Directory Service for Telecommunications Management  
Network (TMN) and  
Synchronous Optical Network (SONET)

AMERICAN NATIONAL STANDARD FOR TELECOMMUNICATIONS

As a leading technology and solutions development organization, the Alliance for Telecommunications Industry Solutions (ATIS) brings together the top global ICT companies to advance the industry's most pressing business priorities. ATIS' nearly 200 member companies are currently working to address the All-IP transition, 5G, network functions virtualization, big data analytics, cloud services, device solutions, emergency services, M2M, cyber security, network evolution, quality of service, billing support, operations, and much more. These priorities follow a fast-track development lifecycle — from design and innovation through standards, specifications, requirements, business use cases, software toolkits, open source solutions, and interoperability testing.

ATIS is accredited by the American National Standards Institute (ANSI). The organization is the North American Organizational Partner for the 3rd Generation Partnership Project (3GPP), a founding Partner of the oneM2M global initiative, a member of the International Telecommunication Union (ITU), as well as a member of the Inter-American Telecommunication Commission (CITEL). For more information, visit [www.atis.org](http://www.atis.org).

**AMERICAN NATIONAL STANDARD**

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

**CAUTION NOTICE:** This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

**Notice of Disclaimer & Limitation of Liability**

The information provided in this document is directed solely to professionals who have the appropriate degree of experience to understand and interpret its contents in accordance with generally accepted engineering or other professional standards and applicable regulations. No recommendation as to products or vendors is made or should be implied.

NO REPRESENTATION OR WARRANTY IS MADE THAT THE INFORMATION IS TECHNICALLY ACCURATE OR SUFFICIENT OR CONFORMS TO ANY STATUTE, GOVERNMENTAL RULE OR REGULATION, AND FURTHER, NO REPRESENTATION OR WARRANTY IS MADE OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. ATIS SHALL NOT BE LIABLE, BEYOND THE AMOUNT OF ANY SUM RECEIVED IN PAYMENT BY ATIS FOR THIS DOCUMENT, AND IN NO EVENT SHALL ATIS BE LIABLE FOR LOST PROFITS OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES. ATIS EXPRESSLY ADVISES THAT ANY AND ALL USE OF OR RELIANCE UPON THE INFORMATION PROVIDED IN THIS DOCUMENT IS AT THE RISK OF THE USER.

NOTE - The user's attention is called to the possibility that compliance with this standard may require use of an invention covered by patent rights. By publication of this standard, no position is taken with respect to whether use of an invention covered by patent rights will be required, and if any such use is required, no position is taken regarding the validity of this claim or any patent rights in connection therewith. Please refer to [<http://www.atis.org/legal/patentinfo.asp>] to determine if any statement has been filed by a patent holder indicating a willingness to grant a license either without compensation or on reasonable and non-discriminatory terms and conditions to applicants desiring to obtain a license.

**ATIS-0300245.2019, Directory Service for Telecommunications Management Network (TMN) and Synchronous Optical Network (SONET)**

Is an American National Standard developed by the **ATIS Telecom Management and Operations Committee (TMOC)**.

American National Standard for Telecommunications

**Directory Service for Telecommunications Management  
Network (TMN) and  
Synchronous Optical Network (SONET)**

**Alliance for Telecommunications Industry Standards**

Approved August 1, 2019

**American National Standards Institute, Inc.**

**Abstract**

This standard specifies the usage of the X.500 Directory, protocols, and services for communications between Directory Users and Directory Servers. These specifications are for use of the Directory in support of management communications within the Telecommunications Management Network (TMN), and for specific technologies, such as Synchronous Optical Network (SONET).

## Foreword

---

The information contained in this Foreword is not part of this American National Standard (ANS) and has not been processed in accordance with ANSI's requirements for an ANS. As such, this Foreword may contain material that has not been subjected to public review or a consensus process. In addition, it does not contain requirements necessary for conformance to the Standard.

As a leading technology and solutions development organization, the Alliance for Telecommunications Industry Solutions (ATIS) brings together the top global information and communications technology (ICT) companies to advance the industry's most-pressing business priorities. ATIS serves the public through improved understanding between carriers, customers, and manufacturers. The Telecom Management and Operations Committee (TMOC) develops operations, administration, maintenance and provisioning standards, and other documentation related to Operations Support System (OSS) and Network Element (NE) functions and interfaces for communications networks - with an emphasis on standards development related to U.S.A. communication networks in coordination with the development of international standards.

