### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC online collection - [oc.iec.ch](http://oc.iec.ch)

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 18 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

---

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC -

##### [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC online collection - [oc.iec.ch](http://oc.iec.ch)

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

## CONTENTS

|  |    |
|--|----|
| FOREWORD.....  | 8  |
| INTRODUCTION.....  | 10 |
| 1 Scope.....   | 11 |
| 2 Normative references .....   | 12 |
| 3 Terms, definitions and abbreviations .....                               | 13 |
| 3.1 Alphabetical list of definitions.....                                  | 13 |
| 3.2 Terms and definitions.....   | 15 |
| 3.3 Abbreviations.....   | 28 |
| 4 Design process of an SCS and management of functional safety.....        | 28 |
| 4.1 Objective .....  | 28 |
| 4.2 Design process .....   | 29 |
| 4.3 Management of functional safety using a functional safety plan .....   | 31 |
| 4.4 Configuration management .....   | 33 |
| 4.5 Modification .....   | 33 |
| 5 Specification of a safety function .....                                 | 34 |
| 5.1 Objective .....  | 34 |
| 5.2 Safety requirements specification (SRS).....                           | 34 |
| 5.2.1 General .....  | 34 |
| 5.2.2 Information to be available.....                                     | 34 |
| 5.2.3 Functional requirements specification.....                           | 35 |
| 5.2.4 Estimation of demand mode of operation.....                          | 35 |
| 5.2.5 Safety integrity requirements specification.....                     | 36 |
| 6 Design of an SCS.....  | 37 |
| 6.1 General.....   | 37 |
| 6.2 Subsystem architecture based on top down decomposition .....           | 37 |
| 6.3 Basic methodology – Use of subsystem .....                             | 37 |
| 6.3.1 General .....  | 37 |
| 6.3.2 SCS decomposition .....  | 38 |
| 6.3.3 Sub-function allocation .....  | 39 |
| 6.3.4 Use of a pre-designed subsystem.....                                 | 39 |
| 6.4 Determination of safety integrity of the SCS.....                      | 40 |
| 6.4.1 General .....  | 40 |
| 6.4.2 FTH.....   | 40 |
| 6.5 Requirements for systematic safety integrity of the SCS .....          | 41 |
| 6.5.1 Requirements for the avoidance of systematic hardware failures ..... | 41 |
| 6.5.2 Requirements for the control of systematic faults.....               | 42 |
| 6.6 Electromagnetic immunity .....   | 43 |
| 6.7 Software based manual parameterization.....                            | 43 |
| 6.7.1 General .....  | 43 |
| 6.7.2 Influences on safety-related parameters .....                        | 43 |
| 6.7.3 Requirements for software based manual parameterization .....        | 44 |
| 6.7.4 Verification of the parameterization tool.....                       | 45 |
| 6.7.5 Performance of software based manual parameterization .....          | 45 |
| 6.8 Security aspects .....   | 45 |
| 6.9 Aspects of periodic testing .....                                      | 46 |
| 7 Design and development of a subsystem.....                               | 46 |

