About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC online collection - oc.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC online collection - oc.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

CONTENTS

FOREWORD	9
1 Scope	11
2 Normative references	11
3 Terms and definitions	12
4 General principles for the application of surge arresters	21
5 Surge arrester fundamentals and applications issues	22
5.1 Evolution of surge protection equipment	22
5.2 Different types and designs and their electrical and mechanical characteristics	23
5.2.1 General	23
5.2.2 Metal-oxide arresters without gaps according to IEC 60099-4	24
5.2.3 Metal-oxide surge arresters with internal series gaps according to IEC 60099-6	34
5.2.4 Externally gapped line arresters (EGLA) according to IEC 60099-5	36
5.2.5 Application considerations	39
6 Insulation coordination and surge arrester applications	52
6.1 General	52
6.2 Insulation coordination overview	52
6.2.1 General	52
6.2.2 IEC insulation coordination procedure	52
6.2.3 Overvoltages	53
6.2.4 Line insulation coordination: Arrester Application Practices	59
6.2.5 Substation insulation coordination: Arrester application practices	64
6.2.6 Insulation coordination studies	68
6.3 Selection of arresters	69
6.3.1 General	69
6.3.2 General procedure for the selection of surge arresters	70
6.3.3 Selection of line surge arresters, LSA	84
6.3.4 Selection of arresters for cable protection	93
6.3.5 Selection of arresters for distribution systems – special attention	95
6.3.6 Application and coordination of disconnectors	96
6.3.7 Selection of UHV arresters	98
6.4 Standard and special service conditions	99
6.4.1 Standard service conditions	99
6.4.2 Special service conditions	99
7 Surge arresters for special applications	103
7.1 Surge arresters for transformer neutrals	103
7.1.1 General	103
7.1.2 Surge arresters for fully insulated transformer neutrals	103
7.1.3 Surge arresters for neutrals of transformers with non-uniform insulation	104
7.2 Surge arresters between phases	104
7.2.1 General	104
7.2.2 6-arrester arrangement	104
7.2.3 4-arrester (Neptune) arrangement	104
7.3 Surge arresters for rotating machines	105
7.4 Surge arresters in parallel	106

7.4.1	General	106
7.4.2	Combining different designs of arresters	107
7.5	Surge arresters for capacitor switching	107
7.6	Surge arresters for series capacitor banks	109
8	Asset management of surge arresters	110
8.1	General.....	110
8.2	Managing surge arresters in a power grid	110
8.2.1	Asset database.....	110
8.2.2	Technical specifications.....	110
8.2.3	Strategic spares	110
8.2.4	Transportation and storage.....	111
8.2.5	Commissioning	111
8.3	Maintenance	111
8.3.1	General	111
8.3.2	Polluted arrester housing.....	112
8.3.3	Coating of arrester housings.....	112
8.3.4	Inspection of disconnectors on surge arresters.....	112
8.3.5	Line surge arresters.....	112
8.4	Performance and diagnostic tools	112
8.5	End of life	113
8.5.1	General	113
8.5.2	GIS arresters.....	113
8.6	Disposal and recycling	113
Annex A (informative)	Determination of temporary over voltages due to earth faults	114
Annex B (informative)	Current practice	118
Annex C (informative)	Arrester modelling techniques for studies involving insulation coordination and energy requirements	119
C.1	Arrester models for impulse simulations.....	119
C.2	Application to insulation coordination studies	120
C.3	Summary of proposed arrester models to be used for impulse applications.....	120
Annex D (informative)	Diagnostic indicators of metal-oxide surge arresters in service.....	122
D.1	General.....	122
D.1.1	Overview.....	122
D.1.2	Fault indicators.....	122
D.1.3	Disconnectors.....	122
D.1.4	Surge counters	122
D.1.5	Monitoring spark gaps	123
D.1.6	Temperature measurements	123
D.1.7	Leakage current measurements of gapless metal-oxide arresters	123
D.2	Measurement of the total leakage current	128
D.3	Measurement of the resistive leakage current or the power loss.....	129
D.3.1	General	129
D.3.2	Method A1 – Using the applied voltage signal as a reference	129
D.3.3	Method A2 – Compensating the capacitive component using a voltage signal	130
D.3.4	Method A3 – Compensating the capacitive component without using a voltage signal	131
D.3.5	Method A4 – Capacitive compensation by combining the leakage current of the three phases.....	131

