**Recommended Maintenance Routines and Frequencies
for Central Office Backup Power**

AMERICAN NATIONAL STANDARD FOR TELECOMMUNICATIONS

As a leading technology and solutions development organization, the Alliance for Telecommunications Industry Solutions (ATIS) brings together the top global ICT companies to advance the industry's most pressing business priorities. ATIS' nearly 200 member companies are currently working to address the All-IP transition, 5G, network functions virtualization, big data analytics, cloud services, device solutions, emergency services, M2M, cyber security, network evolution, quality of service, billing support, operations, and much more. These priorities follow a fast-track development lifecycle — from design and innovation through standards, specifications, requirements, business use cases, software toolkits, open source solutions, and interoperability testing.

ATIS is accredited by the American National Standards Institute (ANSI). The organization is the North American Organizational Partner for the 3rd Generation Partnership Project (3GPP), a founding Partner of the oneM2M global initiative, a member of the International Telecommunication Union (ITU), as well as a member of the Inter-American Telecommunication Commission (CITEI). For more information, visit www.atis.org.

AMERICAN NATIONAL STANDARD

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether it has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Notice of Disclaimer & Limitation of Liability

The information provided in this document is directed solely to professionals who have the appropriate degree of experience to understand and interpret its contents in accordance with generally accepted engineering or other professional standards and applicable regulations. No recommendation as to products or vendors is made or should be implied.

NO REPRESENTATION OR WARRANTY IS MADE THAT THE INFORMATION IS TECHNICALLY ACCURATE OR SUFFICIENT OR CONFORMS TO ANY STATUTE, GOVERNMENTAL RULE OR REGULATION AND FURTHER, NO REPRESENTATION OR WARRANTY IS MADE OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. ATIS SHALL NOT BE LIABLE, BEYOND THE AMOUNT OF ANY SUM RECEIVED IN PAYMENT BY ATIS FOR THIS DOCUMENT, AND IN NO EVENT SHALL ATIS BE LIABLE FOR LOST PROFITS OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES. ATIS EXPRESSLY ADVISES THAT ANY AND ALL USE OF OR RELIANCE UPON THE INFORMATION PROVIDED IN THIS DOCUMENT IS AT THE RISK OF THE USER.

NOTE - The user's attention is called to the possibility that compliance with this standard may require use of an invention covered by patent rights. By publication of this standard, no position is taken with respect to whether use of an invention covered by patent rights will be required, and if any such use is required no position is taken regarding the validity of this claim or any patent rights in connection therewith. Please refer to [<http://www.atis.org/legal/patentinfo.asp>] to determine if any statement has been filed by a patent holder indicating a willingness to grant a license either without compensation or on reasonable and non-discriminatory terms and conditions to applicants desiring to obtain a license.

ATIS-0600035.2018(R2023), Recommended Maintenance Routines and Frequencies for Central Office Backup Power

Is an American National Standard developed by the ATIS **Sustainability in Telecom: Energy and Protection (STEP) Committee**

American National Standard for Telecommunications

Recommended Maintenance Routines and Frequencies for Central Office Backup Power

Alliance for Telecommunications Industry Solutions

Approved July 17, 2018

American National Standards Institute, Inc.

Abstract

This document is a guideline, recommending a baseline set of routines along with maintenance intervals (frequency) for central office back up power.

Foreword

The information contained in this Foreword is not part of this American National Standard (ANS) and has not been processed in accordance with ANSI's requirements for an ANS. As such, this Foreword may contain material that has not been subjected to public review or a consensus process. In addition, it does not contain requirements necessary for conformance to the Standard.

The Alliance for Telecommunication Industry Solutions (ATIS) serves the public through improved understanding between carriers, customers, and manufacturers. The Alliance for Telecommunication Industry Solutions (ATIS) serves the public through improved understanding between providers, customers, and manufacturers. The Sustainability in Telecom: Energy and Protection (STEP) Committee – formerly the Network Interface, Power, and Protection Committee (NIPP) – engages industry expertise to develop standards and technical reports for telecommunications equipment and environments in the areas of energy efficiency, environmental impacts, power and protection. The work products of STEP enable vendors, operators and their customers to deploy and operate reliable, environmentally sustainable, energy efficient communications technologies. STEP is committed to proactive engagement with national, regional and international standards development organizations and forums that share its scope of work.

ANSI guidelines specify two categories of requirements: mandatory and recommendation. The mandatory requirements are designated by the word *shall* and recommendations by the word *should*. Where both a mandatory requirement and a recommendation are specified for the same criterion, the recommendation represents a goal currently identifiable as having distinct compatibility or performance advantages.

Suggestions for improvement of this document are welcome. They should be sent to the Alliance for Telecommunications Industry Solutions, STEP, 1200 G Street NW, Suite 500, Washington, DC 20005.

At the time of consensus on this document, STEP, which was responsible for its development, had the following leadership:

- E. Gallo, STEP Chair and STEP NPS Vice Chair [Ericsson]
- J. Fuller, STEP Vice Chair [AT&T]
- J. Jackson, STEP NPS Chair [AT&T]
- T. Berguetski, Technical Editor [CenturyLink]

The Network Power Systems (NPS) Subcommittee was responsible for the development of this document.

American National Standard for Telecommunications on –

Recommended Maintenance Routines and Frequencies for Central Office Backup Power

1 Scope, Purpose, & Application

1.1 Scope

This guidance document recommends a baseline set of routines along with maintenance intervals (frequency) for central office back up power.

1.2 Purpose

While the Communications Security, Reliability and Interoperability Council (CSRIC) Best Practices include some recommendations for engine-alternator maintenance in telecommunications central offices and Telcordia GR-513-CORE contains suggested frequencies (as well as some specific routines) for battery, inverter, and engine routines; there are no comprehensive guidelines for telecommunications power equipment maintenance routines and frequencies. Further complicating the issue is that there are other existing standards primarily designed for other industries that suggest maintenance activities that are far too frequent for telecommunications needs. For example, NFPA 110 is primarily designed for emergency engine-alternators used in life support applications (like hospitals) where there are no alternatives or secondary means to provide the required service. Communications networks and services are usually designed with duplicate pathways and alternative means (e.g., batteries plus standby engines) to circumvent single point failures. The weekly test routine requirements stated in NFPA 110 for such life-support engines far exceed FCC-recognized (CSRIC) Best Practices. Engine alternators deployed in central office applications are considered NFPA 110 Level 2. In a similar vein, manufacturers make similar products (such as engine-alternators and batteries) for differing industries, and what might be a good maintenance frequency or routine for one application (such as battery maintenance for critical backup systems at a nuclear generating station) might be excessive for another application (e.g., a telecommunications central office) into which the same battery is sold. The manufacturer's guidelines for maintenance are generally forced to err on the side of the most frequent maintenance applications and routines, resulting in an unnecessary waste of resources. For this reason, these guidelines provide some useful maintenance frequencies and baseline routines specific to telecommunications Central Office backup power systems.

1.3 Application

These recommendations are applicable to central offices (they are not applicable to remote terminals, data centers, customer premises locations, etc.), and are the minimum suggested intervals, with the understanding that individual operating companies, State and/or local authorities may require more frequent intervals than those cited in this document.

Appropriate safety precautions shall be observed during the maintenance routines described in this standard for work activities near, on, and in the vicinity of powered equipment and charged batteries. Activities shall only be conducted by qualified, trained, and experienced individuals using appropriate PPE (personal protection Equipment) for the task.
