

Australian/New Zealand Standard™

Test methods for solar collectors

**Part 1: Thermal performance of glazed
liquid heating collectors including
pressure drop (ISO 9806-1:1994, MOD)**

AS/NZS 2535.1:2007

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee CS-028, Solar Water Heaters. It was approved on behalf of the Council of Standards Australia on 22 December 2006 and on behalf of the Council of Standards New Zealand on 19 January 2007.

This Standard was published on 7 March 2007.

The following are represented on Committee CS-028:

Australian Chamber of Commerce and Industry
Australian Electrical and Electronic Manufacturers Association
Australian Industry Group
Australian and New Zealand Solar Energy Society
Department of Energy, Utilities and Sustainability (NSW)
Energy Efficiency & Conservation Authority of New Zealand
Gas Appliance Manufacturers Association of Australia
Institution of Professional Engineers New Zealand
James Cook University
Master Plumbers, Gasfitters and Drainlayers New Zealand
New Zealand Solar Industries Association
Office of the Renewable Energy Regulator
Plastics and Chemicals Industries Association
Sustainability Victoria
University of New South Wales

Keeping standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

including pressure drop (ISO 9806-1:1994, MOD)**

RECONFIRMATION NOTICE

Technical Committee CS-028 has reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 22 August 2019.

Approved for reconfirmation in New Zealand on behalf of the New Zealand Standards Approval Board on 18 June 2020.

The following are represented on Technical Committee CS-028:

Australian Building Codes Board
Australian Chamber of Commerce and Industry
Australian Industry Group
Australian Institute of Refrigeration Air Conditioning and Heating
Clean Energy Council
Consumer Electronic Suppliers Association
CSIRO
Electrical Compliance Testing Association of Australia
Gas Appliance Manufacturers Association of Australia
James Cook University
Master Plumbers, Gasfitters and Drainlayers New Zealand
New Zealand Green Building Council
Smart Energy Council
Solar Association of New Zealand
The University of New South Wales
University of South Australia

Jointly published by SAI Global Limited under licence from Standards Australia Limited, GPO Box 476, Sydney, NSW 2001 and by Standards New Zealand, Private Bag 2439, Wellington 6140.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee CS-028, Solar Water Heaters, to supersede AS/NZS 2535.1:1999, *Test methods for solar collectors—Thermal performance of glazed liquid heating collectors including pressure drop*.

This Standard incorporates Amendment No. 1 (August 2014). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

The objective of this Standard is to provide uniform test methods for the thermal performance of glazed liquid heating collectors.

This Standard is an adoption with national modifications and has been reproduced from ISO 9806:1994, *Test methods for solar collectors, Part 1: Thermal performance of glazed liquid heating collectors including pressure drop*, and has been varied as indicated to take account of Australian/New Zealand conditions. The modification is listed in Annex A. Annex ZB provides additional test requirements for the ‘Outdoor steady-state efficiency’ test of Clause 8.4 and the informative annexes ZB, ZC, ZD and ZE provide additional equations to cover a broad range of conditions.

As this Standard is reproduced from an international standard, the following applies:

- (a) its number appears on the cover and title page while the international standard number appears only on the cover
- (b) In the source text ‘ISO 9806-1’ should read ‘AS/NZS 2535.1’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
ISO		AS/NZS	
9459-1	Solar heating—Domestic water heating system—Part 1: Performance rating procedure using indoor test methods	4445.1	Solar heating—Domestic water heating systems—Performance rating procedure using indoor test methods

This Standard is not intended to be a mandatory replacement for any performance rating test methods already in use in Australia or in New Zealand.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

CONTENTS

1	Scope	1
2	Normative references	1
3	Definitions	2
4	Symbols and units	4
5	Collector mounting and location	4
6	Instrumentation	5
7	Test installation	1
8	Outdoor steady-state efficiency test	3
9	Steady-state efficiency test using a solar irradiance simulator	19
10	Determination of the effective thermal capacity and the time constant of a collector	22
11	Collector incident angle modifier	24
12	Determination of the pressure drop across a collector	26
Annexes		
A	Format sheets for test data	28
B	Collector characteristics	46
C	Solar spectrum	51
D	Properties of water	52
E	Measurement of effective thermal capacity	53
F	Biaxial incident angle modifiers	56
G	Bibliography	58
ZA	Variations to ISO 9806-1:1994 for application in Australia and New Zealand	61
ZB	Additional test requirements for outdoor steady-state efficiency test	62
ZC	Additional information for Australian and New Zealand use	63
ZD	Derivation of the collector efficiency characteristic	65
ZE	Derivation of correction factor	68
ZF	Notation for equations in Annexes ZC, ZD, ZE and ZF	71

STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

Test methods for solar collectors—**Part 1: Thermal performance of glazed liquid heating collectors including pressure drop (ISO 9806-1:1994, MOD)****1 Scope**

1.1 This part of ISO 9806 establishes methods for determining the thermal performance of glazed liquid heating solar collectors. These tests are intended for use as part of the sequence of tests specified in ISO 9806-2.

1.2 This part of ISO 9806 provides test methods and calculation procedures for determining the steady-state and quasi-steady-state thermal performance of solar collectors. It contains methods for conducting tests outdoors under natural solar irradiance and for conducting tests indoors under simulated solar irradiance.

1.3 This part of ISO 9806 is not applicable to those collectors in which the thermal storage unit is an integral part of the collector to such an extent that the collection process cannot be separated for the purpose of making measurements of these two processes.

1.4 This part of ISO 9806 is not applicable to unglazed solar collectors nor is it applicable to tracking concentrating solar collectors. (See ISO 9806-3 for a test method for unglazed collectors.)

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 9806. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this part of ISO 9806 are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 9060:1990, *Solar energy — Specification and classification of instruments for measuring hemispherical solar and direct solar radiation.*

ISO 9459-1:1993, *Solar heating — Domestic water heating systems — Part 1: Performance rating procedure using indoor test methods.*

ISO 9806-2:—¹⁾, *Test methods for solar collectors — Part 2: Qualification test procedures.*