D.3.6	Method B1 – Third order harmonic analysis	132
D.3.7	Method B2 – Third order harmonic analysis with compensation for harmonics in the voltage	132
D.3.8	Method B3 – First order harmonic analysis	133
D.3.9	Method C – Direct determination of the power losses	133
D.4	Leakage current information from the arrester manufacturer	133
D.5	Summary of diagnostic methods	135
Annex E (informative) Typical data needed from arrester manufacturers for proper selection of surge arresters.....		136
Annex F (informative) Typical maximum residual voltages for metal-oxide arresters without gaps according to IEC 60099-4.....		137
Annex G (informative) Steepness reduction of incoming surge with additional line terminal surge capacitance		138
G.1	General.....	138
G.2	Steepness reduction factor	138
G.3	Equivalent capacitance associated with incoming surge fronts.....	140
G.3.1	General	140
G.3.2	Examples of incoming surge steepness change, f_S , using typical 550 kV & 245 kV circuit parameters.....	142
G.3.3	Change in coordination withstand voltage, U_{CR} , with steepness reduction, f_S :	142
G.4	EMTP & capacitor charging models for steepness change comparisons at line open terminal	142
G.5	Typical steepness ($S_0= 1000$ kV/ μ s), change comparisons with C_0 & C_S	144
G.6	Faster steepness (2000 kV/ μ s), change comparisons with C_0 & C_S	146
Annex H (informative) Comparison of the former energy classification system based on line discharge classes and the present classification system based on thermal energy ratings for operating duty tests and repetitive charge transfer ratings for repetitive single event energies.....		149
H.1	General.....	149
H.2	Examples.....	152
Annex I (informative) Estimation of arrester cumulative charges and energies during line switching.....		157
I.1	Simplified method of estimating arrester line switching energies	157
I.1.1	Introduction	157
I.1.2	Simplified method calculation steps	158
I.1.3	Typical line surge impedances with bundled conductors	160
I.1.4	Prospective switching surge overvoltages.....	160
I.1.5	Use of IEC 60099-4:2009 to obtain values for surge impedance and prospective surge voltages	161
I.2	Example of charge and energy calculated using line discharge parameters.....	162
I.3	Arrester line switching energy examples	166
I.3.1	General	166
I.3.2	Case 1 – 145 kV	169
I.3.3	Case 2 – 242 kV	169
I.3.4	Case 3 – 362 kV	169
I.3.5	Case 4 – 420 kV	170
I.3.6	Case 5 – 550 kV	170
Annex J (informative) End of life and replacement of old gapped SiC-arresters.....		182
J.1	Overview.....	182

J.2	Design and operation of SiC-arresters	182
J.3	Failure causes and aging phenomena	182
J.3.1	General	182
J.3.2	Sealing problems	182
J.3.3	Equalization of internal and external pressure and atmosphere	183
J.3.4	Gap electrode erosion	183
J.3.5	Ageing of grading components	184
J.3.6	Changed system conditions	184
J.3.7	Increased pollution levels	184
J.4	Possibility to check the status of the arresters	184
J.5	Advantages of planning replacements ahead	184
J.5.1	General	184
J.5.2	Improved reliability	185
J.5.3	Cost advantages	185
J.5.4	Increased safety requirements	185
J.6	Replacement issues	185
J.6.1	General	185
J.6.2	Establishing replacement priority	185
J.6.3	Selection of MO arresters for replacement installations	186
	Bibliography	187

Figure 1	– Example of GIS arresters of three mechanical/one electrical column (middle) and one column (left) design and current path of the three mechanical/one electrical column design (right)	29

INTERNATIONAL ELECTROTECHNICAL COMMISSION

SURGE ARRESTERS –**Part 5: Selection and application recommendations****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60099-5 has been prepared by IEC technical committee 37: Surge arresters.

This third edition cancels and replaces the second edition published in 2013. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition regarding the new surge arrester classification introduced in IEC 60099-4:2014:

- a) Expanded discussion of comparison between the old and new classification and how to calculate or estimate the corresponding charge for different stresses.
- b) New annexes dealing with:
 - Comparison between line discharge classes and charge classification
 - Estimation of arrester cumulative charges and energies during line switching

The text of this standard is based on the following documents:

FDIS	Report on voting
37/437/FDIS	37/439/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60099 series, published under the general title *Surge arresters*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

SURGE ARRESTERS –

Part 5: Selection and application recommendations

1 Scope

This part of IEC 60099 provides information, guidance, and recommendations for the selection and application of surge arresters to be used in three-phase systems with nominal voltages above 1 kV. It applies to gapless metal-oxide surge arresters as defined in IEC 60099-4, to surge arresters containing both series and parallel gapped structure – rated 52 kV and less as defined in IEC 60099-6 and metal-oxide surge arresters with external series gap for overhead transmission and distribution lines (EGLA) as defined in IEC 60099-8. In Annex J, some aspects regarding the old type of SiC gapped arresters are discussed.

Surge arrester residual voltage is a major parameter to which most users have paid a lot of attention to when selecting the type and rating. Typical maximum residual voltages are given in Annex F. It is likely, however, that for some systems, or in some countries, the requirements on system reliability and design are sufficiently uniform, so that the recommendations of the present standard may lead to the definition of narrow ranges of arresters. The user of surge arresters will, in that case, not be required to apply the whole process introduced here to any new installation and the selection of characteristics resulting from prior practice may be continued.

Annexes H and I present comparisons and calculations between old line discharge classification and new charge classification.
