Foreword *iv*

1	Scope	1
2	Normative references	1
3	Terms and definitions	3
4	Design	6
4.1	General	6
4.2	Weatherproofing properties of profiled sheeting	8
5	Components	8
5.1	Profiled sheeting	8
5.2	Built-up metal	11
5.3	Sandwich panels	16
5.4	Rooflights	17
5.5	Fibre cement	22
5.6	Bitumen fibre	23
5.7	Thermal insulation and moisture vapour control	23
5.8	Spacers	25
5.9	Fixings and fasteners	27
5.10	Sealants and profile fillers	33
5.11	Flashings	34
5.12	Gutters and rainwater goods	35
5.13	Roof and wall penetrations	37
5.14	Safety systems	38
6	Installation and weathertightness – laps and seals	41
6.1	Design detailing	41
6.2	Profiled metal and sandwich panels	43
6.3	Fibre cement sheeting	44
6.4	Rooflight laps	44
7	Building physics	47
7.1	Temperature and thermal movement	46
7.2	Structural loads, spans and strength	51
7.3	Safety and non-fragility	54
7.4	Control of condensation	56
7.5	Limitation of energy use by control of air leakage and effective thermal insulation	60
7.6	Acoustics	61
7.7	Fire precautions	62
7.8	Artificial lighting systems	62
7.9	Durability and coatings	62
7.10	Compatibility of materials	67
7.11	Lightning and electrical charges	74
8	Inspection and maintenance	74
8.1	General	74
8.2	Maintenance of profiled sheeting	75
8.3	Indications of the need for maintenance	76
8.4	Paint and conversion coatings	76
8.5	Plain aluminium	76
8.6	Anodized aluminium	76
8.7	Metallic coated steel	76
8.8	Fibre cement	76
8.9	Stainless steel	77
8.10	Translucent sheets	77
8.11	GRP	77
8.12	PVC and polycarbonate	77

Annexes

- Annex A (normative) Corrosion protection 78
 Annex B (normative) Impact test for wall cladding 78
 Annex C (normative) Determination of strength and stiffness of profiled sheeting 81
 Annex D (informative) Types of spacer kits and halters 86
 Annex E (normative) Determination of the strength of attachment of a cladding system 89
 Annex F (normative) Water permeability of a complete profiled roof system 98
 Bibliography 100

List of figures

- Figure 1 – Geometrical definitions of profiles 3
 Figure 2 – Schematic showing cross section of popular roofing and cladding systems 14
 Figure 3 – Bar and bracket and halter spacer kits 25
 Figure 4 – Examples of fasteners 28
 Figure 5 – Minimum heights for arrest systems 39
 Figure 6 – Supported roof side lap 43
 Figure 7 – Examples of fixed point and floating point fastener positions for rigid aluminium flashings 50
 Figure D.1 – Bar and bracket spacer kit variants 87
 Figure E.1 – Typical pull-through and pull-out test arrangements 91
 Figure E.2 – Spacer kit in-plane sway stability test set-up 92
 Figure E.3 – Space kit bracket detachment test set-up 94
 Figure E.4 – Spacer kit bracket compression test set-up 95
 Figure E.5 – Spacer kit-bar bending test set-up 97

List of tables

- Table 1 – Harmonized European self-supporting profiled sheet standards 9
 Table 2 – Common insulating materials for use with profiled sheeting 24
 Table 3 – Typical chemical composition of austenitic stainless steel fasteners (based on BS EN 10088-2, BS EN ISO 3506-1 and BS EN ISO 3506-4) 32
 Table 4 – Standards for rain water goods 36
 Table 5 – Size, shape and position of sealant(s) for typical 150 mm roof end lap details (built up systems) 42
 Table 6 – Size, shape and position of sealant(s) for typical 150 mm roof end lap details (sandwich systems) 42
 Table 7 – Accommodation of thermal movement along sheets 47
 Table 8 – Temperature limitations 48
 Table 9 – Methods of determining strength and rigidity 52
 Table 10 – Normal maximum permissible deflection for profiled sheeting and sandwich panels under distributed loads 53
 Table 11 – Examples of sound pressure levels in relation to hearing thresholds and pain thresholds 61
 Table 12 – Test methods for the durability of coatings 63
 Table 13 – Internal humidity classes: building types and limiting relative humidities 64
 Table 14 – The effect of various exposure conditions on the durability of profiled metal sheeting materials 68
 Table 15 – The effect of various exposure conditions on the durability of profiled non-metallic sheeting materials 71
 Table 16 – Checklist inspection of profiled sheet roofs 75
 Table A.1 – Corrosion categories for assessing the expected durability of profiles 78

Table B.1 – Categories associated with impacts on surfaces of the vertical enclosure to buildings 79

Table B.2 – Test impacts for retention of performance of exterior wall surfaces 80

Table B.3 – Impactors for test purposes 80

Summary of pages

This document comprises a front cover, an inside front cover, pages i to iv, pages 1 to 102, an inside back cover and a back cover.

Foreword

Publishing information

This British Standard is published by BSI Standards Limited, under licence from The British Standards Institution, and came into effect on 30th April 2016. It was prepared by Subcommittee B/542/6, *Corrugated sheeting materials*, under the authority of Technical Committee B/542, *Roofing and cladding products for discontinuous laying*. A list of organizations represented on this Subcommittee can be obtained on request to its secretary.

Supersession

This British Standard supersedes BS 5427-1:1996, which is withdrawn.

Information about this document

This is a full revision of the standard. It takes into account recent changes and developments in materials, components, cladding systems and design practice, such as sheeting profiles, surface coatings, fixing systems, thermal insulation, the use of liners, and alleviation of condensation.

Use of this document

As a code of practice, this British Standard takes the form of guidance and recommendations. It should not be quoted as if it were a specification and particular care should be taken to ensure that claims of compliance are not misleading.

Any user claiming compliance with this British Standard is expected to be able to justify any course of action that deviates from its recommendations.

It has been assumed in the preparation of this British Standard that the execution of its provisions will be entrusted to appropriately qualified and experienced people, for whose use it has been produced.

Presentational conventions

The provisions of this standard are presented in roman (i.e. upright) type. Its recommendations are expressed in sentences in which the principal auxiliary verb is "should".

Comments, explanation and general informative material is presented in smaller italic type, and does not constitute a normative element.

Contractual and legal considerations

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

1 Scope

This British Standard gives recommendations for the design and construction of external cladding assemblies for roofs and walls of buildings in the UK, using longitudinally profiled sheeting as the external surface, including standing seam. It is not applicable to profiled sheeting used as a supporting substrate, decking, structural liner trays, fully supported profiled sheets, structural composite formations of profiled metal sheeting and concrete, small element cladding or exceptional applications, such as buildings for cold storage.

The principal profiled sheeting materials covered by this British Standard are steel, aluminium, fibre cement, bitumen fibre and plastics, including insulated sandwich panel assemblies of profiled sheeting, thermal insulation and linings.

In addition to referencing performance recommendations, materials and components identified by other British Standards, advice on other materials and components which are in common use but not covered by other British Standards is also given.

This British Standard is intended for use by designers, manufacturers and installers of the roofing products.

This British Standard excludes profiled sheets used for structural purposes.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
