

ATIS-0700036

ATIS Standard on -

**Enhanced Wireless Emergency Alert (eWEA) Mobile  
Device Behavior (MDB) Specification  
(A Revised Version of J-STD-100)**

As a leading technology and solutions development organization, the Alliance for Telecommunications Industry Solutions (ATIS) brings together the top global ICT companies to advance the industry's most pressing business priorities. ATIS' nearly 200 member companies are currently working to address the All-IP transition, 5G, network functions virtualization, big data analytics, cloud services, device solutions, emergency services, M2M, cyber security, network evolution, quality of service, billing support, operations, and much more. These priorities follow a fast-track development lifecycle — from design and innovation through standards, specifications, requirements, business use cases, software toolkits, open source solutions, and interoperability testing.

ATIS is accredited by the American National Standards Institute (ANSI). The organization is the North American Organizational Partner for the 3rd Generation Partnership Project (3GPP), a founding Partner of the oneM2M global initiative, a member of the International Telecommunication Union (ITU), as well as a member of the Inter-American Telecommunication Commission (CITEL). For more information, visit [www.atis.org](http://www.atis.org).

### Notice of Disclaimer & Limitation of Liability

The information provided in this document is directed solely to professionals who have the appropriate degree of experience to understand and interpret its contents in accordance with generally accepted engineering or other professional standards and applicable regulations. No recommendation as to products or vendors is made or should be implied.

NO REPRESENTATION OR WARRANTY IS MADE THAT THE INFORMATION IS TECHNICALLY ACCURATE OR SUFFICIENT OR CONFORMS TO ANY STATUTE, GOVERNMENTAL RULE OR REGULATION, AND FURTHER, NO REPRESENTATION OR WARRANTY IS MADE OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. ATIS SHALL NOT BE LIABLE, BEYOND THE AMOUNT OF ANY SUM RECEIVED IN PAYMENT OF FEES FOR THIS DOCUMENT, AND IN NO EVENT SHALL ATIS BE LIABLE FOR LOST PROFITS OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES. ATIS EXPRESSLY ADVISES THAT ANY AND ALL USE OF OR RELIANCE UPON THE INFORMATION PROVIDED IN THIS DOCUMENT IS AT THE RISK OF THE USER.

NOTE - The user's attention is called to the possibility that compliance with this standard may require use of an invention covered by patent rights. By publication of this standard, no position is taken with respect to whether use of an invention covered by patent rights will be required, and if any such use is required no position is taken regarding the validity of this claim or any patent rights in connection therewith. Please refer to [<http://www.atis.org/legal/patentinfo.asp>] to determine if any statement has been made by a patent holder indicating a willingness to grant a license either without compensation or on reasonable and non-discriminatory terms and conditions to applicants desiring to obtain a license.

**Enhanced Wireless Emergency Alert (eWEA) Mobile Device  
Behavior (MDB) Specification  
(A Revised Version of J-STD-100)**

**Alliance for Telecommunications Industry Solutions**

Approved May 2018

**Abstract**

This specification defines a common set of requirements for GSM, UMTS and LTE-based mobile devices. Implementation of the requirements contained within this specification is mobile device manufacturer dependent. This ATIS specification supersedes *J-STD-100 Joint ATIS/TIA CMAS Mobile Device Behavior Specification* and the associated J-STD-100 Supplements for 3G, 2 technologies. This Standard supports the requirements of the FCC Report & Order 16-127 and the FCC Order on Reconsideration 17-143.

## Foreword

---

The Alliance for Telecommunication Industry Solutions (ATIS) serves the public through improved understanding between carriers, customers, and manufacturers. The Wireless Technologies and Systems Committee (WTSC) develops and recommends standards and technical reports related to wireless and/or mobile services and systems, including service descriptions and wireless technologies. WTSC develops and recommends positions on related subjects under consideration in other North American, regional, and international standards bodies.

