

Australian/New Zealand Standard™

**Anhydrous ammonia—Storage and  
handling**

### **AS/NZS 2022:2003**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee ME-032, Anhydrous Ammonia Storage and Handling. It was approved on behalf of the Council of Standards Australia on 28 February 2003 and on behalf of the Council of Standards New Zealand on 5 March 2003. It was published on 25 March 2003.

---

The following are represented on Committee ME-032:

Australian Chamber of Commerce and Industry  
Australasian Fire Authorities Council  
Australian Industrial Gas Manufacturers Association  
Department for Administrative and Information Services, S.A.  
New Zealand chemical Industry Council  
Plastics and Chemical Industries Association  
Victorian WorkCover Authority  
WorkCover New South Wales

---

#### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Australia web site at [www.standards.com.au](http://www.standards.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revision, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee ME-032, Anhydrous Ammonia Storage and Handling to supersede AS 2022—1983, *Anhydrous ammonia—Storage and handling (known as the SAA Anhydrous Ammonia Code)*.

*This Standard incorporates Amendment No. 1 (December 2003). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.*

The objective of this Standard is to provide distributors and users with procedures for the safe storage and handling of anhydrous ammonia.

In addition to the updating of the list of reference documents and editorial changes, in accordance with current policy, the following changes have been included in this edition.

- (a) Reference to AS/NZS 3788 for pressure vessel inspections.
- (b) Reduction in test pressure and increase in frequency for the testing of flexible hoses.
- (c) Changes to the requirements for personal protective equipment during transfer operations.
- (d) Alignment with the Australian Dangerous Goods Code, as appropriate.
- (e) Addition of requirements for emergency shut down and drive-away protection systems.
- (f) Addition of requirements for the management of emergencies.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

## STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

---

**Australian/New Zealand Standard**  
**Anhydrous ammonia—Storage and handling**

---

## SECTION 1 SCOPE AND GENERAL

**1.1 SCOPE**

This Standard specifies requirements for the design, repair, alteration, location, installation and operation of plant used for the storage, handling and transport of anhydrous ammonia in industrial and rural situations.

This Standard is not applicable to—

- (a) ammonia manufacturing plants;
- (b) manufacturing plants and other systems involving the use of ammonia; and
- (c) refrigeration systems, where anhydrous ammonia is used solely as a refrigerant.

The storage, handling and transport of anhydrous ammonia associated with these plants are not excluded.

NOTE: A guide to the properties of anhydrous ammonia is given in Appendix A.

**1.2 REFERENCED DOCUMENTS**

The documents listed in the Appendix B are referred to in the Standard.

**1.3 DEFINITIONS**

For the purpose of this Standard, the definitions given in AS 4942 and those below apply.

**1.3.1 Authorized person**

A person specifically appointed by an anhydrous ammonia distributor or the distributor's agent to perform the duties of that position.

**1.3.2 Capacity (of a tank, cylinder or drum)**

The total volume of the space enclosed within the tank or cylinder, expressed in litres or cubic metres.

NOTES:

- 1 This is synonymous with and numerically equal to water capacity.
- 2 Capacity is sometimes expressed as the equivalent mass of water.

**1.3.3 Container**

A cylinder or tank specifically designed and constructed for the storage or transport of anhydrous ammonia.

**1.3.4 Depot**

A stationary anhydrous ammonia storage system, including the container or containers, container fittings and the ancillary equipment essential for the safe operation of the system.

**1.3.5 Filler**

A competent person authorized to fill containers with anhydrous ammonia.
