NPPS Standards. ASME NM.3.1 and ASME NM.3.2 contain many material specifications that are similar to the corresponding ASTM specifications but that have been modified for use in accordance with an ASME construction standard.\*\* Many of these specifications are published in dual format, i.e., they include both U.S. Customary units and SI units. The metrication protocols followed in the specifications are those adopted by ASTM, and they usually conform to the requirements of IEEE/ASTM SI 10-1997, Standard for the Use of the International System of Units (SI): The Modern Metric System.

In 1992, the ASME Board of Pressure Technology Codes and Standards endorsed the use of non-ASTM material for ASME BPVC applications with the intent that ASME's procedures and practices for the adoption of ASTM material be used for the adoption of non-ASTM materials. ASME committees continue to consider materials for use in ASME applications; see [Mandatory Appendix IV](#) for guidance on the approval of new materials.

ASME material specifications identical to those of the originating organization are identified by both the ASME symbol and the originating organization's symbol. The specifications prepared and copyrighted by ASTM and other originating organizations are reproduced in this Standard with the permission of the respective organization. The NPPS Committee has carefully considered each new and revised specification, and has made such changes as deemed necessary to adapt the specification for use in accordance with an ASME construction standard. In addition, ASME has furnished ASTM with the basic requirements that should govern many proposed new specifications. Joint action will continue an effort to make the ASTM and ASME specifications identical.

ASME NM.3.1-2020 was approved by the American National Standards Institute (ANSI) on October 29, 2020.

ASME NM.3.1-2022 was approved by ANSI on September 15, 2022.

---

\*\* ASME construction standards include the ASME B16 series of standards, the ASME B31 Code for Pressure Piping, ASME BPVC, ASME NM.1, ASME NM.2, and ASME RTP-1.

# ASME NPPS COMMITTEE

## Nonmetallic Pressure Piping Systems

(The following is the roster of the Committee at the time of approval of this Standard.)

### STANDARDS COMMITTEE OFFICERS

**C. Henley**, *Chair*  
**D. McGriff**, *Vice Chair*  
**C. Ramcharran**, *Secretary*

### STANDARDS COMMITTEE PERSONNEL

**R. Appleby**, Consultant  
**B. R. Colley**, INEOS Composites  
**R. Davis**, Consultant  
**C. Davison**, NUPI Americas  
**J. Eisenman**, Maverick Applied Science, Inc.  
**M. Engelkemier**, Cargill  
**B. Hebb**, RPS Composites, Inc.  
**C. Henley**, Kiewit Engineering Group, Inc.  
**L. Hutton**, Plasticwelding, LLC  
**D. McGriff**, ISCO Industries, Inc.  
**T. Musto**, Sargent and Lundy, LLC  
**C. Ramcharran**, The American Society of Mechanical Engineers  
**C. W. Rowley**, The Wesley Corp.  
**L. Vetter**, Sargent and Lundy, LLC  
**V. D. Holohan**, *Contributing Member*, U.S. Department of Transportation — Pipeline and Hazardous Materials Safety Administration  
**D. L. Keeler**, *Contributing Member*, Consultant  
**W. Lundy**, *Contributing Member*, U.S. Coast Guard

### SUBCOMMITTEE ON NONMETALLIC MATERIALS

**C. Davison**, *Chair*, NUPI Americas  
**C. Rodrigues**, *Secretary*, The American Society of Mechanical Engineers  
**M. Brandes**, ISCO Industries  
**B. R. Colley**, INEOS Composites  
**R. Davis**, Consultant  
**P. K. Gilbert**, NOV Fiber Glass Systems  
**L. Hutton**, Plasticwelding, LLC  
**J. Mason**, Mason Materials Development, LLC  
**T. Musto**, Sargent and Lundy, LLC  
**R. Nadel**, Charlotte Pipe and Foundry  
**A. E. Reynolds**, Asahi America  
**C. W. Rowley**, The Wesley Corp.  
**M. Cudahy**, *Contributing Member*, Plastic Pipe and Fittings Association  
**C. Moore**, *Contributing Member*, NOV Fiber Glass Systems  
**A. Sakr**, *Contributing Member*, Consultant

