

**Evaluation of adhesives for structural wood products
(exterior exposure)**

Legal Notice for Standards

Canadian Standards Association (operating as “CSA Group”) develops standards through a consensus standards development process approved by the Standards Council of Canada. This process brings together volunteers representing varied viewpoints and interests to achieve consensus and develop a standard. Although CSA Group administers the process and establishes rules to promote fairness in achieving consensus, it does not independently test, evaluate, or verify the content of standards.

Disclaimer and exclusion of liability

This document is provided without any representations, warranties, or conditions of any kind, express or implied, including, without limitation, implied warranties or conditions concerning this document’s fitness for a particular purpose or use, its merchantability, or its non-infringement of any third party’s intellectual property rights. CSA Group does not warrant the accuracy, completeness, or currency of any of the information published in this document. CSA Group makes no representations or warranties regarding this document’s compliance with any applicable statute, rule, or regulation.

IN NO EVENT SHALL CSA GROUP, ITS VOLUNTEERS, MEMBERS, SUBSIDIARIES, OR AFFILIATED COMPANIES, OR THEIR EMPLOYEES, DIRECTORS, OR OFFICERS, BE LIABLE FOR ANY DIRECT, INDIRECT, OR INCIDENTAL DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES, HOWSOEVER CAUSED, INCLUDING BUT NOT LIMITED TO SPECIAL OR CONSEQUENTIAL DAMAGES, LOST REVENUE, BUSINESS INTERRUPTION, LOST OR DAMAGED DATA, OR ANY OTHER COMMERCIAL OR ECONOMIC LOSS, WHETHER BASED IN CONTRACT, TORT (INCLUDING NEGLIGENCE), OR ANY OTHER THEORY OF LIABILITY, ARISING OUT OF OR RESULTING FROM ACCESS TO OR POSSESSION OR USE OF THIS DOCUMENT, EVEN IF CSA GROUP HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES.

In publishing and making this document available, CSA Group is not undertaking to render professional or other services for or on behalf of any person or entity or to perform any duty owed by any person or entity to another person or entity. The information in this document is directed to those who have the appropriate degree of experience to use and apply its contents, and CSA Group accepts no responsibility whatsoever arising in any way from any and all use of or reliance on the information contained in this document.

CSA Group is a private not-for-profit company that publishes voluntary standards and related documents. CSA Group has no power, nor does it undertake, to enforce compliance with the contents of the standards or other documents it publishes.

Intellectual property rights and ownership

As between CSA Group and the users of this document (whether it be in printed or electronic form), CSA Group is the owner, or the authorized licensee, of all works contained herein that are protected by copyright, all trade-marks (except as otherwise noted to the contrary), and all inventions and trade secrets that may be contained in this document, whether or not such inventions and trade secrets are protected by patents and applications for patents. Without limitation, the unauthorized use, modification, copying, or disclosure of this document may violate laws that protect CSA Group’s and/or others’ intellectual property and may give rise to a right in CSA Group and/or others to seek legal redress for such use, modification, copying, or disclosure. To the extent permitted by treaty or by law, CSA Group reserves all intellectual property rights in this document.

Patent rights

Attention is drawn to the possibility that some of the elements of this standard may be the subject of patent rights. CSA Group shall not be held responsible for identifying any or all such patent rights. Users of this standard are expressly advised that determination of the validity of any such patent rights is entirely their own responsibility.

Authorized use of this document

This document is being provided by CSA Group for informational and non-commercial use only. The user of this document is authorized to do only the following:

If this document is in electronic form:

- load this document onto a computer for the sole purpose of reviewing it;
- search and browse this document; and
- print this document if it is in PDF form.

Limited copies of this document in print or paper form may be distributed only to persons who are authorized by CSA Group to have such copies, and only if this Legal Notice appears on each such copy.

In addition, users may not and may not permit others to

- alter this document in any way, or remove this Legal Notice from the attached standard;
- sell this document without authorization from CSA Group; or
- make an electronic copy of this document.

