Legal Notice for Standards

Canadian Standards Association (operating as “CSA Group”) develops standards through a consensus standards development process approved by the Standards Council of Canada. This process brings together volunteers representing varied viewpoints and interests to achieve consensus and develop a standard. Although CSA Group administers the process and establishes rules to promote fairness in achieving consensus, it does not independently test, evaluate, or verify the content of standards.

Disclaimer and exclusion of liability

This document is provided without any representations, warranties, or conditions of any kind, express or implied, including, without limitation, implied warranties or conditions concerning this document’s fitness for a particular purpose or use, its merchantability, or its non-infringement of any third party’s intellectual property rights. CSA Group does not warrant the accuracy, completeness, or currency of any of the information published in this document. CSA Group makes no representations or warranties regarding this document’s compliance with any applicable statute, rule, or regulation.

IN NO EVENT SHALL CSA GROUP, ITS VOLUNTEERS, MEMBERS, SUBSIDIARIES, OR AFFILIATED COMPANIES, OR THEIR EMPLOYEES, DIRECTORS, OR OFFICERS, BE LIABLE FOR ANY DIRECT, INDIRECT, OR INCIDENTAL DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES, HOWSOEVER CAUSED, INCLUDING BUT NOT LIMITED TO SPECIAL OR CONSEQUENTIAL DAMAGES, LOST REVENUE, BUSINESS INTERRUPTION, LOST OR DAMAGED DATA, OR ANY OTHER COMMERCIAL OR ECONOMIC LOSS, WHETHER BASED IN CONTRACT, TORT (INCLUDING NEGLIGENCE), OR ANY OTHER THEORY OF LIABILITY, ARISING OUT OF OR RESULTING FROM ACCESS TO OR POSSESSION OR USE OF THIS DOCUMENT, EVEN IF CSA GROUP HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES.

In publishing and making this document available, CSA Group is not undertaking to render professional or other services for or on behalf of any person or entity or to perform any duty owed by any person or entity to another person or entity. The information in this document is directed to those who have the appropriate degree of experience to use and apply its contents, and CSA Group accepts no responsibility whatsoever arising in any way from any and all use of or reliance on the information contained in this document.

CSA Group is a private not-for-profit company that publishes voluntary standards and related documents. CSA Group has no power, nor does it undertake, to enforce compliance with the contents of the standards or other documents it publishes.

Intellectual property rights and ownership

As between CSA Group and the users of this document (whether it be in printed or electronic form), CSA Group is the owner, or the authorized licensee, of all works contained herein that are protected by copyright, all trade-marks (except as otherwise noted to the contrary), and all inventions and trade secrets that may be contained in this document, whether or not such inventions and trade secrets are protected by patents and applications for patents. Without limitation, the unauthorized use, modification, copying, or disclosure of this document may violate laws that protect CSA Group’s and/or others’ intellectual property and may give rise to a right in CSA Group and/or others to seek legal redress for such use, modification, copying, or disclosure. To the extent permitted by treaty or by law, CSA Group reserves all intellectual property rights in this document.

Patent rights

Attention is drawn to the possibility that some of the elements of this standard may be the subject of patent rights. CSA Group shall not be held responsible for identifying any or all such patent rights. Users of this standard are expressly advised that determination of the validity of any such patent rights is entirely their own responsibility.

Authorized use of this document

This document is being provided by CSA Group for informational and non-commercial use only. The user of this document is authorized to do only the following:

If this document is in electronic form:

- load this document onto a computer for the sole purpose of reviewing it;
- search and browse this document; and
- print this document if it is in PDF form.

Limited copies of this document in print or paper form may be distributed only to persons who are authorized by CSA Group to have such copies, and only if this Legal Notice appears on each such copy.

In addition, users may not and may not permit others to

- alter this document in any way, or remove this Legal Notice from the attached standard;
- sell this document without authorization from CSA Group; or
- make an electronic copy of this document.

If you do not agree with any of the terms and conditions contained in this Legal Notice, you may not load or use this document or make any copies of the contents hereof, and if you do make such copies, you are required to destroy them immediately. Use of this document constitutes your acceptance of the terms and conditions of this Legal Notice.

