#### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications provided, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

#### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC -

[webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications, symboles graphiques et le glossaire. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 500 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 25 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

## CONTENTS

FOREWORD.....	7
INTRODUCTION.....	9
1 Scope.....	10
2 Normative references .....	10
3 Terms and definitions .....	10
3.1 General terms and definitions .....	11
3.2 Terms and definitions related to control levels, control modes and operational modes .....	11
3.3 Terms and definitions from control theory .....	12
3.4 Subscripts and prefixes.....	13
3.5 Terms and definitions related to the plant and the units .....	13
3.6 Terms and definitions related to the governing system.....	16
4 Governing system structure .....	23
4.1 General.....	23
4.2 Main control functions .....	24
4.2.1 General .....	24
4.2.2 Speed control .....	24
4.2.3 Power output control.....	24
4.2.4 Opening control .....	24
4.2.5 Water level control.....	25
4.2.6 Flow control.....	25
4.3 Configurations of combined controllers .....	25
4.3.1 General .....	25
4.3.2 Parallel structure .....	25
4.3.3 Series structures .....	26
4.4 Special control functions.....	26
4.4.1 Feed forward control .....	26
4.4.2 Surge tank level or pressure feedback.....	27
4.5 Pump-turbine control .....	28
4.5.1 General .....	28
4.5.2 Conventional pump-turbine control .....	28
4.5.3 Variable speed pump-turbine control .....	28
4.6 Manual control .....	30
4.7 Linearization .....	30
4.8 Limitation functions.....	30
4.9 Bumpless control modes transition.....	31
4.10 Optimization control .....	31
5 Functional performance .....	31
5.1 General.....	31
5.2 Modelling and digital simulation .....	32
5.2.1 General .....	32
5.2.2 Water passages.....	33
5.2.3 Turbine, generator, electrical grid .....	33
5.2.4 Control concept .....	33
5.2.5 Hardware-in-the-loop simulation .....	34
5.2.6 Personnel training .....	34
5.2.7 Inaccuracy of plant simulators .....	34

5.3	Characteristic parameters for PID-controllers .....	35
5.3.1	General .....	35
5.3.2	Permanent droop .....	35
5.3.3	Proportional action coefficient $K_P$ , integral action time $T_I$ , and derivative action time $T_D$ .....	35
5.3.4	Tuning of turbine governing systems .....	36
5.4	Other parameters of the governing systems .....	37
5.4.1	Command signal adjustments for controlled variables (speed, power output, etc.) and load limiter .....	37
5.4.2	Governor insensitivity $i_X/2$ .....	37
5.4.3	Dynamic characteristics of servo-positioner .....	37
5.4.4	Parameters of servo-positioner .....	39
5.4.5	Servo-positioner non-linearity by kinematics .....	40
6	Servo positioner configurations .....	40
6.1	Servo-positioners .....	40
6.2	Configurations of servo-positioners .....	41
6.3	Multiple actuator control .....	41
6.3.1	General .....	41
6.3.2	Parallel structure .....	42
6.3.3	Series structure .....	42
6.3.4	Individual control .....	42
6.4	Dual regulation of turbines with controllable guide vane and runner blade angles .....	43
6.5	Dual control of turbines with needles and deflectors .....	43
6.6	Other relationships .....	43
7	Instrumentation .....	43
7.1	General .....	43
7.2	Rotational speed .....	44
7.3	Power output .....	44
7.4	Water level .....	44
7.5	Actuator position (stroke) .....	44
7.6	Signal transmission from electronic transmitters .....	44

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**GUIDELINES TO SPECIFICATION OF  
HYDRAULIC TURBINE GOVERNING SYSTEMS**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61362 has been prepared by IEC technical committee 4: Hydraulic turbines. It is an International Standard.

This third edition cancels and replaces the second edition published in 2012. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) adoption of parts of IEC 60308:2005 which deal with specification matters;
- b) introduction of several new technical topics;
- c) overall editorial revision.

The text of this document is based on the following documents:

Draft	Report on voting
4/500/FDIS	4/509/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

While a standard for the testing of hydraulic turbine governing systems had been existing for a very long time (IEC 60308 published in 1970)<sup>1</sup>, guidelines for the specification of hydraulic turbine governing systems were missing until 1998. The need for such guidelines became more and more urgent with the fast development and the new possibilities especially of the digital components of the governor.

While the first edition was written more or less as a supplement to the already existing guide for testing, the objective of the second edition was to be the leading guide with respect to turbine governing systems.

The second edition of this document took into account the experience with the guide until 2012 as well as the progress in the state of the art of the underlying technologies.

This third edition was developed together with the third edition of the standard for the testing of hydraulic turbine governing systems (IEC 60308) in order to harmonize their contents and their publishing dates.

Furthermore, the standards are kept open for state of the art by introducing new topics and harmonizing the structure as well as the terms and definitions for both standards.

---

<sup>1</sup> IEC 60308:1970, *International code for testing of speed governing systems for hydraulic turbines*. This publication was withdrawn and replaced with IEC 60308:2005.

# GUIDELINES TO SPECIFICATION OF HYDRAULIC TURBINE GOVERNING SYSTEMS

## 1 Scope

This document includes relevant technical data used to describe hydraulic turbine governing systems and to define their performance. It is aimed at unifying and thus facilitating the selection of relevant parameters in bidding specifications and technical bids. It serves also as a basis for setting up technical guarantees.

The scope of this document is restricted to the turbine governing level. Additionally some remarks about the control loops of the plant level and about interactions with the electrical grid in case of primary and secondary frequency control (see also Annex B and Annex C) are made for better understanding without making a claim to be complete.

Important topics covered by the guidelines are:

- speed, power, water level, opening and flow (discharge) control for reaction and impulse-type turbines including double regulated machines;
- means of providing actuating energy;
- safety devices for emergency shutdown, etc.

To facilitate the setting up of specifications, these guidelines also include data sheets, which are filled out by the customer and the supplier in the various stages of the project and the contract.

Acceptance tests and specific test procedures are outside the scope of this document; those topics are covered by IEC 60308.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60308, *Hydraulic turbines – Testing of control systems*

IEC 61131-2, *Industrial-process measurement and control – Programmable controllers – Part 2: Equipment requirements and tests*

## 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

- IEC Electropedia: available at <https://www.electropedia.org/>
- ISO Online browsing platform: available at <https://www.iso.org/obp>