### NM-2-FDP (NM) NM-3-NMM SUBGROUP ON MATERIALS

**P. K. Gilbert**, *Chair*, NOV Fiber Glass Systems  
**G. A. Van Beek**, *Vice Chair*, Southern Company Services  
**D. S. Brown**, Interplastic Corp.  
**B. R. Colley**, INEOS Composites  
**K. Wachholder**, Sargent and Lundy, LLC  
**L. E. Hunt**, *Contributing Member*, L. E. Hunt and Associates, LLC

### THERMO SUBGROUP ON MATERIALS

**L. Hutton**, *Chair*, Plasticwelding, LLC  
**A. Palovc**, *Vice Chair*, Arkema  
**C. Eastman**, Kiewit Power Constructors  
**L. Gill**, Ipex USA, LLC  
**F. Heston**, Lubrizol Advanced Materials  
**J. Mason**, Mason Materials Development, LLC  
**R. Nadel**, Charlotte Pipe and Foundry  
**S. Dolejsi**, *Alternate*, Ipex USA, LLC  
**D. R. Townley**, *Alternate*, Lubrizol Advanced Materials  
**V. D. Holohan**, *Contributing Member*, U.S. Department of Transportation — Pipeline and Hazardous Materials Safety Administration

## **ASTM Personnel**

# CORRESPONDENCE WITH THE NPPS COMMITTEE

**General.** ASME codes and standards are developed and maintained by committees with the intent to represent the consensus of concerned interests. Users of ASME codes and standards may correspond with the committees to propose revisions or cases, report errata, or request interpretations. Correspondence for this Standard should be sent to the staff secretary noted on the committee's web page, accessible at <https://go.asme.org/NPPScommittee>.

**Revisions and Errata.** The committee processes revisions to this Standard on a continuous basis to incorporate changes that appear necessary or desirable as demonstrated by the experience gained from the application of the Standard. Approved revisions will be published in the next edition of the Standard.

In addition, the committee may post errata on the committee web page. Errata become effective on the date posted. Users can register on the committee web page to receive e-mail notifications of posted errata.

This Standard is always open for comment, and the committee welcomes proposals for revisions. Such proposals should be as specific as possible, citing the paragraph number(s), the proposed wording, and a detailed description of the reasons for the proposal, including any pertinent background information and supporting documentation.

## Cases

(a) The most common applications for cases are

(1) to permit early implementation of a revision based on an urgent need

(2) to provide alternative requirements

(3) to allow users to gain experience with alternative or potential additional requirements prior to incorporation directly into the Standard

(4) to permit the use of a new material or process

(b) Users are cautioned that not all jurisdictions or owners automatically accept cases. Cases are not to be considered as approving, recommending, certifying, or endorsing any proprietary or specific design, or as limiting in any way the freedom of manufacturers, constructors, or owners to choose any method of design or any form of construction that conforms to the Standard.

(c) A proposed case shall be written as a question and reply in the same format as existing cases. The proposal shall also include the following information:

(1) a statement of need and background information

(2) the urgency of the case (e.g., the case concerns a project that is underway or imminent)

(3) the Standard and the paragraph, figure, or table number(s)

(4) the edition(s) of the Standard to which the proposed case applies

(d) A case is effective for use when the public review process has been completed and it is approved by the cognizant supervisory board. Approved cases are posted on the committee web page.

**Interpretations.** Upon request, the committee will issue an interpretation of any requirement of this Standard. An interpretation can be issued only in response to a request submitted through the online Interpretation Submittal Form at <http://go.asme.org/InterpretationRequest>. Upon submitting the form, the inquirer will receive an automatic e-mail confirming receipt.

ASME does not act as a consultant for specific engineering problems or for the general application or understanding of the Standard requirements. If, based on the information submitted, it is the opinion of the committee that the inquirer should seek assistance, the request will be returned with the recommendation that such assistance be obtained. Inquirers can track the status of their requests at <http://go.asme.org/Interpretations>.