Standards Update Service

If you require assistance, please e-mail techsupport@csagroup.org or call 416-747-2233.

Visit CSA Group's policy on privacy at www.csagroup.org/legal to find out how we protect your personal information.

Canadian Standards Association (operating as “CSA Group”), under whose auspices this National Standard has been produced, was chartered in 1919 and accredited by the Standards Council of Canada to the National Standards system in 1973. It is a not-for-profit, nonstatutory, voluntary membership association engaged in standards development and certification activities.

CSA Group standards reflect a national consensus of producers and users — including manufacturers, consumers, retailers, unions and professional organizations, and governmental agencies. The standards are used widely by industry and commerce and often adopted by municipal, provincial, and federal governments in their regulations, particularly in the fields of health, safety, building and construction, and the environment.

More than 10 000 members indicate their support for CSA Group’s standards development by volunteering their time and skills to Committee work.

CSA Group offers certification and testing services in support of and as an extension to its standards development activities. To ensure the integrity of its certification process, CSA Group regularly and continually audits and inspects products that bear the CSA Group Mark.

In addition to its head office and laboratory complex in Toronto, CSA Group has regional branch offices in major centres across Canada and inspection and testing agencies in fourteen countries. Since 1919, CSA Group has developed the necessary expertise to meet its corporate mission: CSA Group is an independent service organization whose mission is to provide an open and effective forum for activities facilitating the exchange of goods and services through the use of standards, certification and related services to meet national and international needs.

For further information on CSA Group services, write to

Canada

A National Standard of Canada is a standard developed by a Standards Council of Canada (SCC) accredited Standards Development Organization, in compliance with requirements and guidance set out by SCC. More information on National Standards of Canada can be found at www.scc.ca.

SCC is a Crown corporation within the portfolio of Innovation, Science and Economic Development (ISED) Canada. With the goal of enhancing Canada’s economic competitiveness and social wellbeing, SCC leads and facilitates the development and use of national and international standards. SCC also coordinates Canadian participation in standards development, and identifies strategies to advance Canadian standardization efforts.

Accreditation services are provided by SCC to various customers, including product certifiers, testing laboratories, and standards development organizations. A list of SCC programs and accredited bodies is publicly available at www.scc.ca.

4.1 Objective 51

4.2 Limit states 51

4.3 Design requirements 51

4.3.1 Structural adequacy 51

4.3.2 New or special systems of design and construction 51

4.3.3 Structural integrity 51

4.3.4 Basis of design 51

4.3.5 Quality of work 52

4.3.6 Design drawings 52

5 General design 52

5.1 Limit states design 52

5.1.1 Methods of analysis 52

5.1.2 Ultimate limit states 52

5.1.3 Serviceability limit states 53

5.1.4 Resistance factors 53

5.2 Loading 53

5.2.1 Loads applied to buildings 53

5.2.2	Loads applied to other structures	53
5.2.3	Specified loads	53
5.2.4	Load combinations	53
5.3	Conditions and factors affecting resistance	54
5.3.1	General	54
5.3.2	Load-duration factor, K_D	54
5.3.3	Service-condition factor, K_S	55
5.3.4	Preservative and fire-retardant treatment factor, K_T	55
5.3.5	System factor, K_H	56
5.3.6	Size factor, K_Z	56
5.3.7	Lateral-stability factor, K_L	56
5.3.8	Reduction in cross-section	56
5.4	Serviceability requirements	56
5.4.1	Modulus of elasticity	56
5.4.2	Deflection	57
5.4.3	Ponding	58
5.4.4	Vibration	58
5.4.5	Building movements due to change in moisture content	59
5.5	Lateral brace force for wood truss compression webs	59
5.6	Fire resistance	59

