BSI Standards Publication

# Information technology — Database languages — SQL Technical Reports

Part 2: SQL Support for Time-Related  
Information

**bsi.**

...making excellence a habit.™

**National foreword**

This Published Document is the UK implementation of ISO/IEC TR 19075-2:2015.

The UK participation in its preparation was entrusted to Technical Committee IST/40, Data management and interchange.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

22 Content of table emp with application-time period before updating a row. . . . .	22
23 Content of table emp with application-time period after updating a row. . . . .	22
24 Content of table emp with application-time period before deleting a row. . . . .	24
25 Content of table emp with application-time period after deleting a row. . . . .	24
26 Content of table emp with application-time period before deleting a row. . . . .	24
27 Content of table emp with application-time period before deleting a row. . . . .	25
28 Content of table emp with application-time period after deleting a row. . . . .	25
29 Content of system-versioned table emp before updating a row. . . . .	29
30 Content of system-versioned table emp after updating a row. . . . .	30
31 Content of system-versioned table emp before deleting a row. . . . .	30
32 Content of system-versioned table emp after deleting a row. . . . .	30

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

In exceptional circumstances, when the joint technical committee has collected data of a different kind from that which is normally published as an International Standard (“state of the art” for example), it may decide to publish a Technical Report. A Technical Report is entirely informative in nature and shall be subject to review every five years in the same manner as an International Standard.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC TR 19075-2 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 32, *Data management and interchange*.

ISO/IEC TR 19075 consists of the following parts, under the general title *Information technology — Database languages — SQL Technical Reports*:

- Part 1: XQuery Regular Expression Support in SQL
- Part 2: SQL Support for Time-Related Information
- Part 3: SQL Embedded in Programs Using the Java™ Programming Language
- Part 4: SQL With Routines and Types Using the Java™ Programming Language
- Part 5: Row Pattern Recognition in SQL

NOTE 1 — The individual parts of multi-part technical report are not necessarily published together. New editions of one or more parts may be published without publication of new editions of other parts.

## Introduction

The organization of this part of ISO/IEC 19075 is as follows:

- 1) **Clause 1, “Scope”**, specifies the scope of this part of ISO/IEC 19075.
- 2) **Clause 2, “Normative references”**, identifies additional standards that, through reference in this part of ISO/IEC 19075, constitute provisions of this part of ISO/IEC 19075.
- 3) **Clause 3, “Time-related datatypes, constructs, operators, and predicates”**, explains time-related datatypes, operators, and predicates in SQL.
- 4) **Clause 4, “Time-related Tables”**, explains how time-related tables are used.

**Information technology — Database languages — SQL Technical Reports —**

**Part 2:  
SQL Support for Time-Related Information**

**1 Scope**

This Technical Report describes the support in SQL for time-related information.

This Technical Report discusses the following features of the SQL language:

- Time-related datatypes
- Operations on time-related data
- Time-related Predicates
- Application-time period tables
- System-versioned tables
- Bitemporal tables
