Public transport — Communication between contactless readers and fare media

Part 2: Test plan for ISO/IEC 14443

National foreword

This Published Document is the UK implementation of CEN/TS 16794-2:2015.

The UK participation in its preparation was entrusted to Technical Committee EPL/278, Intelligent transport systems.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

English Version

**Public transport - Communication between contactless readers
 and fare media - Part 2: Test plan for ISO/IEC 14443**

Transport Public - Système billettique interopérable -
 Communication entre terminaux et objets sans contact -
 Partie 2: Plan de test pour l'ISO/IEC 14443

Öffentlicher Verkehr - Kommunikation zwischen
 berührungslosen Ladegeräten und Färscheinmedien - Teil
 2: Prüfplan zur ISO/IEC 14443

This Technical Specification (CEN/TS) was approved by CEN on 24 February 2015 for provisional application.

The period of validity of this CEN/TS is limited initially to three years. After two years the members of CEN will be requested to submit their comments, particularly on the question whether the CEN/TS can be converted into a European Standard.

CEN members are required to announce the existence of this CEN/TS in the same way as for an EN and to make the CEN/TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force (in parallel to the CEN/TS) until the final decision about the possible conversion of the CEN/TS into an EN is reached.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (CEN/TS 16794-2:2015) has been prepared by Technical Committee CEN/TC 278 "Intelligent transport systems", the secretariat of which is held by NEN.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to announce this Technical Specification: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Introduction

This test plan represents a necessary step in a process designed to ensure contactless communications interoperability between fare management system terminals and any fare media liable to be accepted by them. The end-purpose of this document is to provide the test conformance plan that needs to be performed to ensure compliancy of fare management system terminals and any fare media in accordance to CEN/TS 16794-1, *Public transport - Communication between contactless readers and fare media - Part 1: Implementation requirements for ISO/IEC 14443*.

This test plan is not designed to repeat or duplicate the referenced specifications and associated test method (essentially ISO/IEC 14443 and ISO/IEC 10373-6 standards) but to list the test conditions to be performed in addition to the ones already described in the ISO/IEC 10373-6 standard and to define their testing and use conditions.

This test plan includes the following key clauses:

- Clause 5 describes the test environment;
- Clause 6 sets out the analog test plan for fare management system terminals;
- Clause 7 sets out the analog test plan for contactless fare media;
- Clause 8 sets out the protocol and digital test plan for fare management system terminals;
- Clause 9 sets out the protocol and digital test plan for contactless fare media.

1 Scope

This Technical Specification comes as a complement to the technical requirements expressed in CEN/TS 16794-1, *Public transport - Communication between contactless readers and fare media - Part 1: Implementation requirements for ISO/IEC 14443*, for ensuring contactless communication interoperability between contactless fare management system terminals and contactless fare media hosting a transport ticketing application.

This test plan lists all the test conditions to be performed on a contactless reader or a contactless fare media in order to ensure that all the requirements specified in CEN/TS 16794-1 are met for the device under test.

This Technical Specification is then applicable to:

- any **contactless fare management system terminals** acting as a PCD **contactless reader** based on ISO/IEC 14443-series standards;
- any **contactless fare media** acting as a PICC **contactless object** based on ISO/IEC 14443-series standards.

This test plan applies solely to the contactless communication layers described in parts 1 to 4 of the ISO/IEC 14443-series of standards. Application-to-application exchanges executed once contactless communication has been established at RF level fall outside the scope of this test plan. However, a transport ticketing application will need to be used so as to make end-to-end transactions during tests on the RF communication layer.

This test plan does not duplicate the contents of ISO/IEC 14443-series or ISO/IEC 10373-6 standards. It makes reference to the ISO/IEC 10373-6 applicable test methods, specifies the test conditions to be used and describes the additional specific test conditions that may be run.

The list of test conditions applicable to the device under test will be conditioned by the Information Conformance Statement (ICS) declaration made by the device manufacturer. For each test case, the test conditions are clearly specified in order to determine the pertinence to run or not the test case in accordance with the device capabilities or in accordance with the device manufacturer's choice.

In order to facilitate the test report issuance, a test report template is included in Annex A of the present test plan.

Although the present test plan aims at becoming the primary basis for certification of contactless communication protocol between contactless reader and contactless object, it does not describe any certification or qualification processes as such processes should be defined between local or global transit industry stakeholders and not within this CEN work group.