6 Sawn lumber 59

6.1	Scope	59
6.2	Materials	59
6.2.1	Identification of lumber	59
6.2.2	Lumber grades and categories	61
6.2.3	Finger-joined and face-glued lumber	62
6.2.4	Remanufactured lumber	63
6.2.5	Mixed grades	63
6.3	Specified strengths and moduli of elasticity	63
6.3.1	Visually stress-graded lumber	64
6.3.2	Machine stress-rated and machine evaluated lumber	64
6.4	Modification factors	72
6.4.1	Load-duration factor, K_D	72
6.4.2	Service-condition factor, K_S	72
6.4.3	Treatment factor, K_T	73
6.4.4	System factor, K_H	73
6.4.5	Size factor, K_Z	74
6.5	Strengths and resistances	77
6.5.1	General	77
6.5.2	Sizes	77
6.5.3	Bending moment resistance	77
6.5.4	Shear resistance	78
6.5.5	Compressive resistance parallel to grain	81
6.5.6	Compressive resistance perpendicular to grain	85
6.5.7	Compressive resistance at an angle to grain	87
6.5.8	Tensile resistance parallel to grain	88
6.5.9	Resistance to combined bending and axial load	88
6.5.10	Decking	89

6.5.11	Permanent wood foundations	90
6.5.12	Specific truss applications	91
6.6	Serviceability limit states	93
7	Glued-laminated timber (glulam)	93
7.1	Scope	93
7.2	Materials	93
7.2.1	Stress grades	93
7.2.2	Appearance grades	94
7.3	Specified strengths and moduli of elasticity	94
7.4	Modification factors	96
7.4.1	Load-duration factor, K_D	96
7.4.2	Service-condition factor, K_S	96
7.4.3	Treatment factor, K_T	96
7.4.4	System factor, K_H	96
7.5	Strengths and resistances	97
7.5.1	Scope	97
7.5.2	Orientation	97
7.5.3	Vertically glued-laminated beams	97
7.5.4	Net section	97
7.5.5	Size	97
7.5.6	Bending moment resistance	98
7.5.7	Shear resistance	108
7.5.8	Compressive resistance parallel to grain	114
7.5.9	Compressive resistance perpendicular to grain (bearing)	116
7.5.10	Compressive resistance at an angle to grain	117
7.5.11	Tensile resistance parallel to grain	117
7.5.12	Resistance to combined bending and axial load	117
7.6	Serviceability limit states	118
8	Cross-laminated timber (CLT) and mechanically laminated timber (MLT)	118
8.1	CLT	118
8.1.1	Scope	118
8.1.2	Materials	119
8.1.3	Modification factors	121
8.1.4	Strengths and resistances	121
8.1.5	Serviceability limit states	128
8.2	Mechanically laminated timber (MLT)	128
8.2.1	Scope	128
8.2.2	Materials	129
8.2.3	Modification factors	129
8.2.4	Strengths and resistances	131
8.2.5	Serviceability limit states	134
9	Structural panels	134
9.1	Scope	134
9.2	Materials	134
9.2.1	Plywood	134
9.2.2	OSB	134

9.2.3	Adhesives for stress joints	135
9.3	Specified capacities	135
9.3.1	Plywood	135
9.3.2	OSB	135
9.4	Modification factors	146
9.4.1	Load-duration factor, K_D	146
9.4.2	Service-condition factor, K_S	147
9.4.3	Treatment factor, K_T	147
9.4.4	Stress-joint factor, X_j	147
9.4.5	End-use factor, K_F , for permanent wood foundations	150
9.5	Strengths and resistances	150
9.5.1	Stress orientation	150
9.5.2	Flatwise bending	150
9.5.3	Edgewise bending	150
9.5.4	Planar shear	150
9.5.5	Shear-through-thickness of structural panel	151
9.5.6	Compression parallel to panel edge	152
9.5.7	Tension parallel to panel edge	152
9.5.8	Compressive resistance perpendicular to face (bearing)	152
10	Composite building components	152
10.1	Scope	152
10.2	Materials	153
10.2.1	General	153
10.2.2	Adhesives for structural components	153
10.3	Construction requirements for stress joints	153
10.3.1	Types of stress joints	153
10.3.2	Adhesives for stress joints	153
10.3.3	Scarf joints	153
10.3.4	Butt joints	153
10.4	Stress-joint factor, X_j	154
10.4.1	Joint requirements	154
10.4.2	Scarf joints	154
10.4.3	Butt joints	154
10.5	Plywood- and OSB web beams	154
10.5.1	General	154
10.5.2	Effective stiffness	155
10.5.3	Bending moment resistance	156
10.5.4	Web shear-through-thickness	156
10.5.5	Flange web shear	157
10.5.6	Deflection calculation	157
10.5.7	Lateral stability of panel-web beams	161
10.5.8	Stiffeners	161
10.5.9	Web stabilizers	161
10.6	Stressed skin panels	161
10.6.1	General	161
10.6.2	Effective stiffness	161
10.6.3	Bending moment resistance	162