ANSI guidelines specify two categories of requirements: mandatory and recommendation. The mandatory requirements are designated by the word *shall* and recommendations by the word *should*. Where both a mandatory requirement and a recommendation are specified for the same criterion, the recommendation represents a goal currently identifiable as having distinct compatibility or performance advantages.

Suggestions for improvement of this document are welcome. They should be sent to the Alliance for Telecommunications Industry Solutions, TMOC, 1200 G Street NW, Suite 500, Washington, DC 20005.

At the time of consensus on this document, TMOC, which was responsible for its development, had the following leadership:

- P. Galarza, TMOC Chair (iconectiv)
- T. Barrett, Technical Editor (AT&T)

ATIS Standard on –

# Directory Service for Telecommunications Management Network (TMN) and Synchronous Optical Network (SONET)

## 1 Scope

Directory Service provides a means for locating essential information about network resources and their attributes. A directory service can avoid the cumbersome task of locating resources and services needed to handle the growth of interconnected networks, which are increasing in size, complexity, and diverse requirements. The ITU-T Recommendation X.500 Directory provides a general information sharing service utilizing a set of communication protocol facilities and a global name management infrastructure.

This standard specifies the usage of the ITU-T Recommendation X.500 Directory Service within the *Telecommunications Management Network (TMN)*. The ITU-T Recommendation X.500 Directory operates in an *Open Systems Interconnection (OSI)* environment and uses the *Association Control Service Element (ACSE)* and *Remote Operations Service Element (ROSE)* of the OSI application layer. Additionally, implementations supporting replication use the *Reliable Transfer Service Element (RTSE)* of the OSI application layer.

This standard identifies the Directory Services needs of the TMN and addresses the Directory Service support for name to address mapping, specifically for an *Application Entity (AE)* title to facilitate association set up. This standard also examines some requirements for the *Synchronous Optical Network (SONET)* as a specific technology example in particular, including SONET transmission network elements (e.g., broadband cross-connects, wideband cross-connects, lightwave systems, add-drop multiplexers, repeaters, digital loop carriers, etc.) and SONET management systems (e.g., operation systems, mediation devices, element managers, etc.) that connect to the SONET *Data Communications Network (DCN)*. Additional Directory Services needs for SONET and other specific technologies may be identified in the future. This standard serves as a basis for future extension of the usage of ITU-T Recommendation X.500 Directory Service for sharing information needed in the TMN for management of networks. This standard specifies Directory replication and use of *Back-Up Directory Server (B-DS)* as alternate methods for enhancing the reliability of the Directory Service.

This standard for Directory Service for TMN does not rely on any other profile, as no suitable *International Standardized Profile (ISP)* yet exists for the ITU-T X.500 series of Recommendations upon which this standard is based. The model for the Directory Service for TMN is the model in *International Telecommunication Union – Telecommunication Standardization Sector (ITU-T) Recommendation X.501*, with the addition of a *Registration Manager (RM)* and *Registration Agent (RA)* to handle automatic registration of *Network Element (NE)* entries into the Directory under certain conditions.

The protocols for the TMN Directory Service are the *Directory Access Protocol (DAP)*, *Directory System Protocol (DSP)*, *Directory Information Shadowing Protocol (DISP)*, and *Directory Operational Binding Management Protocol (DOP)* protocols specified in the X.500 series of ITU-T Recommendations. These protocols are to be used in conformance to the ITU-T X.500 Recommendations. Only the DAP is fully

addressed in this standard, and its profile is provided in Annex B.<sup>1</sup> The profiles for DSP, DISP, and DOP are planned to be added to this TMN Directory standard as needed in future expansions. A *Registration Request Protocol* (RRP) has been added for automatic registration. The application and profiling of DISP and DOP are for further study. This standard also does not fully address security.

The Directory object classes and attributes profiled for use in TMN are a subset of those defined in ITU-T Recommendations X.521 and X.520, plus a small number of TMN-specific objects and attributes defined here for the purposes of representing Network Elements and Operations Systems. This standard also identifies a set of structural object classes, their naming rules, and their naming attributes specified in the X.500 Recommendations. This is the minimum that shall be supported within the *Directory Information Tree* (DIT) commonly used within the TMN.