|        |  |    |
|--------|--|----|
| 7.1    | General.....   | 46 |
| 7.2    | Subsystem architecture design .....  | 47 |
| 7.3    | Requirements for the selection and design of subsystem and subsystem elements .....  | 48 |
| 7.3.1  | General .....  | 48 |
| 7.3.2  | Systematic integrity .....   | 48 |
| 7.3.3  | Fault consideration and fault exclusion .....  | 51 |
| 7.3.4  | Failure rate of subsystem element .....  | 52 |
| 7.4    | Architectural constraints of a subsystem .....                                       | 55 |
| 7.4.1  | General .....  | 55 |
| 7.4.2  | Estimation of safe failure fraction ( <i>SFF</i> ) .....                             | 56 |
| 7.4.3  | Behaviour (of the SCS) on detection of a fault in a subsystem .....                  | 57 |
| 7.4.4  | Realization of diagnostic functions .....  | 58 |
| 7.5    | Subsystem design architectures.....  | 59 |
| 7.5.1  | General .....  | 59 |
| 7.5.2  | Basic subsystem architectures.....   | 59 |
| 7.5.3  | Basic requirements .....   | 61 |
| 7.6    | <i>PFH</i> of subsystems .....   | 62 |
| 7.6.1  | General .....  | 62 |
| 7.6.2  | Methods to estimate the <i>PFH</i> of a subsystem .....                              | 62 |
| 7.6.3  | Simplified approach to estimation of contribution of common cause failure (CCF)..... | 62 |
| 8      | Software.....  | 62 |
| 8.1    | General.....   | 62 |
| 8.2    | Definition of software levels .....  | 63 |
| 8.3    | Software – Level 1 .....   | 64 |
| 8.3.1  | Software safety lifecycle – SW level 1 .....   | 64 |
| 8.3.2  | Software design – SW level 1 .....   | 65 |
| 8.3.3  | Module design – SW level 1.....  | 67 |
| 8.3.4  | Coding – SW level 1 .....  | 67 |
| 8.3.5  | Module test – SW level 1 .....   | 68 |
| 8.3.6  | Software testing – SW level 1 .....  | 68 |
| 8.3.7  | Documentation – SW level 1.....  | 69 |
| 8.3.8  | Configuration and modification management process – SW level 1.....                  | 69 |
| 8.4    | Software level 2.....  | 70 |
| 8.4.1  | Software safety lifecycle – SW level 2 .....   | 70 |
| 8.4.2  | Software design – SW level 2 .....   | 71 |
| 8.4.3  | Software system design – SW level 2 .....  | 73 |
| 8.4.4  | Module design – SW level 2.....  | 73 |
| 8.4.5  | Coding – SW level 2 .....  | 74 |
| 8.4.6  | Module test – SW level 2 .....   | 75 |
| 8.4.7  | Software integration testing SW level 2.....   | 75 |
| 8.4.8  | Software testing SW level 2.....   | 75 |
| 8.4.9  | Documentation – SW level 2.....  | 76 |
| 8.4.10 | Configuration and modification management process – SW level 2.....                  | 77 |
| 9      | Validation .....   | 77 |
| 9.1    | Validation principles.....   | 77 |
| 9.1.1  | Validation plan.....   | 80 |
| 9.1.2  | Use of generic fault lists .....   | 80 |

|                       |   |     |
|-----------------------|---|-----|
| 9.1.3                 | Specific fault lists .....  | 80  |
| 9.1.4                 | Information for validation .....                                  | 81  |
| 9.1.5                 | Validation record .....   | 81  |
| 9.2                   | Analysis as part of validation .....                              | 82  |
| 9.2.1                 | General .....   | 82  |
| 9.2.2                 | Analysis techniques .....   | 82  |
| 9.2.3                 | Verification of safety requirements specification (SRS) .....     | 82  |
| 9.3                   | Testing as part of validation .....                               | 83  |
| 9.3.1                 | General .....   | 83  |
| 9.3.2                 | Measurement accuracy .....  | 83  |
| 9.3.3                 | More stringent requirements .....                                 | 84  |
| 9.3.4                 | Test samples .....  | 84  |
| 9.4                   | Validation of the safety function .....                           | 84  |
| 9.4.1                 | General .....   | 84  |
| 9.4.2                 | Analysis and testing .....  | 85  |
| 9.5                   | Validation of the safety integrity of the SCS .....               | 85  |
| 9.5.1                 | General .....   | 85  |
| 9.5.2                 | Validation of subsystem(s) .....                                  | 85  |
| 9.5.3                 | Validation of measures against systematic failures .....          | 86  |
| 9.5.4                 | Validation of safety-related software .....                       | 86  |
| 9.5.5                 | Validation of combination of subsystems .....                     | 87  |
| 10                    | Documentation .....   | 87  |
| 10.1                  | General .....   | 87  |
| 10.2                  | Technical documentation .....                                     | 87  |
| 10.3                  | Information for use of the SCS .....                              | 89  |
| 10.3.1                | General .....   | 89  |
| 10.3.2                | Information for use given by the manufacturer of subsystems ..... | 89  |
| 10.3.3                | Information for use given by the SCS integrator .....             | 90  |
| Annex A (informative) | Determination of required safety integrity .....                  | 92  |
| A.1                   | General .....   | 92  |
| A.2                   | Matrix assignment for the required SIL .....                      | 92  |
| A.2.1                 | Hazard identification/indication .....                            | 92  |
| A.2.2                 | Risk estimation .....   | 92  |
| A.2.3                 | Severity (Se) .....   | 93  |
| A.2.4                 | Probability of occurrence of harm .....                           | 93  |
| A.2.5                 | Class of probability of harm (CI) .....                           | 96  |
| A.2.6                 | SIL assignment .....  | 96  |
| A.3                   | Overlapping hazards .....   | 98  |
| Annex B (informative) | Example of SCS design methodology .....                           | 99  |
| B.1                   | General .....   | 99  |
| B.2                   | Safety requirements specification .....                           | 99  |
| B.3                   | Decomposition of the safety function .....                        | 99  |
| B.4                   | Design of the SCS by using subsystems .....                       | 100 |
| B.4.1                 | General .....   | 100 |
| B.4.2                 | Subsystem 1 design – “guard door monitoring” .....                | 100 |
| B.4.3                 | Subsystem 2 design – “evaluation logic” .....                     | 102 |
| B.4.4                 | Subsystem 3 design – “motor control” .....                        | 103 |
| B.4.5                 | Evaluation of the SCS .....                                       | 103 |
| B.4.6                 | PFH .....   | 104 |