11	Lateral-load-resisting systems	165
11.1	Scope	165
11.2	Materials	165
11.2.1	General	165
11.2.2	Additional materials	165
11.3	Design of light-frame shearwalls and diaphragms	165
11.3.1	General	165
11.3.2	Shearwalls and diaphragms using wood structural panels	166
11.3.3	Shearwalls using gypsum wallboard	168
11.3.4	Shearwalls and diaphragms using diagonal lumber sheathing	169
11.4	Design considerations for light-frame shearwalls	169
11.4.1	Shearwalls with openings	169
11.4.2	Shearwalls with dissimilar materials	170
11.4.3	Shearwalls with multiple layers	170
11.4.4	Overturning restraint	170
11.4.5	Shearwall anchorage	171
11.4.6	Concrete or masonry wall anchorage	172
11.5	Strength-adjustment factors for light-frame shearwalls and diaphragms	172
11.5.1	Fastener spacing factor, J_s	172
11.5.2	Fastener row factor for diaphragms, J_f	172
11.5.3	Factor for unblocked diaphragms, J_{ud}	173
11.5.4	Factor for unblocked shearwalls, J_{us}	173
11.5.5	Hold-down-effect factor for shearwall segments, J_{hd}	175
11.6	Strength and resistance of light-frame shearwalls and diaphragms	178
11.6.1	General	178
11.6.2	Shear resistance of shearwalls	179
11.6.3	Shear resistance of diaphragms	181
11.6.4	Moment resistance of shearwalls and diaphragms	183
11.6.5	Boundary members in shearwalls and diaphragms with single-layer diagonal sheathing	184
11.7	Deflection of light-frame shearwalls and diaphragms	184
11.7.1	Deflection of shearwalls	184
11.7.2	Deflection of diaphragms	186
11.8	Seismic design considerations for light-frame shearwalls and diaphragms	186
11.8.1	General	186
11.8.2	Shearwall hold-downs and shear transfer connections	187
11.8.3	Over-capacity connected light-frame seismic force resisting system (SFRS)	187
11.8.4	Light-frame diaphragms supported on light-frame shearwalls	187
11.8.5	Light-frame diaphragms in buildings with SFRSs other than light-frame shearwalls	188
11.8.6	Design of force transfer elements	188
11.8.7	Structures in low seismic zones	189
11.8.8	Requirements for shearwalls using gypsum wallboard	189
11.8.9	Load-bearing walls constructed with gypsum wallboard only	189
11.9	Design of CLT shearwalls and diaphragms	190
11.9.1	Scope	190
11.9.2	Strength and resistance	190
11.9.3	Seismic design considerations for CLT structures	194
11.9.4	Members not considered part of SFRS	200
11.9.5	Deflection of CLT shearwalls	201

