Integrated Services Digital Network (ISDN) – Circuit-Mode
Bearer Service Category Description

AMERICAN NATIONAL STANDARD FOR TELECOMMUNICATIONS

ATIS is the leading technical planning and standards development organization committed to the rapid development of global, market-driven standards for the information, entertainment and communications industry. More than 200 companies actively formulate standards in ATIS' Committees and Forums, covering issues including: IPTV, Cloud Services, Energy Efficiency, IP-Based and Wireless Technologies, Quality of Service, Billing and Operational Support, Emergency Services, Architectural Platforms and Emerging Networks. In addition, numerous Incubators, Focus and Exploratory Groups address evolving industry priorities including Smart Grid, Machine-to-Machine, Connected Vehicle, IP Downloadable Security, Policy Management and Network Optimization.

ATIS is the North American Organizational Partner for the 3rd Generation Partnership Project (3GPP), a member and major U.S. contributor to the International Telecommunication Union (ITU) Radio and Telecommunications Sectors, and a member of the Inter-American Telecommunication Commission (CITEL). ATIS is accredited by the American National Standards Institute (ANSI). For more information, please visit < www.atis.org >.

AMERICAN NATIONAL STANDARD

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made towards their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Notice of Disclaimer & Limitation of Liability

The information provided in this document is directed solely to professionals who have the appropriate degree of experience to understand and interpret its contents in accordance with generally accepted engineering or other professional standards and applicable regulations. No recommendation as to products or vendors is made or should be implied.

NO REPRESENTATION OR WARRANTY IS MADE THAT THE INFORMATION IS TECHNICALLY ACCURATE OR SUFFICIENT OR CONFORMS TO ANY STATUTE, GOVERNMENTAL RULE OR REGULATION, AND FURTHER, NO REPRESENTATION OR WARRANTY IS MADE OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR AGAINST INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. ATIS SHALL NOT BE LIABLE, BEYOND THE AMOUNT OF ANY SUM RECEIVED IN PAYMENT BY ATIS FOR THIS DOCUMENT, AND IN NO EVENT SHALL ATIS BE LIABLE FOR LOST PROFITS OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES. ATIS EXPRESSLY ADVISES THAT ANY AND ALL USE OF OR RELIANCE UPON THE INFORMATION PROVIDED IN THIS DOCUMENT IS AT THE RISK OF THE USER.

NOTE - The user's attention is called to the possibility that compliance with this standard may require use of an invention covered by patent rights. By publication of this standard, no position is taken with respect to whether use of an invention covered by patent rights will be required, and if any such use is required no position is taken regarding the validity of this claim or any patent rights in connection therewith.

ATIS-1000620.1991(R2012), Integrated Services Digital Network (ISDN) – Circuit Mode Bearer Service Category Description

Is an American National Standard developed by the **Signaling, Architecture, and Control (SAC)** Subcommittee under the **ATIS Packet Technologies and Systems Committee (PTSC)**.

American National Standard
for Telecommunications –

Integrated Services
Digital Network (ISDN) –
Circuit-Mode Bearer Service
Category Description

Secretariat

Exchange Carriers Standards Association

Approved December 19, 1991

American National Standards Institute, Inc.

Abstract

This standard explains the ISDN Circuit-Mode Bearer Services from the user's perspective. It covers on-demand and circuit-mode 64-kbit/s services and on demand H_0 , H_{10} , and H_{11} channels. This standard is based on the CCITT Recommendations I.220, I.230, and I.231 and applies to both ISDN Basic Rate Access and ISDN Primary Rate Access. It provides the service user with a description of what these services provide as well as possible options. This description also provides the basis for the division of functionality and subsequent development of standardized protocols to support this service.

Foreword (This foreword is not part of American National Standard T1.620-1991.)