ASME procedures provide for reconsideration of any interpretation when or if additional information that might affect an interpretation is available. Further, persons aggrieved by an interpretation may appeal to the cognizant ASME committee or subcommittee. ASME does not "approve," "certify," "rate," or "endorse" any item, construction, proprietary device, or activity.

Interpretations are published in the ASME Interpretations Database at <http://go.asme.org/Interpretations> as they are issued.

**Committee Meetings.** The NPPS Standards Committee regularly holds meetings that are open to the public. Persons wishing to attend any meeting should contact the secretary of the committee. Information on future committee meetings can be found on the committee web page at <https://go.asme.org/NPPScommittee>.

# SPECIFICATIONS LISTED BY MATERIALS

## **Chlorinated Polyvinyl Chloride (CPVC), Oriented Polyvinyl Chloride (PVCO), and Polyvinyl Chloride (PVC)**

SD-1784	Classification System and Basis for Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds .....	1
SD-1785	Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120 ..	7
SD-2241	Specification for Poly(Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series) .....	35
SD-2464	Specification for Threaded Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80	47
SD-2466	Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40 .....	53
SD-2467	Specification for Poly(Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80 .....	61
SD-2846/SD-2846M	Specification for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Hot- and Cold-Water Distribution Systems .....	105
SF-1483	Specification for Oriented Poly(Vinyl Chloride), PVCO, Pressure Pipe .....	321
SF-1970	Specification for Special Engineered Fittings, Appurtenances or Valves for Use in Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Systems .....	351
SF-437	Specification for Threaded Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 80 .....	251
SF-438	Specification for Socket-Type Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 40 .....	257
SF-439	Specification for Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 80 .....	265
SF-441/SF-441M	Specification for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe, Schedules 40 and 80 .....	273
SF-442/SF-442M	Specification for Chlorinated Poly(Vinyl Chloride) (CPVC) Plastic Pipe (SDR-PR) .....	283

## **Crosslinked Polyethylene (PEX)**

SF-2818	Specification for Crosslinked Polyethylene (PEX) Material Gas Pressure Pipe and Tubing	475
SF-2829/SF-2829M	Specification for Metric- and Inch-Sized Fittings for Crosslinked Polyethylene (PEX) Pipe	483
SF-2905/SF-2905M	Specification for Crosslinked Polyethylene (PEX) Line Pipe For Oil and Gas Producing Applications .....	501
SF-2929	Specification for Crosslinked Polyethylene (PEX) Tubing of 0.070 in. Wall and Fittings for Radiant Heating Systems Up to 75 psig .....	513

## **Perfluoro-Ethylene-Propylene Copolymer (FEP)**

SD-2116	Specification for FEP-Fluorocarbon Molding and Extrusion Materials .....	21
---------	--	----

## **Perfluoroalkoxy Alkane (PFA)**

SD-3307	Specification for Perfluoroalkoxy (PFA)-Fluorocarbon Resin Molding and Extrusion Materials .....	145
---------	--	-----

## **Polyamide (PA)**

SD-6779	Classification System for and Basis of Specification for Polyamide Molding and Extrusion Materials (PA) .....	235
SF-1733	Specification for Butt Heat Fusion Polyamide (PA) Plastic Fitting for Polyamide (PA) Plastic Pipe and Tubing .....	337
SF-2145	Specification for Polyamide 11 (PA 11) and Polyamide 12 (PA12) Mechanical Fittings for Use on Outside Diameter Controlled Polyamide 11 and Polyamide 12 Pipe and Tubing	359
SF-2600	Specification for Electrofusion Type Polyamide-11 Fittings for Outside Diameter Controlled Polyamide-11 Pipe and Tubing .....	383