12	Connections	204
12.1	Scope	204
12.2	General requirements	204
12.2.1	All connections	204
12.2.2	Split-ring and shear-plate connectors, bolts, dowels, and lag screws	207
12.3	Split-ring and shear-plate connectors	214
12.3.1	General	214
12.3.2	Service-condition factors, K_{SF}	216
12.3.3	Configuration factors, J_C	216
12.3.4	Thickness factor, J_T	220
12.3.5	Connectors used with lag screws	221
12.3.6	Lateral resistance	222
12.4	Bolts and dowels	224
12.4.1	General	224
12.4.2	Materials	224
12.4.3	Placement of bolts and dowels in connections	225
12.4.4	Lateral resistance	229
12.4.5	Axial resistance	237
12.4.6	Combined lateral and axial resistance	237
12.5	Drift pins	237
12.5.1	General	237
12.5.2	Pre-drilled holes	237
12.5.3	Drift-pin points	237
12.5.4	Axial tension	237
12.5.5	Size and placement of drift pins in connections	237
12.5.6	Lateral resistance	238
12.6	Lag screws	239
12.6.1	General	239
12.6.2	Placement of lag screws in connections	239
12.6.3	Penetration length of lag screws	241
12.6.4	Side members	242
12.6.5	Lateral resistance	242
12.6.6	Withdrawal resistance	244
12.7	Timber rivets	245
12.7.1	General	245
12.7.2	Placement of timber rivets in connections	247
12.7.3	Lateral resistance	250
12.7.4	Withdrawal resistance	252
12.8	Truss plates	275
12.8.1	General	275
12.8.2	Design	276
12.8.3	Factored resistance of truss plates	278
12.8.4	Lateral slip resistance	280
12.9	Nails and spikes	281
12.9.1	General	281
12.9.2	Connection configuration	281
12.9.3	Lateral resistance	284
12.9.4	Withdrawal resistance	286
12.10	Joist hangers	287

12.10.1	General	287
12.10.2	Design	288
12.11	Wood screws	289
12.11.1	General	289
12.11.2	Connection configuration	289
12.11.3	Lateral resistance	290
12.11.4	Withdrawal resistance	292
12.12	Self-tapping screws	293
12.12.1	General	293
12.12.2	Materials	294
12.12.3	Geometry of self-tapping screws	294
12.12.4	Connection assembly	296
12.12.5	Placement of self-tapping screws in connections	298
12.12.6	Penetration length of self-tapping screws	301
12.12.7	Minimum side member thickness	301
12.12.8	Resistance in axial tension	301
12.12.9	Resistance in axial compression	303
12.12.10	Lateral resistance	303
12.12.11	Resistance of connections subjected to combined axial and lateral loading	320

13 Timber-concrete-composite (TCC) floors 321

13.1	Scope	321
13.2	Materials	321
13.2.1	Concrete	321
13.2.2	Reinforcing steel	321
13.2.3	Wood	322
13.2.4	Shear connection	322
13.3	Modification factors	323
13.3.1	Concrete	323
13.3.2	Wood	323
13.3.3	Shear connection	324
13.4	Design principles	324
13.4.1	Service life periods	324
13.4.2	Load-duration and creep adjustments	324
13.5	Stiffness, strength, and resistance	325
13.5.1	Scope	325
13.5.2	Spacing of shear connectors	325
13.5.3	Effective width of concrete slab	326
13.5.4	Effective bending stiffness	326
13.5.5	Bending moment resistance	329
13.5.6	Shear resistance	331
13.5.7	Sustained loads applied before composite action is developed	332
13.6	Serviceability limit states	332
13.6.1	General	332
13.6.2	Deflection	332
13.6.3	Vibration performance of TCC floors	333
13.7	Fabrication requirements for TCC floors with cast-in-place concrete	333
13.7.1	Wood	333
13.7.2	Water transfer	333

