

FINAL VERSION

VERSION FINALE

Connectors for DC-application in photovoltaic systems – Safety requirements and tests

Connecteurs pour applications en courant continu pour systèmes photovoltaïques – Exigences de sécurité et essais

CONTENTS

FOREWORD	4
1 Scope	6
2 Normative references	6
3 Terms and definitions	8
4 Classification	12
4.1 General	12
4.2 Type of connector	13
4.3 Additional characteristics	13
5 Constructional requirements and performance	13
5.1 General	13
5.2 Marking and identification	13
5.2.1 Identification	13
5.2.2 Marking	14
5.2.3 Technical documentation	14
5.3 Provision against incorrect mating (non-intermateable)	14
5.4 Protection against electric shock	14
5.5 Terminations and connection methods	14
5.6 Resistance to deterioration	15
5.7 General design	15
5.8 Design of a free connector	16
5.9 Degree of protection (IP Code)	16
5.10 Dielectric strength	16
5.11 Mechanical and electrical durability	16
5.12 Range of ambient temperature	16
5.13 Temperature rise	16
5.14 Cable anchorage	17
5.14.1 Connectors intended to be used with cables specified by the manufacturer	17
5.14.2 Connectors intended to be used with generic cables	17
5.15 Mechanical strength	18
5.16 Connector without locking device	18
5.17 Connector with locking device	18
5.18 Clearances and creepage distances	19
5.18.1 General	19
5.18.2 Clearances	19
5.18.3 Creepage distances	19
5.19 Insulation parts	21
5.19.1 General	21
5.19.2 Outer accessible parts	21
5.19.3 Inner parts	21
5.20 Current carrying parts and resistance against corrosion	21
6 Tests	22
6.1 General	22
6.2 Preparation of specimens	22
6.3 Performance of tests	23
6.3.1 General	23

6.3.2	Durability of marking	24
6.3.3	Protection against electric shock	24
6.3.4	Temperature rise	24
6.3.5	Mechanical operation.....	24
6.3.6	Bending (flexing) test (see IEC 60309-1:1999, 24.4).....	25
6.3.7	Measurement of clearances and creepage distances	26
6.3.8	Dielectric strength.....	26
6.3.9	Corrosion test.....	27
6.3.10	Mechanical strength at lower temperatures.....	27
6.3.11	Change of temperature (IEC 60068-2-14 test Na)	27
6.3.12	Damp heat test.....	27
6.3.13	Insertion and withdrawal force	28
6.3.14	Effectiveness of connector coupling device.....	28
6.3.15	Terminations and connecting methods.....	28
6.4	Test schedule (routine test) for non-rewirable free connectors	29
6.5	Test schedule	29
Annex A (informative) Warning symbols used on connectors		36
Annex B (normative) Measurement of clearances and creepage distances		37
Bibliography.....		41
Figure 1 – Device for the bending test.....		26
Figure A.1 – Symbol "DO NOT DISCONNECT UNDER LOAD".....		36
Figure A.2 – Symbol "DO NOT DISCONNECT UNDER LOAD" (IEC 60417-6070 (2014-06))		36
Figure B.1– Examples of methods of measuring clearances and creepage distances.....		40
Table 2 – Rated impulse voltages and minimum clearances.....		19
Table 3 – Creepage distances for basic insulation		20
Table 4 – Plan of specimens required for tests.....		22
Table 5 – Values of torque for screw-type clamping units.....		23

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**CONNECTORS FOR DC-APPLICATION IN PHOTOVOLTAIC SYSTEMS –
SAFETY REQUIREMENTS AND TESTS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

DISCLAIMER

This Consolidated version is not an official IEC Standard and has been prepared for user convenience. Only the current versions of the standard and its amendment(s) are to be considered the official documents.

This Consolidated version of IEC 62852 bears the edition number 1.1. It consists of the first edition (2014-11) [documents 82/878/FDIS and 82/905/RVD] and its amendment 1 (2020-03) [documents 82/1646/FDIS and 82/1667/RVD]. The technical content is identical to the base edition and its amendment.

This Final version does not show where the technical content is modified by amendment 1. A separate Redline version with all changes highlighted is available in this publication.

International Standard IEC 62852 has been prepared by IEC technical committee 82: Solar photovoltaic energy systems.

This International Standard is derived from EN 50521.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of the base publication and its amendment will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

CONNECTORS FOR DC-APPLICATION IN PHOTOVOLTAIC SYSTEMS – SAFETY REQUIREMENTS AND TESTS

1 Scope

This International Standard applies to connectors for use in the d.c. circuits of photovoltaic systems according to class II of IEC 61140:2001 with rated voltages up to 1 500 V d.c. and rated currents up to 125 A per contact.

This standard applies to connectors without breaking capacity but which might be engaged and disengaged under voltage.

This standard also applies to connectors which are intended to be built-in or integrated in enclosures of devices for photovoltaic systems. This standard may be used as a guide for connectors in photovoltaic systems of classes 0 and III according to IEC 61140:2001 as well as for protection for Class II equipment intended for use at less than 50 V d.c. This document does not apply to connectors for data collection, tracker controls or similar, but it may be used as a guide for those connectors.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050 (all parts): *International Electrotechnical Vocabulary* (available at <http://www.electropedia.org>)

IEC 60060-1, *High-voltage test techniques – Part 1: General definitions and test requirements*

IEC 60068-1, *Environmental testing – Part 1: General and guidance*

IEC 60068-2-14, *Environmental testing – Part 2-14: Tests – Test N: Change of temperature*

IEC 60068-2-75, *Environmental testing – Part 2-75: Tests – Test Eh: Hammer tests*

IEC 60068-2-78, *Environmental testing – Part 2-78: Tests – Test Cab: Damp heat, steady state*

IEC 60112, *Method for the determination of the proof and the comparative tracking indices of solid insulating materials*

IEC 60216-1, *Electrical insulating materials – Thermal endurance properties – Part 1: Ageing procedures and evaluation of test results*

IEC 60216-5, *Electrical insulating materials – Thermal endurance properties – Part 5: Determination of relative thermal endurance index (RTE) of an insulating material*

IEC 60228, *Conductors of insulated cables*