SF-2767	Specification for Electrofusion Type Polyamide-12 Fittings for Outside Diameter Controlled Polyamide-12 Pipe and Tubing for Gas Distribution .....	423
SF-2785	Specification for Polyamide 12 Gas Pressure Pipe, Tubing, and Fittings .....	447
SF-2945	Specification for Polyamide 11 Gas Pressure Pipe, Tubing, and Fittings .....	525
SF-3524/SF-3524M	Specification for Polyamide-12 (PA12) Line Pipe .....	543

### **Polyethylene (PE)**

SD-2239	Specification for Polyethylene (PE) Plastic Pipe (SIDR-PR) Based on Controlled Inside Diameter .....	27
SD-2513	Specification for Polyethylene (PE) Gas Pressure Pipe, Tubing, and Fittings .....	71
SD-2683	Specification for Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe and Tubing .....	89
SD-2737	Specification for Polyethylene (PE) Plastic Tubing .....	97
SD-3035	Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Controlled Outside Diameter .....	119
SD-3261	Specification for Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing .....	135
SD-3350	Specification for Polyethylene Plastics Pipe and Fittings Materials .....	151

# INTRODUCTION

The ASME Standards for Nonmetallic Pressure Piping Systems (NPPS) are as follows:

- NM.1 Thermoplastic Piping Systems: This Standard contains requirements for piping and piping components that are produced using thermoplastic resins or compounds. Thermoplastics are a specific group of nonmetallic materials that, for processing purposes, are capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.
- NM.2 Fiber-Reinforced Thermosetting-Resin Piping Systems: This Standard contains requirements for piping and piping components that are produced using fiber reinforcement embedded in or surrounded by cured thermosetting resin.
- NM.3 Nonmetallic Materials: This Standard includes specifications for nonmetallic materials (except wood, nonfibrous glass, and concrete) and, in conformance with the requirements of the individual construction standards, methodologies, design values, limits, and cautions on the use of materials. This Standard is divided into three Parts:
  - NM.3.1, Nonmetallic Materials, Part 1 — Thermoplastic Material Specifications: This Part contains thermoplastic material specifications identical to or similar to those published by the American Society for Testing and Materials (ASTM International) and other recognized national or international organizations.
  - NM.3.2, Nonmetallic Materials, Part 2 — Reinforced Thermoset Plastic Material Specifications: This Part contains reinforced thermoset plastic material specifications identical to or similar to those published by ASTM and other recognized national or international organizations.
  - NM.3.3, Nonmetallic Materials, Part 3 — Properties: This Part provides tables and data sheets for allowable stresses, mechanical properties (e.g., tensile and yield strength), and physical properties (e.g., coefficient of thermal expansion and modulus of elasticity) for nonmetallic materials.

It is the owner's responsibility to select the piping standard that best applies to the proposed piping installation. Factors to be considered by the owner include limitations of the standard, jurisdictional requirements, and the applicability of other standards. All applicable requirements of the selected standard shall be met. For some installations, more than one standard may apply to different parts of the installation. The owner is also responsible for imposing requirements supplementary to those of the standard if such requirements are necessary to ensure safe piping for the proposed installation.

Certain piping within a facility may be subject to other codes and standards, including but not limited to the following:

- ASME B31.1, Power Piping: This code contains requirements for piping typically found in electric power generating stations, industrial and institutional plants, geothermal heating systems, and central and district heating and cooling systems.
- ASME B31.3, Process Piping: This code contains requirements for piping typically found in petroleum refineries; onshore and offshore petroleum and natural gas production facilities; chemical, pharmaceutical, textile, paper, ore-processing, semiconductor, and cryogenic plants; food- and beverage-processing facilities; and related processing plants and terminals.
- ASME B31.4, Pipeline Transportation Systems for Liquids and Slurries: This code contains requirements for piping transporting products that are predominately liquid between plants and terminals, and within terminals and pumping, regulating, and metering stations.
- ASME B31.5, Refrigeration Piping and Heat Transfer Components: This code contains requirements for piping for refrigerants and secondary coolants.
- ASME B31.8, Gas Transmission and Distribution Piping Systems: This code contains requirements for piping transporting products that are predominately gas between sources and terminals, including compressor, regulating, and metering stations; and gas gathering pipelines.
