About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications provided, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications, symboles graphiques et le glossaire. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 500 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 25 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references	8
3 Terms, definitions, symbols and abbreviated terms.....	10
3.1 Terms and definitions.....	10
3.2 Symbols and abbreviated terms	12
4 Reliability considerations.....	14
4.1 Approaches to reliability based design	14
4.2 Models and basic variables for structural verification	16
4.2.1 Reliability assessment	16
4.2.2 Material properties.....	16
4.3 Partial safety factors and reliability targets.....	16
5 Application of loads and analysis models.....	17
5.1 Loads models	17
5.2 Analysis model.....	17
5.2.1 General	17
5.2.2 Load path modelling	17
5.2.3 Application of load components	17
5.2.4 Boundary conditions	18
5.3 Modelling of nonlinear mechanical behaviour.....	18
5.3.1 General	18
5.3.2 Nonlinear stress effects	18
5.3.3 Application of ultimate load	18
5.3.4 Application of fatigue loads.....	18
5.4 Partial safety factors	19
5.5 Partial safety factor for resistance.....	21
5.6 Nacelle and hub component considerations	22
5.6.1 General	22
5.6.2 Hub structure and bolts.....	22
5.6.3 Nacelle front structure (alternatively: mechanical drive-train structure)	23
5.6.4 Gearbox structure.....	23
5.6.5 Tower structure	23
5.6.6 Nacelle rear structure	24
5.6.7 Nacelle cover and spinner	24
6 Deflection analysis	24
7 Strength verification.....	25
7.1 General.....	25
7.2 Determination of stress and strain.....	25
7.3 Material properties	25
7.3.1 Material data	25
7.3.2 Influence of size	26
7.4 Static strength assessment.....	26
7.4.1 Assessment process.....	26
7.4.2 Cast, forged and steel components.....	26
7.4.3 Welded structures.....	28

7.4.4	Bolted joints.....	28
7.4.5	Fibre reinforced material.....	29
7.5	Fatigue strength assessment.....	29
7.5.1	Fatigue strength methods.....	29
7.5.2	Determination of local stresses.....	29
7.5.3	Stress hypothesis for fatigue.....	29
7.5.4	S/N curves.....	30
7.5.5	Influence on fatigue strength.....	30
7.5.6	Partial safety factors for fatigue.....	31
7.5.7	Damage accumulation.....	32
7.5.8	Bolted joints.....	33
7.5.9	Fibre reinforced material.....	33
7.6	Fracture mechanics assessment.....	33
7.6.1	General.....	33
7.6.2	Define objective.....	34
7.6.3	Material parameter.....	34
7.6.4	Defect model.....	35
7.6.5	Structural model.....	36
7.6.6	Loading.....	36
7.6.7	Strength assessment.....	37
7.7	Fracture mechanics-based design.....	40
8	Material data for design from testing.....	41
8.1	Qualification of material.....	41
8.2	Derivation of static strength and impact energy properties (base material).....	41
8.3	Derivation of fatigue strength properties (base material).....	41
8.4	Welded joints.....	42
8.5	Cast, forged and steel.....	42
8.5.1	Derivation of static strength properties.....	42
8.5.2	Fracture toughness.....	42
8.5.3	Derivation of fatigue strength properties.....	43
8.6	Bolts.....	44
8.7	Nacelle cover.....	44
9	Model verification and validation.....	44
Annex A	(informative) Model verification and validation methods.....	46
A.1	General.....	46
A.2	Verification.....	46
A.3	Validation (laboratory testing).....	46
A.4	Validation (field testing).....	46
Annex B	(informative) Welded joint stresses.....	47
Annex C	(informative) S-N curve determination by test, statistical evaluation and influencing factors.....	48
C.1	General.....	48
C.2	S-N curve.....	48
C.3	Specimens.....	48
C.4	Test procedure.....	48
C.4.1	General.....	48
C.4.2	Finite lifetime.....	49
C.4.3	Long life fatigue regime.....	49

C.5	Influencing factors of S-N curve	49
Annex D (informative)	Limit state equations	50
D.1	General.....	50
D.2	Yielding failure.....	50
D.3	Fatigue limit state equation	51
D.4	Fatigue assessment based on fracture mechanics	55
Annex E (informative)	Load effect uncertainty computation	58
Annex F (informative)	Considerations for structural elements.....	60
F.1	General.....	60
F.2	Global and local failures	60
F.3	Mean stress influence	60

INTERNATIONAL ELECTROTECHNICAL COMMISSION

WIND ENERGY GENERATION SYSTEMS –

Part 8: Design of wind turbine structural components

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61400-8 has been prepared by IEC technical committee 88: Wind energy generation systems. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
88/1010/FDIS	88/1023/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts of the IEC 61400 series, under the general title: *Wind energy generation systems*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This part of the IEC 61400 series outlines the minimum requirements for the design of wind turbine nacelle-based structures and is not intended for use as a complete design specification or instruction manual.

Several different groups can be responsible for undertaking the various elements of the design, manufacture, assembly, installation and maintenance of a wind turbine nacelle and for ensuring that the requirements of this document are met. The division of responsibilities between these parties is a contractual matter and is outside the scope of this document.

The requirements stated in this document may be altered if it can be sufficiently demonstrated that the structural integrity of the system is not compromised.

The specific scope of the document is provided in Clause 1. For cases out of the scope of this document, reference should be made to relevant IEC/ISO standards.

WIND ENERGY GENERATION SYSTEMS –

Part 8: Design of wind turbine structural components

1 Scope

This part of IEC 61400 outlines the minimum requirements for the design of wind turbine nacelle-based structures and is not intended for use as a complete design specification or instruction manual. This document focuses on the structural integrity of the structural components constituted within and in the vicinity of the nacelle, including the hub, main frame, main shaft, associated structures of direct-drives, gearbox structures, yaw structural connection, nacelle enclosure. It also addresses connections of the structural components to control and protection mechanisms, as well as structural connections of electrical units and other mechanical systems. This document focuses primarily on ferrous material based nacelle structures but can apply to other materials also as appropriate. The design of bolted and welded joints in the nacelle structures is included, as well as cast and forged components. Material testing requirements to use in the design process for nacelle structures are specified. While the structural connections of the gearbox and the main shaft are in the scope, the design of the gears and bearings are not included.

The safety level of the wind turbine designed according to this document shall be at or exceed the level inherent in IEC 61400-1:2019. Probabilistic methods to calibrate partial safety factors and for use in the design process are provided.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