The mandatory requirements are designated by the word shall and recommendations by the word should. Where both a mandatory requirement and a recommendation are specified for the same criterion, the recommendation represents a goal currently identifiable as having distinct compatibility or performance advantages. The word may denotes an optional capability that could augment the standard. The standard is fully functional without the incorporation of this optional capability.

This ATIS Standard is a revision of J-STD-100, Joint ATIS/TIA CMAS Mobile Device Behavior Specification, and its Supplement A in J-STD-100.a and Supplement B in ATIS-0700032.

Suggestions for improvement of this document are welcome. They should be sent to the Alliance for Telecommunications Industry Solutions, WTSC, 1200 G Street NW, Suite 500, Washington, DC 20005.

At the time of consensus on this document, WTSC, which was responsible for its development, had the following leadership:

- D. Zelmer, WTSC Chair (AT&T)
- M. Younge, WTSC Vice Chair (T-Mobile)
- P. Musgrove, WTSC SN Chair (AT&T)
- G. Schumacher, WTSC SN Vice Chair (Sprint)
- D. Sennett, Technical Editor (AT&T)

The Systems & Networks (SN) subcommittee was responsible for the development of this document.

ATIS Standard on –

# Enhanced Wireless Emergency Alert (eWEA) Mobile Device Behavior (MDB) Specification (a revised version of J-STD-100)

## Preface

The authority-to-individual emergency alerting capability to mobile devices was originally called Commercial Mobile Alert System (CMAS) in the first three Reports and Orders from the FCC. This standard was originally developed based upon the CMAS terminology and CMAS was operational in April 2012. However, in February 2013, the Federal Communications Commission (FCC) renamed the Commercial Mobile Alert System (CMAS) to Wireless Emergency Alerts (WEA) with associated updates to the appropriate sections of Part 11 of the 47 Code of Federal Regulations (CFR). Subsequently, the FCC has issued additional enhancements and rules for this government-to-individual emergency alerting capability to mobile devices, and these are identified as modifications to WEA.

Consequently, this specification may use both the term CMAS and the term WEA. These terms should be considered as equivalent terms, with WEA being the preferred term.

This ATIS specification is the Enhanced Wireless Emergency Alert (eWEA) standard for the WEA mobile device behavior and is based upon the WEA enhancements identified in the September 2016 FCC Report & Order on WEA Enhancements, FCC 16-127 [Ref 9]. This ATIS specification supersedes J-STD-100, *Joint ATIS/TIA CMAS Mobile Device Behavior Specification*, and the associated J-STD-100 Supplements. Any assumptions, requirements, and principles from J-STD-100 and the associated J-STD-100 Supplements applicable in eWEA are included in this ATIS specification.

## 1 Scope, Purpose, & Application

### 1.1 Scope

One of the objectives of this eWEA specification is to define a set of requirements for the behavior of the mobile devices whenever an eWEA alert message is received. This specification defines a common set of requirements for Global System for Mobile Communications (GSM), Universal Mobile Telecommunication System (UMTS), and Long-Term Evolution (LTE) based mobile devices. Implementation of the requirements contained within this specification is mobile device manufacturer dependent.

The support of 5G and beyond is outside the scope of this specification.

Even though the scope of eWEA includes paging systems, the behavior of paging devices for eWEA alert messages is not contained within this specification.

### 1.2 Purpose

The purpose of this specification is to define the eWEA set of common requirements for GSM, UMTS, and LTE based mobile devices behavior whenever an eWEA alert message is received and processed. This eWEA mobile device behavior specification is based upon the WEA enhancements identified in the September 2016 FCC Report & Order on WEA Enhancements, FCC 16-127 [Ref 9].

Any assumptions, requirements, and principles from *J-STD-100 Joint ATIS/TIA CMAS Mobile Device Behavior Specification* and the associated J-STD-100 Supplements which are applicable to eWEA are included in this ATIS specification.

A common set of eWEA requirements for the mobile device behavior will allow for a consistent user experience regardless of the associated wireless technology of the mobile device. Additionally, this common set of eWEA requirements for the mobile device behavior will allow the various local, state, and Federal level government agencies to develop user eWEA educational information that is independent of the wireless technology.
