# ACKNOWLEDGMENTS

With gratitude, the Department of State acknowledges the contributions of the following individuals in the creation of the 2020 Codes of New York State:

## STATE FIRE PREVENTION AND BUILDING CODE COUNCIL

Rossana Rosado	Chair – Secretary of State, New York State Department of State Designee - Matthew W. Tebo, Esq.
Francis J. Nerney, Jr.	State Fire Administrator, Office of Fire Prevention and Control Designee - Paul Martin
RuthAnne Visnauskas	Commissioner, Division of Housing and Community Renewal Designee - Michael Weber Designee - Joseph Palozzola
Roberta Reardon	Commissioner, New York State Department of Labor Designee - Vincent R. Rapacciuolo
Honorable Bill de Blasio	Mayor, City of New York Designee - Keith Wen, NYC Department of Buildings
Honorable Michael R. Sabatino, Jr.	Councilmember, City of Yonkers
Claudia K. Braymer, Esq.	County Board of Supervisors, Warren County
David A. Seeley	Supervisor, Town of Irondequoit
Timothy DeRuyscher, P.E. FSFPE	Professional Engineer Representative
Patrick Dolan	Trade Union Representative, Steamfitters Union, 638
Shawn Hamlin, R.A.	Registered Architect Representative, Hamlin Design Group
Robert Hughes	Code Enforcement Representative, Village of Pleasantville
Dominic Marinelli	Persons with Disabilities Representative, United Spinal Association
Joseph J. Toomey	Fire Service Representative, Albany Fire Department
William W. Tuyn	Builders Representative, Forbes Capretto Homes

## DEPARTMENT OF STATE

Rossana Rosado	Secretary of State
Brendan Hughes	Executive Deputy Secretary of State
James W. Leary, Esq.	Assistant Executive Deputy Secretary of State
Mark P. Pattison	Deputy Secretary of State for Local Government
Matthew W. Tebo, Esq.	Deputy Secretary of State for Agency Transformation and External Affairs
John R. Addario, P.E.	Director of the Division of Building Standards and Codes
Brian Tollisen, P.E.	Deputy Director of the Division of Building Standards and Codes
Gerard A. Hathaway, R.A.	Assistant Director for Code Development
Kevin Duerr-Clark, P.E.	Assistant Director for Technical Support
Francis “Nick” McAndrew, P.E.	Assistant Director for Educational Services
Joseph Hill, R.A.	Assistant Director for Code Administration
Jeffrey M. Hinderliter, P.E.	Professional Engineer
Emma Gonzalez-Laders, R.A., LEED AP	Senior Architect
Daniel Carroll	Code Compliance Specialist I
Jane Miller	Program Aide
Joseph P. Ball, Esq.	Supervising Attorney
Luigiota K. Hyde, Esq.	Senior Attorney

## IN MEMORIAM

John H. Flanagan	Code Enforcement Representative, Code Council Member (2003–2017)
Honorable Judith Kennedy	Mayor, City of Newburgh, Code Council Member (2013–2018)
Brendan Fitzgerald	Executive Deputy Secretary of State (2016–2018)

# PREFACE

## Introduction

The *Energy Conservation Construction Code of New York State* (ECCCNYS) establishes minimum requirements for energy-efficient buildings using prescriptive and performance-related provisions. It is founded on broad-based principles that make possible the use of new materials and new energy-efficient designs. This 2020 edition was developed as a derivative work of the 2015 edition of the *International Energy Conservation Code*® (IECC®) published by the International Code Council® (ICC®).

This code contains separate provisions for commercial buildings and for low-rise residential buildings (3 stories or less in height above grade). Each set of provisions, IECC—Commercial Provisions and IECC—Residential Provisions, is separately applied to buildings within its respective scope. Each set of provisions is to be treated separately. Each contains a Scope and Administration chapter, a Definitions chapter, a General Requirements chapter, a chapter containing energy efficiency requirements and existing building provisions applicable to buildings within its scope.

## Intention

This code is founded on principles intended to establish provisions consistent with the scope of an energy conservation code that adequately conserve energy; provisions that do not unnecessarily increase construction costs; provisions that do not restrict the use of new materials, products or methods of construction; and provisions that do not give preferential treatment to particular types or classes of materials, products or methods of construction.

## Letter Designations in Front of Section Numbers

The bracketed letter designations for the party responsible for portions of this code are as follows:

### ICC Code Development Committee

[CE] = International Commercial Energy Conservation Code Development Committee

[RE] = International Residential Energy Conservation Code Development Committee

### New York State Code Development

[NY] = New York State Department of State

## Marginal Markings

Solid vertical lines in the margins within the body of the code indicate a technical change from the requirements of the 2015 edition of the I-Codes®. Deletion indicators in the form of an arrow (➡) are provided in the margin where an entire section, paragraph, exception or table has been deleted or an item in a list of items or a table has been deleted.