14	Timber piling	333
14.1	Scope	333
14.2	Materials	333
14.2.1	Preservative treatment	333
14.2.2	Untreated piling	333
14.3	Specified strengths and moduli of elasticity	333
14.4	Modification factors	333
14.5	Strengths and resistances	334
14.5.1	General	334
14.5.2	Piles as compression members	334
14.5.3	Effective length	334
14.5.4	Embedded portion	334
14.5.5	Unembedded portion	334
15	Pole-type construction	336
15.1	Scope	336
15.1.1	Round poles	336
15.1.2	Sawn timbers	336
15.2	Materials	336
15.2.1	Preservative treatment	336
15.2.2	Short poles	336
15.3	Specified strengths	336
15.4	Modification factors	336
15.5	Strengths and resistances	336
15.5.1	General	336
15.5.2	Poles as compression members	337
15.5.3	Poles as bending members	337
16	Proprietary structural wood products — Design	337
16.1	Scope	337
16.2	Prefabricated wood I-joists	338
16.2.1	General	338
16.2.2	Modification factors	338
16.2.3	Strengths and resistances	338
16.2.4	Serviceability limit states	340
16.2.5	Connections for prefabricated wood I-joists	340
16.3	Structural composite lumber	340
16.3.1	General	340
16.3.2	Modification factors	340
16.3.3	Strengths and resistances	341
16.3.4	Serviceability limit states	345
16.3.5	Connections for structural composite lumber	345
17	Proprietary structural products — Materials and evaluation	345

Preface

This is the twelfth edition of CSA O86, *Engineering design in wood*. It is presented in limit states design (LSD) format and supersedes the previous editions published in 2019, 2014, 2009, 2001, 1994, 1989, 1984, 1980, 1976, 1970, and 1959, including their Supplements.

Editions of CSA O86 published in 1959, 1970, 1976, 1980, and 1984 were all developed using working stress design (WSD) theory. The last WSD version, CSA CAN3-O86-M84, *Engineering design in wood (working stress design)*, existed concurrently with the first (1984) and second (1989) LSD versions, *Engineering design in wood (limit states design)*. The WSD version was withdrawn upon publication of the 1994 LSD edition.

Three LSD editions were published in 1984, 1989, and 1994 with the CSA designation O86.1. Supplements to each of these editions were published in 1987, 1993, and 1998, respectively. Although the 2001 edition was also based on the LSD method, the O86 designation was reinstated.

Primary changes in this edition include the following:

- revisions to Clause [5.4.2](#) to include creep in the deflection calculation, and the deletion of Clause 5.4.3;
- revisions to the lateral stability provisions for built-up beams in Clause [6.5.3.2.4](#) and for glulam in Clauses [7.5.6.3](#) to [7.5.6.6](#);
- addition of a new Clause [8.2](#) on mechanically laminated timber (MLT), including prefabricated dowel-laminated timber (DLT) and nail-laminated timber (NLT);
- revisions to Clause [11.9](#) for the design of cross-laminated timber (CLT) shearwalls and diaphragms for platform-type construction;
- addition of a new Clause [12.12](#) and the associated Clause [17.6](#) on self-tapping screws;
- addition of a new Clause [13](#) and the associated Clauses [17.7](#), [A.13](#), and [B.11](#) on timber-concrete-composite (TCC) floors; and
- as a result of the addition of TCC floors, the relocation of Clauses 13 to 16 in CSA O86:19 to Clauses [14](#) to [17](#) in CSA O86:24.

Other significant changes include the following:

- addition of a new definition for “specified modulus of elasticity” (Clause [3.1](#));
- clarification of the calculation of the K_D factor for non-uniform and multi-directional loads (Clause [5.3.2.3](#));
- addition of a design provision for built-up compression members with piece-to-piece nailing (Clause [6.5.5.4.3](#));
- revisions to Clause [7.5.6.6.1](#) for the application of the K_L and K_{Zbg} factors for glulam bending moment resistance;
- revisions to shear-load coefficient, C_v , for glulam shear resistance (Clause [7.5.7.6](#));
- modification of Table [9.3](#) to add specified capacities for W24 rated oriented strand board (OSB);
- editorial changes to all clauses, especially the terminology and figures in Clause 12;
- revisions to the measurement of shear depth at connections (Clause [12.2.1.6](#));
- revisions to the spacing perpendicular to grain, S_O , for bolt and dowel connections (Table [12.16](#));
- addition of the requirements for fabricators of metal plate connected wood trusses to be certified in accordance with CSA S349 (Clause [12.8](#));
- revisions to Figure [12.16](#) for inclined wood members with nail connections;
- correction to the unit of the lateral slip resistance, y_s , for lag screw lateral deformation (Clause [A.12.6.5.4](#));
