BSI Standards Publication

# Programming languages — C++ — File System Technical Specification

**bsi.**

...making excellence a habit.™

**National foreword**

This Published Document is the UK implementation of ISO/IEC TS 18822:2015.

The UK participation in its preparation was entrusted to Technical Committee IST/5, Programming languages, their environments and system software interfaces.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, the joint technical committee may decide to publish other types of document:

- an ISO/IEC Publicly Available Specification (ISO/IEC PAS) represents an agreement between technical experts in an ISO/IEC working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;
- an ISO/IEC Technical Specification (ISO/IEC TS) represents an agreement between the members of the joint technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/IEC PAS or ISO/IEC TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/IEC PAS or ISO/IEC TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC TS 18822 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 22, *Programming languages, their environments and system software interfaces*.

## Contents

Contents	
1 Scope	
2 Conformance	
2.1 POSIX conformance	
2.2 Operating system dependent behavior conformance	
2.3 File system race behavior	
3 Normative references	
4 Terms and definitions	
4.1 absolute path	
4.2 canonical path	
4.3 directory	
4.4 file	
4.5 file system	
4.6 file system race	
4.7 filename	
4.8 hard link	
4.9 link	
4.10 native encoding	
4.11 native pathname format	
4.12 NTCTS	
4.13 operating system dependent behavior	
4.14 parent directory	
4.15 path	
4.16 pathname	
4.17 pathname resolution	
4.18 relative path	
4.19 symbolic link	
5 Requirements	
5.1 Namespaces and headers	
5.2 Feature test macros	
6 Header <code>&lt;experimental/filesystem&gt;</code> synopsis	
7 Error reporting	
8 Class <code>path</code>	
8.1 <code>path</code> generic pathname format grammar	
8.2 <code>path</code> conversions	
8.2.1 <code>path</code> argument format conversions	
8.2.2 <code>path</code> type and encoding conversions	
8.3 <code>path</code> requirements	
8.4 <code>path</code> members	
8.4.1 <code>path</code> constructors	
8.4.2 <code>path</code> assignments	

- 8.4.3 path appends
- 8.4.4 path concatenation
- 8.4.5 path modifiers
- 8.4.6 path native format observers
- 8.4.7 path generic format observers
- 8.4.8 path compare
- 8.4.9 path decomposition
- 8.4.10 path query
- 8.5 path iterators
- 8.6 path non-member functions
  - 8.6.1 path inserter and extractor
  - 8.6.2 path factory functions
- 9 Class `filesystem_error`
  - 9.1 `filesystem_error` members
- 10 Enumerations
  - 10.1 Enum class `file_type`
  - 10.2 Enum class `copy_options`
  - 10.3 Enum class `perms`
  - 10.4 Enum class `directory_options`
- 11 Class `file_status`
  - 11.1 `file_status` constructors
  - 11.2 `file_status` observers
  - 11.3 `file_status` modifiers
- 12 Class `directory_entry`
  - 12.1 `directory_entry` constructors
  - 12.2 `directory_entry` modifiers
  - 12.3 `directory_entry` observers
- 13 Class `directory_iterator`
  - 13.1 `directory_iterator` members
  - 13.2 `directory_iterator` non-member functions
- 14 Class `recursive_directory_iterator`
  - 14.1 `recursive_directory_iterator` members
  - 14.2 `recursive_directory_iterator` non-member functions
- 15 Operational functions
  - 15.1 Absolute
  - 15.2 Canonical
  - 15.3 Copy
  - 15.4 Copy file
  - 15.5 Copy symlink
  - 15.6 Create directories
  - 15.7 Create directory
  - 15.8 Create directory symlink
  - 15.9 Create hard link
  - 15.10 Create symlink

- 15.11 Current path
  - 15.12 Exists
  - 15.13 Equivalent
  - 15.14 File size
  - 15.15 Hard link count
  - 15.16 Is block file
  - 15.17 Is character file
  - 15.18 Is directory
  - 15.19 Is empty
  - 15.20 Is fifo
  - 15.21 Is other
  - 15.22 Is regular file
  - 15.23 Is socket
  - 15.24 Is symlink
  - 15.25 Last write time
  - 15.26 Permissions
  - 15.27 Read symlink
  - 15.28 Remove
  - 15.29 Remove all
  - 15.30 Rename
  - 15.31 Resize file
  - 15.32 Space
  - 15.33 Status
  - 15.34 Status known
  - 15.35 Symlink status
  - 15.36 System complete
  - 15.37 Temporary directory path
-

## 1 Scope [fs.scope]

- 1 This Technical Specification specifies requirements for implementations of an interface that computer programs written in the C++ programming language may use to perform operations on file systems and their components, such as paths, regular files, and directories. This Technical Specification is applicable to information technology systems that can access hierarchical file systems, such as those with operating systems that conform to the POSIX (3) interface. This Technical Specification is applicable only to vendors who wish to provide the interface it describes.

## 2 Conformance [fs.conformance]

- 1 Conformance is specified in terms of behavior. Ideal behavior is not always implementable, so the conformance sub-clauses take that into account.

### 2.1 POSIX conformance [fs.conform.9945]

- 1 Some behavior is specified by reference to POSIX (3). How such behavior is actually implemented is unspecified.
  - 2 [Note: This constitutes an "as if" rule allowing implementations to call native operating system or other API's. —end note]
- 3 Implementations are encouraged to provide such behavior as it is defined by POSIX. Implementations shall document any behavior that differs from the behavior defined by POSIX. Implementations that do not support exact POSIX behavior are encouraged to provide behavior as close to POSIX behavior as is reasonable given the limitations of actual operating systems and file systems. If an implementation cannot provide any reasonable behavior, the implementation shall report an error as specified in § 7.
  - 4 [Note: This allows users to report an exception being thrown or an error code being set when an implementation cannot provide any reasonable behavior. — end note]
- 5 Implementations are not required to provide behavior that is not supported by a particular file system.
  - 6 [Example: The FAT file system used by some memory cards, camera memory, and floppy discs does not support hard links, symlinks, and many other features of more capable file systems, so implementations are not required to support those features on the FAT file system. —end example]

### 2.2 Operating system dependent behavior conformance [fs.conform.os]

- 1 Some behavior is specified as being operating system dependent (4.13). The operating system an implementation is dependent upon is implementation defined.