|  |  |     |
|--|--|-----|
| B.5                                    | Verification.....  | 104 |
| B.5.1                                  | General .....  | 104 |
| B.5.2                                  | Analysis.....  | 104 |
| B.5.3                                  | Tests .....  | 105 |
| Annex C (informative)                  | Examples of $MTTF_D$ values for single components .....                              | 106 |
| C.1                                    | General.....   | 106 |
| C.2                                    | Good engineering practices method .....  | 106 |
| C.3                                    | Hydraulic components.....  | 106 |
| C.4                                    | $MTTF_D$ of pneumatic, mechanical and electromechanical components.....              | 107 |
| Annex D (informative)                  | Examples for diagnostic coverage ( $DC$ ).....                                       | 109 |
| Annex E (informative)                  | Methodology for the estimation of susceptibility to common cause failures (CCF)..... | 111 |
| E.1                                    | General.....   | 111 |
| E.2                                    | Methodology .....  | 111 |
| E.2.1                                  | Requirements for CCF .....   | 111 |
| E.2.2                                  | Estimation of effect of CCF .....  | 111 |
| Annex F (informative)                  | Guideline for software level 1 .....   | 114 |
| F.1                                    | Software safety requirements.....  | 114 |
| F.2                                    | Coding guidelines .....  | 115 |
| F.3                                    | Specification of safety functions.....   | 116 |
| F.4                                    | Specification of hardware design .....   | 117 |
| F.5                                    | Software system design specification.....  | 119 |
| F.6                                    | Protocols .....  | 121 |
| Annex G (informative)                  | Examples of safety functions.....  | 124 |
| Annex H (informative)                  | Simplified approaches to evaluate the $PFH$ value of a subsystem .....               | 125 |
| H.1                                    | Table allocation approach .....  | 125 |
| H.2                                    | Simplified formulas for the estimation of $PFH$ .....                                | 127 |
| H.2.1                                  | General .....  | 127 |
| H.2.2                                  | Basic subsystem architecture A: single channel without a diagnostic function .....   | 127 |

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**SAFETY OF MACHINERY –  
FUNCTIONAL SAFETY OF SAFETY-RELATED CONTROL SYSTEMS**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62061 has been prepared by IEC technical committee 44: Safety of machinery – Electrotechnical aspects. It is an International Standard.

This second edition cancels and replaces the first edition, published in 2005, Amendment 1:2012 and Amendment 2:2015. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- structure has been changed and contents have been updated to reflect the design process of the safety function,
- standard extended to non-electrical technologies,
- definitions updated to be aligned with IEC 61508-4,
- functional safety plan introduced and configuration management updated (Clause 4),
- requirements on parametrization expanded (Clause 6),
- reference to requirements on security added (Subclause 6.8),
- requirements on periodic testing added (Subclause 6.9),

- various improvements and clarification on architectures and reliability calculations (Clause 6 and Clause 7),
- shift from "SILCL" to "maximum SIL" of a subsystem (Clause 7),
- use cases for software described including requirements (Clause 8),
- requirements on independence for software verification (Clause 8) and validation activities (Clause 9) added,
- new informative annex with examples (Annex G),
- new informative annexes on typical  $MTTF_D$  values, diagnostics and calculation methods for the architectures (Annex C, Annex D and Annex H).