If you do not agree with any of the terms and conditions contained in this Legal Notice, you may not load or use this document or make any copies of the contents hereof, and if you do make such copies, you are required to destroy them immediately. Use of this document constitutes your acceptance of the terms and conditions of this Legal Notice.

Update No. 1

O112.9-10

December 2011

Note: General Instructions for CSA Standards are now called Updates. Please contact CSA Information Products Sales or visit shop.csa.ca for information about the **CSA Standards Update Service**.

Title: *Evaluation of adhesives for structural wood products (exterior exposure)* — originally published January 2010

The following revisions have been formally approved and are marked by the symbol delta (Δ) in the margin on the attached replacement pages:

Revised	Clause B.1
New	None
Deleted	None

- Update your copy by inserting these revised pages.
- Keep the pages you remove for reference.

Annex A (informative)

Actions to be taken if boil-dry-freeze conditioning is interrupted

Note: This Annex is an informative (non-mandatory) part of this Standard.

A.1

Table A.1 indicates the actions to be taken if shear block test boil-dry-freeze conditioning needs to be interrupted (e.g., because of laboratory closure or unavailability of equipment).

Table A.1
Action to be taken if boil-dry-freeze conditioning is interrupted
(See Clause A.1.)

Last completed cycle*	Action to be taken	Next cycle
Final 4 h boil	Cool in water, drain, and store in a sealed plastic bag at 10 °C to 15 °C Note: Remove the specimens from the chamber still sealed in the plastic bag and store them next to a testing machine for at least 1 h to bring them close to or at room temperature prior to testing.	Testing
4 h boil (except the final 4 h boil)	Cool in water, drain, and store in a sealed plastic bag at 10 °C to 15 °C	19 h drying
19 h drying	Store in an environmental chamber at 20 °C and 65% relative humidity	4 h freezing
4 h freezing	Leave in the freezer until the next cycle begins	4 h boil
In water	Drain and wipe the surface water off the specimens. Store in a sealed plastic bag at 10° to 15 °C Note: Remove the specimens from the chamber still sealed in the plastic bag and store them next to the testing machine for at least 1 h to bring them close to or at room temperature prior to testing.	Testing

*Conditioning should not be interrupted during a cycle.

Annex B (normative)

Measurement and computation of bond line creep

Note: This Annex is a normative (mandatory) part of this Standard.

B.1 Environments A, B₁, and B₂

Each full-length creep specimen shall have 14 bonded cross-sections (Joint 1 to Joint 14 in Figure 7). When partial-length creep specimens are used, only eight joints shall be considered (Joints 1, 2, 5, 6, 9, 10, 13, and 14 in Figure 6). Creep (D_{Jnt-n}) of a bonded cross-section shall be the average of the four creep measurements D_1 , D_2 , D_3 , and D_4 (see Figure 5).

The calculations for each creep specimen shall be as follows:

(a) Overall creep:

$$\Delta \quad \frac{1}{N} \sum_{n=1}^N D_{Jnt-n} \leq 0.05 \text{ mm (for Environments A and B}_1\text{)}$$

$$\leq 0.6 \text{ mm (for Environment B}_2\text{)}$$

where

$N = 14$ when considering a full-length specimen

$= 8$ when considering a partial-length specimen

$= 6$ when one of the partial-length specimens is discarded

(b) Creep at any cross-section:

$$D_{Jnt-n} - \frac{D_1 + D_2 + D_3 + D_4}{4} \leq 0.25 \text{ mm (for Environments A and B}_1\text{)}$$

$$\leq 2.9 \text{ mm (for Environment B}_2\text{)}$$

B.2 Environment C

Creep (D_{Jnt-n}) of the bond line of a specimen shall be the average of the two creep measurements D_1 and D_2 (see Figure 9) as shown below:

$$D_{Jnt-n} = \frac{D_1 + D_2}{2} \leq 0.25 \text{ mm}$$

The overall creep of all specimens from one assembly shall be

$$\text{Overall creep} = \frac{1}{N} \sum_{n=1}^N D_{Jnt-n} \leq 0.05 \text{ mm}$$

where

$N = 2$ when considering all specimens from an assembly

$= 0$ when two of the specimens from an assembly are discarded

Preface

This is the second edition of CSA O112.9, *Evaluation of adhesives for structural wood products (exterior exposure)*. It supersedes the previous edition, published in 2004.