## Italicized Terms

Selected words and terms defined in Chapter 2, Definitions, are italicized where they appear in code text and the Chapter 2 definition applies. Where such words and terms are not italicized, common-use definitions apply. The words and terms selected have code-specific definitions that the user should read carefully to facilitate better understanding of the code.

# EFFECTIVE USE OF THE ENERGY CONSERVATION CONSTRUCTION CODE OF NEW YORK STATE

The *Energy Conservation Construction Code of New York State* (ECCCNYS) is a code that regulates minimum energy conservation requirements for new buildings. The ECCCNYS addresses energy conservation requirements for all aspects of energy uses in both commercial and residential construction, including heating and ventilating, lighting, water heating, and power usage for appliances and building systems.

The ECCCNYS is a design document. For example, before one constructs a building, the designer must determine the minimum insulation *R*-values and fenestration *U*-factors for the building exterior envelope. Depending on whether the building is for residential use or for commercial use, the ECCCNYS sets forth minimum requirements for exterior envelope insulation, window and door *U*-factors and SHGC ratings, duct insulation, lighting and power efficiency, and water distribution insulation.

## Arrangement and Format of the 2020 ECCCNYS

The ECCCNYS contains two separate sets of provisions—one for commercial buildings and one for residential buildings. Each set of provisions is applied separately to buildings within their scope. The ECCCNYS—Commercial Provisions apply to all buildings except for residential buildings three stories or less in height. The ECCCNYS—Residential Provisions apply to detached one- and two-family dwellings and multiple single-family dwellings, as well as *Group R-2*, *R-3* and *R-4* buildings three stories or less in height. These scopes are based on the definitions of “Commercial building” and “Residential building,” respectively, in Chapter 2 of each set of provisions. Note that the ECCCNYS—Commercial Provisions therefore contain provisions for residential buildings four stories or greater in height. Each set of provisions is divided into five different parts:

Chapters	Subjects
1–2	Administration and definitions
3	Climate zones and general materials requirements
4	Energy efficiency requirements
5	Existing buildings
	Referenced standards

The following is a chapter-by-chapter synopsis of the scope and intent of the provisions of the *Energy Conservation Construction Code of New York State* and applies to both the commercial and residential energy provisions:

**Chapter 1 Scope and Administration.** This chapter contains provisions for the application, enforcement and administration of subsequent requirements of the code. In addition to establishing the scope of the code, Chapter 1 identifies which buildings and structures come under its purview.

**Chapter 2 Definitions.** Chapter 2 is the repository of the definitions of terms used in the body of the code. Codes are technical documents and every word, term and punctuation mark can impact the meaning of the code text and the intended results. The code often uses terms that have a unique meaning in the code and the code meaning can differ substantially from the ordinarily understood meaning of the term as used outside of the code.

The terms defined in Chapter 2 are deemed to be of prime importance in establishing the meaning and intent of the code text. The user of the code should be familiar with and consult this chapter because the definitions are essential to the correct interpretation of the code and the user may not be aware that a term is defined.

Where understanding of a term's definition is especially key to or necessary for understanding of a particular code provision, the term is shown in *italics*. This is true only for those terms that have a meaning that is unique to the code. In other words, the generally understood meaning of a term or phrase might not be sufficient or consistent with the meaning prescribed by the code; therefore, it is essential that the code-defined meaning be known.

Guidance regarding tense, gender and plurality of defined terms as well as guidance regarding terms not defined in this code is provided.

**Chapter 3 General Requirements.** Chapter 3 specifies the climate zones that will serve to establish the exterior design conditions. In addition, Chapter 3 provides interior design conditions that are used as a basis for assumptions in heating and cooling load calculations, and provides basic material requirements for insulation materials and fenestration materials.

Climate has a major impact on the energy use of most buildings. The code establishes many requirements such as wall and roof insulation *R*-values, window and door thermal transmittance (*U*-factors) and provisions that affect the mechanical systems based on the climate where the building is located. This chapter contains information that will be used to properly assign the building location into the correct climate zone and is used as the basis for establishing or eliminating requirements.

**Chapter 4 Energy Efficiency.** Chapter 4 of each set of provisions contains the technical requirements for energy efficiency.

**Commercial Energy Efficiency.** Chapter 4 of the ECCONS—Commercial Provisions contains the energy-efficiency-related requirements for the design and construction of most types of commercial buildings and residential buildings greater than three stories in height above grade. This chapter defines requirements for the portions of the building and building systems that impact energy use in new commercial construction and new residential construction greater than three stories in height, and promotes the effective use of energy. In addition to energy conservation requirements for the building envelope, this chapter contains requirements that impact energy efficiency for the HVAC systems, the electrical systems and the plumbing systems. It should be noted, however, that requirements are contained in other codes that have an impact on energy conservation. For instance, requirements for water flow rates are regulated by the *Plumbing Code of New York State*.