The text of this International Standard is based on the following documents:

| Draft       | Report on voting |
|-------------|------------------|
| 44/885/FDIS | 44/888/RVD       |

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/standardsdev/publications](http://www.iec.ch/standardsdev/publications).

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

As a result of automation, demand for increased production and reduced operator physical effort, Safety-related Control Systems (referred to as SCS) of machines play an increasing role in the achievement of overall machine safety. Furthermore, the SCS themselves increasingly employ complex electronic technology.

IEC 62061 specifies requirements for the design and implementation of safety-related control systems of machinery. This document is machine sector specific within the framework of IEC 61508.

NOTE While IEC 62061 and ISO 13849-1 are using different methodologies for the design of safety related control systems, they intend to achieve the same risk reduction.

This International Standard is intended for use by machinery designers, control system manufacturers and integrators, and others involved in the specification, design and validation of an SCS. It sets out an approach and provides requirements to achieve the necessary performance and facilitates the specification of the safety functions intended to achieve the risk reduction.

This document provides a machine sector specific framework for functional safety of an SCS of machines. It only covers those aspects of the safety lifecycle that are related to safety requirements allocation through to safety validation. Requirements are provided for information for safe use of SCS of machines that can also be relevant to later phases of the lifecycle of an SCS.

There are many situations on machines where SCS are employed as part of safety measures that have been provided to achieve risk reduction. A typical case is the use of an interlocking guard that, when it is opened to allow access to the danger zone, signals the safety related parts of the machine control system to stop hazardous machine operation. In automation, the machine control system that is used to achieve correct operation of the machine process often contributes to safety by mitigating risks associated with hazards arising directly from control system failures. This document gives a methodology and requirements to:

- assign the required safety integrity for each safety function to be implemented by SCS;
- enable the design of the SCS appropriate to the assigned safety (control) function(s);
- integrate safety-related subsystems designed in accordance with other applicable functional safety-related standards (see 6.3.4);
- validate the SCS.

This document is intended to be used within the framework of systematic risk reduction, in conjunction with risk assessment described in ISO 12100. Suggested methodologies for a safety integrity assignment are given in informative Annex A.

## **SAFETY OF MACHINERY – FUNCTIONAL SAFETY OF SAFETY-RELATED CONTROL SYSTEMS**

### **1 Scope**

This International Standard specifies requirements and makes recommendations for the design, integration and validation of safety-related control systems (SCS) for machines. It is applicable to control systems used, either singly or in combination, to carry out safety functions on machines that are not portable by hand while working, including a group of machines working together in a co-ordinated manner.

This document is a machinery sector specific standard within the framework of IEC 61508 (all parts).

The design of complex programmable electronic subsystems or subsystem elements is not within the scope of this document. This is in the scope of IEC 61508 or standards linked to it; see Figure 1.

NOTE 1 Elements such as systems on chip or microcontroller boards are considered complex programmable electronic subsystems.

The main body of this sector standard specifies general requirements for the design, and verification of a safety-related control system intended to be used in high/continuous demand mode.

This document:

- is concerned only with functional safety requirements intended to reduce the risk of hazardous situations;
- is restricted to risks arising directly from the hazards of the machine itself or from a group of machines working together in a co-ordinated manner;

NOTE 2 Requirements to mitigate risks arising from other hazards are provided in relevant sector standards. For example, where a machine(s) is part of a process activity, additional information is available in IEC 61511.

This document does not cover

- electrical hazards arising from the electrical control equipment itself (e.g. electric shock – see IEC 60204-1);
- other safety requirements necessary at the machine level such as safeguarding;
- specific measures for security aspects – see IEC TR 63074.

This document is not intended to limit or inhibit technological advancement.

Figure 1 illustrates the scope of this document.