This standard explains the ISDN Circuit-Mode Bearer services from the user's perspective. The scope of this standard is limited to on-demand circuit-mode 64-kbit/s services and on-demand H₀, H₁₀, and H₁₁ channels. This standard is based on the CCITT Recommendations I.220, I.230, and I.231. This standard does not specify the actual human interface to the end equipment being used to support the provision of the service. It does not show how the required functionality should be split between customer and network equipment. It also does not cover the protocol that will be necessary for implementing this service in a standard way.

This standard was developed over the past few years by Technical Subcommittee T1S1 of Accredited Standards Committee T1 – Telecommunications. Many of T1S1's participants are also active participants in similar activities of the CCITT.

This standard contains two informative annexes, which are not part of this standard. This standard also includes a supplement, designated ANSI T1.620a-1992, which contains new and updated information.

Suggestions for improvement of this standard will be welcome. They should be sent to the Exchange Carriers Standards Association, T1 Secretariat; 1200 G Street, NW, Washington, DC 20005.

This standard was processed and approved for submittal to ANSI by Accredited Standards Committee on Telecommunications, T1. Committee approval of the standard does not imply that all committee members voted for its approval. At the time it approved this standard, Committee T1 had the following members:

Ivor N. Knight, Chairman
Arthur K. Reilly, Vice-Chairman
O.J. Gusella, Jr., Secretary

Technical Subcommittee T1S1 developed this standard. Over the course of its development, the following individuals made significant contributions to this standard:

Ghassem Koleyni, Text Editor	Jim Bendel	Virginia Lacker
	Joe Christie	Hascall Sharp
	Norman Epstein	Michael Pierce
	Joe Fobert	Janice Rathmann
	Ray Hapeman	Rudi Rudisill
	Colman Ho	George Tadros
	Vito Jokubaitis	Shaji Thomas
	Claude Kawa	Barbara Waldman

Technical Subcommittee T1S1 also developed ANSI T1.620a-1992, which is included in this standard. The following individuals made significant contributions to the supplement:

Wayne Zeuch, T1S1.1, Chairman

Robin Rossow
Barbara Waldman

American National Standard for Telecommunications –

Integrated Services Digital Network (ISDN) – Circuit-Mode Bearer Service Category Description

1 Scope, purpose, and application

1.1 Scope

This standard explains the ISDN Circuit-Mode bearer services from the user's perspective. The scope of this standard is limited to on-demand Circuit-Mode 64-kbit/s services and on-demand H_0 , H_{10} , and H_{11} channels.

This standard is based on the CCITT Recommendations I.220, I.230, and I.231.¹⁾

The first three Circuit-Mode services are those specified in *American National Standard for Telecommunications – Integrated services digital network – Minimal set of bearer services for the ISDN basic rate interface*, ANSI T1.604-1990 and *American National Standard for Telecommunications – Integral services digital network (ISDN) – Minimal set of bearer services for the ISDN primary rate interface*, ANSI T1.603-1990.

This standard does not specify the actual human interface to the end equipment being used to support the provision of the service. It does not show how the required functionality should be split between customer and network equipment. It also does not cover the protocol that will be necessary for implementing this service.

1.2 Purpose

This standard provides the service user with a description of what these services provide as well as possible options. This also provides the basis for the division of functionality and subsequent development of standardized protocols to support this service.

1.3 Application

This standard applies to an ISDN as described in the CCITT Recommendations of the I-series.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.

ANSI T1.603-1990, *Telecommunications – Integrated services digital network (ISDN) – Minimal set of bearer services for the primary rate interface*

ANSI T1.604-1990, *Telecommunications – Integrated services digital network (ISDN) – Minimal set of bearer services for the basic rate interface*

CCITT Recommendation G.711, *Pulse code modulation (PCM) of voice frequencies*²⁾

CCITT Recommendation G.722, *7 kHz audio-coding within 64 kbit/s*²⁾

CCITT Recommendation G.725, *System aspects for the use of 7 kHz audio codec within 64 kbit/s*²⁾

CCITT Recommendation I.210, *Dynamic description of the service using graphic means – Step 1.3 of description method*²⁾

¹⁾ Differences between this standard and CCITT Recommendation I.231 are listed in Annex A.
