Summary of pages

This document comprises a front cover, and inside front cover, pages i to iv, pages 1 to 38, an inside back cover and a back cover.

Foreword

Publishing information

This part of BS 1881 is published by BSI Standards Limited, under licence from The British Standards Institution, and came into effect on 31 August 2015. It was prepared by Subcommittee B/517/1, *Concrete production and testing*, under the authority of Technical Committee B/517, *Concrete and related products*. A list of organizations represented on these committees can be obtained on request to the committee manager.

Supersession

BS 1881-124:2015+A1:2021 supersedes BS 1881-124:2015, which is withdrawn.

Relationship with other publications

The BS 1881 series contains test methods for concrete currently used in the United Kingdom which are not covered by [BS EN 12350](#), [BS EN 12390](#) and [BS EN 12504](#).

Reference is made to the relevant part of [BS EN 12350](#), [BS EN 12390](#) and [BS EN 12504](#) where appropriate. These test methods may be used in conjunction with BS EN 206.

BS 1881, Testing concrete, is published in the following parts:

- [BS 1881-113](#), *Method for making and curing no-fines test cubes*
- [BS 1881-119](#), *Method for determination of compressive strength using portions of beams broken in flexure (equivalent cube method)*
- [BS 1881-122](#), *Method for determination of water absorption*
- BS 1881-124, *Methods for analysis of hardened concrete*
- [BS 1881-125](#), *Methods for mixing and sampling fresh concrete in the laboratory*
- [BS 1881-129](#), *Method for the determination of density of partially compacted semi-dry fresh concrete*
- [BS 1881-130](#), *Method for temperature-matched curing of concrete specimens*
- [BS 1881-131](#), *Methods for testing cement in a reference concrete*
- [BS 1881-201](#), *Recommendations on the use of electromagnetic covermeters*
- [BS 1881-205](#), *Recommendations for determination of strain in concrete*
- [BS 1881-207](#), *Recommendations for the assessment of concrete strength by near-to-surface tests*
- [BS 1881-208](#), *Recommendations for the determination of the initial surface absorption of concrete*
- [BS 1881-209](#), *Recommendations for the measurement of dynamic modulus of elasticity*
- [BS 1881-210](#), *Determination of the potential carbonation resistance of concrete – Accelerated carbonation method*

Information about this document

A1 Text deleted A1

Text introduced or altered by Amendment No. 1 is indicated in the text by tags A1 A1. Minor editorial changes are not tagged.

Amendment 1 introduces the following principle changes:

- [Annex A](#) has been replaced and additional tables included.

A1 Copyright is claimed on [Table A.1](#), [Table A.2](#), [Table A.3](#), [Table A.4](#) and [Table A.5](#). The copyright holder is The Concrete Society, Riverside House, 4 Meadows Business Park, Station Approach, Blackwater, Camberley, Surrey, GU17 9AB. **A1**

Hazard warnings

WARNING. Where skin is in contact with fresh concrete, skin irritations are likely to occur owing to the alkaline nature of cement. The abrasive effects of sand and aggregate in the concrete can aggravate the condition. Potential effects range from dry skin and irritant contact dermatitis, to severe burns in cases of prolonged exposure. Take precautions to avoid dry cement entering the eyes, mouth and nose when mixing mortar or concrete by wearing suitable protective clothing. Take care to prevent fresh concrete from entering boots and use working methods that do not require personnel to kneel in fresh concrete.

Unlike heat burns, cement burns might not be felt until sometime after contact with fresh concrete, so there might be no warning of damage occurring. If cement or concrete enters the eye, immediately wash it out thoroughly with clean water and seek medical treatment without delay. Wash wet concrete off the skin immediately. Barrier creams may be used to supplement protective clothing but are not an alternative means of protection.

Use of this document

It has been assumed in the preparation of this British Standard that the execution of its provisions will be entrusted to appropriately qualified and experienced people, for whose use it has been produced.

Presentational conventions

The provisions of this standard are presented in roman (i.e. upright) type. Its requirements are expressed in sentences in which the principal auxiliary verb is “shall”.

Commentary, explanation and general informationative material is presented in smaller italic type, and does not constitute a normative element.

Where words have alternative spellings, the preferred spelling of the Shorter Oxford English Dictionary is used (e.g. “organisation” rather than “organization”).

Contractual and legal considerations

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

1 Scope

This part of BS 1881 describes sampling procedures, treatment of samples and analytical methods to determine the cement content, aggregate content, aggregate grading, original water content, type of cement, type of aggregate, chloride content, sulfate content and alkali content of a sample of concrete.

The procedures are applicable to concretes made with CEM I cements and, in favourable circumstances, concretes containing ground granulated blastfurnace slag (GGBS).

This part of BS 1881 does not cover the analysis of concretes made with other cements and the determination of fly ash content.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

BS 410-1:2000, *ISO 3310-1:2000 – Test sieves – Technical requirements and testing – Part 1: Test sieves of metal wire cloth*

BS 8500 (all parts), *Concrete – Complementary British Standard to BS EN 12620*

BS EN 196-2:2013, *Methods of testing cement – Part 2: Chemical analysis of cement*

BS EN 196-7, *Methods of testing cement – Part 7: Methods of making and preparing samples of cement*

BS EN 206, *Concrete – Specification, performance, production and conformity*

BS EN 450-1, *Fly ash for concrete – Part 1: Definitions, specifications and conformity criteria*

BS EN 932-1, *Tests for general properties of aggregates – Part 1: Methods for sampling*

BS EN 934-2, *Admixtures for concrete, mortar and grout – Part 2: Concrete admixtures – Definitions, requirements, conformity, marking and labelling*