Unlike the other Standards in the CSA O112 Series, which rely on CSA O112.0 for their test procedures, this Standard is not restricted to a specific class of adhesives, and its test procedures are self-contained. It is also one of the few Standards that evaluate the performance of adhesives under thermal conditions corresponding to those that would be encountered during a fire by a structural wood product used in a fire-protected wood assembly.

Users of this Standard should note that it has been developed for untreated wood only. It is solely the responsibility of the users of this Standard to decide whether they wish to apply its requirements to treated wood.

The procedures in this Standard are under continuing development by the members of the Technical Committee and the Subcommittee responsible for producing this Standard. The areas under development are described in [Annex C](#). They include the development of a fire test for bonded wood members.

This Standard was prepared by the Subcommittee on Wood Adhesives, under the jurisdiction of the Technical Committee on Solid and Engineered Wood Products and the Strategic Steering Committee on Forest Products, and has been formally approved by the Technical Committee.

January 2010

Notes:

- (1) Use of the singular does not exclude the plural (and vice versa) when the sense allows.
- (2) Although the intended primary application of this Standard is stated in its Scope, it is important to note that it remains the responsibility of the users of the Standard to judge its suitability for their particular purpose.
- (3) This publication was developed by consensus, which is defined by CSA Policy governing standardization — Code of good practice for standardization as “substantial agreement. Consensus implies much more than a simple majority, but not necessarily unanimity”. It is consistent with this definition that a member may be included in the Technical Committee list and yet not be in full agreement with all clauses of this publication.
- (4) CSA Standards are subject to periodic review, and suggestions for their improvement will be referred to the appropriate committee.
- (5) All enquiries regarding this Standard, including requests for interpretation, should be addressed to Canadian Standards Association, 5060 Spectrum Way, Suite 100, Mississauga, Ontario, Canada L4W 5N6.
Requests for interpretation should
 - (a) define the problem, making reference to the specific clause, and, where appropriate, include an illustrative sketch;
 - (b) provide an explanation of circumstances surrounding the actual field condition; and
 - (c) be phrased where possible to permit a specific “yes” or “no” answer.

Committee interpretations are processed in accordance with the CSA Directives and guidelines governing standardization and are published in CSA's periodical Info Update, which is available on the CSA Web site at www.csa.ca.

O112.9-10

Evaluation of adhesives for structural wood products (exterior exposure)

1 Scope

1.1

This Standard specifies requirements for evaluating adhesives used to bond solid wood materials in structural wood products designed for exterior applications.

Note: See [Annex C](#) for additional information on exterior exposure and other moisture exposure categories for structural wood adhesives.

1.2

This Standard specifies requirements for evaluating the resistance of adhesives to

- (a) shear caused by compression loading, under both wet and dry conditions;
- (b) delamination during accelerated exposure to wetting and drying; and
- (c) deformation under static shear loading during exposure to heat, high humidity, or combined heat and high humidity.

1.3

This Standard does not apply to adhesives intended for below-ground, ground-contact, or marine service applications.

1.4

This Standard is not intended for the assessment of the effects of chemical treatments of wood on adhesive performance.

1.5

In CSA Standards, “shall” is used to express a requirement, i.e., a provision that the user is obliged to satisfy in order to comply with the standard; “should” is used to express a recommendation or that which is advised but not required; “may” is used to express an option or that which is permissible within the limits of the standard; and “can” is used to express possibility or capability. Notes accompanying clauses do not include requirements or alternative requirements; the purpose of a note accompanying a clause is to separate from the text explanatory or informative material. Notes to tables and figures are considered part of the table or figure and may be written as requirements. Annexes are designated normative (mandatory) or informative (non-mandatory) to define their application.

2 Reference publications

This Standard refers to the following publications, and where such reference is made, it shall be to the edition listed below.
