Rotating electrical machines

Part 31: Selection of energy-efficient motors including variable speed applications — Application guidelines

National foreword

This Published Document is the UK implementation of CLC IEC/TS 60034-31:2024. It is identical to IEC TS 60034-31:2021. It supersedes DD CLC/TS 60034-31:2011, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PEL/2, Rotating electrical machinery.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

This publication is not to be regarded as a British Standard.

Supersedes CLC/TS 60034-31:2011

English Version

**Rotating electrical machines - Part 31: Selection of energy-efficient motors including variable speed applications -
Application guidelines
(IEC/TS 60034-31:2021)**

Machines électriques tournantes - Partie 31: Choix des moteurs écoénergétiques incluant les applications à vitesse variable - Lignes directrices en matière d'application (IEC/TS 60034-31:2021)

Drehende elektrische Maschinen - Teil 31: Auswahl von Energiesparmotoren einschließlich Drehzahlstellantrieben - Anwendungsleitfaden (IEC/TS 60034-31:2021)

This Technical Specification was approved by CENELEC on 2024-01-03.

CENELEC members are required to announce the existence of this TS in the same language as for an EN and to make the TS available promptly at national level in an appropriate form. It is permissible to keep conflicting national standards in force.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

European foreword

This document (CLC IEC/TS 60034-31:2024) consists of the text of IEC/TS 60034-31:2021 prepared by IEC/TC 2 "Rotating machinery".

This document supersedes CLC/TS 60034-31:2011.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

Endorsement notice

The text of the International Technical Specification IEC/TS 60034-31:2021 was approved by CENELEC as a European Technical Specification without any modification.

In the official version, for Bibliography, the following notes have to be added for the standard indicated:

IEC 60034-26 NOTE Approved as EN 60034-26

IEC/TS 60034-25 NOTE Approved as CLC/TS 60034-25

Annex ZA (normative)

Normative references to international publications with their corresponding European publications

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 Where an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: www.cencenelec.eu.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ROTATING ELECTRICAL MACHINES –**Part 31: Selection of energy-efficient motors including variable speed applications – Application guidelines**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a Technical Specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical Specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC TS 60034-31, which is a Technical Specification, has been prepared by IEC technical committee 2: Rotating machinery.

This publication contains an attached file titled, "TS 60034-31 Generic Efficiency Interpolation", in the form of an XLS document. This file is intended to be used as a complement and does not form an integral part of this Technical Specifications.

This second edition cancels and replaces the first edition published in 2010. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) references to relevant standards have been updated;
- b) global market data for industrial motors have been updated;
- c) guidelines and theories about normal industrial applications have been described;
- d) energy efficiency comparison examples have been given.

The text of this Technical Specification is based on the following documents:

DTS	Report on voting
2/2007/DTS	2/2028A/RVDTS

Full information on the voting for the approval of this Technical Specification can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60034 series, published under the general title *Rotating electrical machines*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This document gives technical and economical guidelines for the use of energy-efficient motors in constant speed and variable speed operations in different applications.

About 50 % of the total global electric energy consumption is converted in electric motors, which are the largest consumers of electricity per component type and industrial motors alone accounting for around 30 % of all electricity in 2016. The wording 'electricity consumption' is commonly used even though most of this energy is doing useful work. Electric motors convert electric energy into mechanical energy where a minor part is converted into heat losses. Therefore, electric motors, and especially motors operated with variable speed drives that enable control of both speed and torque according to varying load requirements, are key components that can achieve significant electricity savings.

A simple measure for reducing energy consumption is of course to invest in electric motors with higher efficiency that normally result in rapid return on investments due to the dominating operational costs through electricity bills. The highest energy saving potentials though can only be identified by taking a holistic system perspective. It is estimated that only 12 % of the installed base of electric motors are controlled by variable frequency drives, even though it is estimated that more than 50 % of these motors would benefit by such control when for instance wasteful mechanical control as throttling for varying the flow of a medium is replaced. This document is intended to give guidance for proper use of constant speed motors and variable speed motors and when to use them in light of actual applications and duty profiles.

Examples of constant torque duty profiles and quadratic torque duty profiles are given and practical implications are described in order to facilitate enhanced understanding around viable customs. Some parts of the document may be applicable for other motors as well.

ROTATING ELECTRICAL MACHINES –

Part 31: Selection of energy-efficient motors including variable speed applications – Application guidelines

1 Scope

This part of IEC 60034 provides a guideline of technical and economical aspects for the application of energy-efficient electric AC motors. It applies to motor manufacturers, OEMs (original equipment manufacturers), end users, regulators, legislators and other interested parties.

This document is applicable to all electrical machines covered by IEC 60034-1, IEC 60034-30-1 and IEC TS 60034-30-2.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies.