**Residential Energy Efficiency.** Chapter 4 of the ECCNYS—Residential Provisions contains the energy-efficiency-related requirements for the design and construction of residential buildings regulated under this code. It should be noted that the definition of a *residential building* in this code is unique for this code. In this code, a *residential building* is a detached one- and two-family dwelling and multiple single-family dwellings as well as R-2, R-3 or R-4 buildings three stories or less in height. All other buildings, including residential buildings greater than three stories in height, are regulated by the energy conservation requirements in the ECCONS—Commercial Provisions. The applicable portions of a residential building must comply with the provisions within this chapter for energy efficiency. This chapter defines requirements for the portions of the building and building systems that impact energy use in new residential construction and promotes the effective use of energy. The provisions within the chapter promote energy efficiency in the building envelope, the heating and cooling system and the service water heating system of the building.

**Chapter 5 Existing Buildings.** Chapter 5 of each set of provisions contains the technical energy efficiency requirements for existing buildings. Chapter 5 provisions address the maintenance of buildings in compliance with the code as well as how additions, alterations, repairs and changes of occupancy need to be addressed from the standpoint of energy efficiency. Specific provisions are provided for historic buildings.

**Chapter 6 Referenced Standards.** The code contains numerous references to standards that are used to regulate materials and methods of construction. Chapter 6 contains a comprehensive list of all standards that are referenced in the code. The standards are part of the code to the extent of the reference to the standard. Compliance with the referenced standard is necessary for compliance with this code. By providing specifically adopted standards, the construction and installation requirements necessary for compliance with the code can be readily determined. The basis for code compliance is, therefore, established and available on an equal basis to the building official, contractor, designer and owner.

Chapter 6 is organized in a manner that makes it easy to locate specific standards. It lists all of the referenced standards, alphabetically, by acronym of the promulgating agency of the standard. Each agency's standards are then listed in either alphabetical or numeric order based on the standard identification. The list also contains the title of the standard; the edition (date) of the standard referenced; any addenda; and the section or sections of this code that reference the standard.

## Abbreviations and Notations

The following is a list of common abbreviations and units of measurement used in this code. Some of the abbreviations are for terms defined in Chapter 2. Others are terms used in various tables and text of the code.

AFUE	Annual fuel utilization efficiency
bhp	Brake horsepower (fans)
Btu	British thermal unit
Btu/h-ft <sup>2</sup>	Btu per hour per square foot
C-factor	See Chapter 2—Definitions
CDD	Cooling degree days
cfm	Cubic feet per minute
cfm/ft <sup>2</sup>	Cubic feet per minute per square foot
ci	Continuous insulation
COP	Coefficient of performance
DCV	Demand control ventilation
°C	Degrees Celsius
°F	Degrees Fahrenheit
DWHR	Drain water heat recovery
DX	Direct expansion
$E_c$	Combustion efficiency
$E_v$	Ventilation efficiency
$E_t$	Thermal efficiency
EER	Energy efficiency ratio
EF	Energy factor
ERI	Energy rating index
F-factor	See Chapter 2—Definitions
FDD	Fault detection and diagnostics
FEG	Fan efficiency grade
FL	Full load
ft <sup>2</sup>	Square foot
gpm	Gallons per minute
HDD	Heating degree days
hp	Horsepower
HSPF	Heating seasonal performance factor
HVAC	Heating, ventilating and air conditioning
IEER	Integrated energy efficiency ratio
IPLV	Integrated Part Load Value

Kg/m <sup>2</sup>	Kilograms per square meter
KW	Kilowatt
LPD	Light power density (lighting power allowance)
L/s	Liters per second
Ls	Liner system
m <sup>2</sup>	Square meters
MERV	Minimum efficiency reporting value
NAECA	National Appliance Energy Conservation Act
NPLV	Nonstandard Part Load Value
Pa	Pascal
PF	Projection factor
pcf	Pounds per cubic foot
psf	Pounds per square foot
PTAC	Packaged terminal air conditioner
PTHP	Packaged terminal heat pump
R-value	See Chapter 2—Definitions
SCOP	Sensible coefficient of performance
SEER	Seasonal energy efficiency ratio
SHGC	Solar Heat Gain Coefficient
SPVAC	Single packaged vertical air conditioner
SPVHP	Single packaged vertical heat pump
SRI	Solar reflectance index
SWHF	Service water heat recovery factor
U-factor	See Chapter 2—Definitions
VAV	Variable air volume
VRF	Variable refrigerant flow
VT	Visible transmittance
W	Watts
w.c.	Water column
w.g.	Water gauge
