About the IEC
The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications
The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform
The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,…). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished
Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc
If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org
The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary
67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

CONTENTS

FOREWORD 5
1 Scope 7
2 Normative references 7
3 Terms and definitions 8
4 Installation considerations 8
4.1 General remarks 8
4.2 Bending radius of installed cable 8
4.3 Climatic conditions 8
5 Materials and cable construction 8
5.1 General remarks 8
5.2 Cable construction 9
5.3 Conductor 9
5.4 Insulation 9
5.5 Cable element 9
5.6 Screening of the cable element 9
5.7 Cable make-up 9
5.8 Screening of the cable core 9
5.9 Sheath 9
5.10 Identification 10
5.11 Finished cable 10
6 Characteristics and requirements 10
6.1 General remarks 10
6.2 Electrical characteristics and tests 10
6.2.1 Conductor resistance 10
6.2.2 Resistance unbalance 10
6.2.3 Dielectric strength 11
6.2.4 Insulation resistance 11
6.2.5 Mutual capacitance 11
6.2.6 Capacitance unbalance 11
6.2.7 Transfer impedance 11
6.2.8 Coupling attenuation 11
6.2.9 Current-carrying capacity 12
6.3 Transmission characteristics 12
6.3.1 Velocity of propagation (phase velocity) 12
6.3.2 Phase delay and differential delay (delay skew) 12
6.3.3 Attenuation (α) 12
6.3.4 Unbalance attenuation (TCL and $EL\ TCTL$) 13
6.3.5 Alien (exogenous) near-end crosstalk ($PS\ ANEXT$) 13
6.3.6 Alien (exogenous) far-end crosstalk ($PS\ AACR\text{-}F$) 14
6.3.7 Alien (exogenous) crosstalk of bundled cables 14
6.3.8 Impedance 14
6.3.9 Return loss (RL) 14
6.4 Mechanical and dimensional characteristics and requirements 15
6.4.1 Dimensional requirements 15
6.4.2 Elongation at break of the conductor 15
6.4.3 Tensile strength of the insulation 15

6.4.4 Elongation at break of the insulation 15
6.4.5 Adhesion of the insulation to the conductor 15
6.4.6 Elongation at break of the sheath 15
6.4.7 Tensile strength of the sheath 15
6.4.8 Crush test of the cable 15
6.4.9 Impact test of the cable 15
6.4.10 Bending under tension 16
6.4.11 Repeated bending of the cable 16
6.4.12 Tensile performance of the cable 16
6.4.13 Shock-test requirements of the cable 16
6.4.14 Bump-test requirements of the cable 16
6.4.15 Vibration-test requirements of a cable 16
6.5 Environmental characteristics 16
6.5.1 Shrinkage of the insulation 16
6.5.2 Wrapping test of the insulation after thermal ageing 16
6.5.3 Bending test of insulation at low temperature 16
6.5.4 Elongation at break of the sheath after ageing 16
6.5.5 Tensile strength of the sheath after ageing 16
6.5.6 Sheath pressure test at high temperature 16
6.5.7 Cold bend test of the cable 17
6.5.8 Heat shock test 17
6.5.9 Damp heat steady state 17
6.5.10 Solar radiation 17
6.5.11 Solvents and contaminating fluids 17
6.5.12 Salt mist and sulphur dioxide 17
6.5.13 Water immersion 17
6.5.14 Hygroscopicity 17
6.5.15 Wicking 17
6.5.16 Flame propagation characteristics of a single cable 17
6.5.17 Flame propagation characteristics of bunched cables 17
6.5.18 Halogen gas evolution 17
6.5.19 Smoke generation 18
6.5.20 Toxic gas emission 18
6.5.21 Integrated fire test method for cables in environmental air handling spaces 18
7 Bundled cable requirements 18
7.1 General 18
7.2 Single pairs sharing one sheath 18

MULTICORE AND SYMMETRICAL PAIR/QUAD CABLES FOR DIGITAL COMMUNICATIONS –

Part 11: Symmetrical single pair cables with transmission characteristics up to 600 MHz – Horizontal floor wiring – Sectional specification

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61156-11 has been prepared by subcommittee 46C: Wires and symmetric cables, of IEC technical committee 46: Cables, wires, waveguides, RF connectors, RF and microwave passive components and accessories.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
46C/1118/FDIS	46C/1123/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61156 series, published under the general title *Multicore and symmetrical pair/quad cables for digital communications*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

MULTICORE AND SYMMETRICAL PAIR/QUAD CABLES FOR DIGITAL COMMUNICATIONS –

Part 11: Symmetrical single pair cables with transmission characteristics up to 600 MHz – Horizontal floor wiring – Sectional specification

1 Scope

This part of IEC 61156 describes cables intended to be used for transmission of 1 Gbps over a single twisted pair for office, home and industrial application. An example for existing application is 1000BASE-T1, see ISO/IEC TR 11801-9906[1]. The transmission characteristics of these cables are specified up to a frequency of 600 MHz and at a temperature of 20 °C. The cable type recognised is intended to be used for shielded channels with a nominal length of 40 m. Possible designs are U/FTP, X/UTP and X/FTP, where X stands for F, S or SF. A blank detail specification can be found in Annex A.

These cables can comprise more than one pair in the event that several systems are operated in parallel. In this case, refer to Clause 7 of this document.

The cables covered by this document are intended to operate with voltages and currents normally encountered in communication systems. While these cables are not intended to be used in conjunction with low impedance sources, for example, the electric power supplies of public utility mains, they are intended to be used to support the delivery of low-voltage remote powering applications.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60708:2005, *Low-frequency cables with polyolefin insulation and moisture barrier polyolefin sheath*
