Approved 12 May 2004

American National Standard Institute

Approved 9 February 2004

IEEE-SA Standards Board

Abstract: Instructions for conducting and reporting the more generally applicable and acceptable tests of polyphase induction motors and generators are covered.

Keywords: acceptance and performance testing, generators, induction, machines, motors, polyphase

No part of this publication may be reproduced in any form, in an electronic retrieval system or otherwise, without the prior written permission of the publisher.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied "AS IS."

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of affairs. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or endorsing professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standard document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than a formal position, explanation, or interpretation of the IEEE.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board

Piscataway, NJ 08855-1331 USA

NOTE—Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Introduction

This introduction is not part of IEEE Std 112-2004, IEEE Standard Test Procedure for Polyphase Induction Motors and Generators.

This standard provides the basic test procedure for evaluating the performance of a polyphase induction motor or generator of any size. Each revision of the standard since its 1964 introduction as an IEEE standard has been to keep the standard current with improvements in instrumentation, with improvements in test techniques, with increased knowledge in the art of measurements, and with the constant change in the needs and desires of the machine users and of those concerned with energy conservation and the like. Major portions of the document have been rearranged to accomplish this and the user is cautioned to check any external references to particular clauses of previous versions for the correct clause number in this version. Each individual test is defined and each efficiency test method is now covered in more detail and step-by-step instructions are presented. Standard symbols are now used for all quantities.

Notice to users

Errata

Errata, if any, for this and all other standards can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/updates/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Interpretations

Current interpretations can be accessed at the following URL: <http://standards.ieee.org/reading/ieee/interp/index.html>.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents or patent applications for which a license may be required to implement an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Participants

The following is a list of the participants of the Electric Machinery Committee Working Group on this standard:

Franklin H. Grooms, *Chair*

Paul Anderson	Nirmal K. Ghai	Joseph Kline
Robert Bartheld (Liaison)	John S. Hsu	Bill Lockley
Paul G. Cummings	Khursheed S. Hussein	Walter J. Martiny
Roger H. Daugherty	Ziba Kellum	Venkatachari Rajagopalan
James H. Dymond		Steven J. Stretz

The following members of the individual balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

Paul Anderson	Jorge Fernandez-Daher	Lisardo Lourido
William Bartley	Trilok Garg	Antonio J. Marques-Cardoso
Thomas Bishop	Nirmal K. Ghai	Jesus Martinz
Thomas Blair	Franklin H. Grooms	Walter J. Martiny
Steven Brockschink	Randall Groves	Thomas McCauley
Weijen Chen	Bal Gupta	Nigel McQuin
Tommy Cooper	Paul Hamer	Janos Michalec
Mike Darby	Gary Heuston	Gary Michel
Roger Daugherty	Ajit Hiranandani	Krzysztof Najdenkoski
Byron Davenport	Edward Horgan Jr.	Arthur Neubauer
Gary Donner	George Kalacherry	Nils Nilsson
James H. Dymond	Yuri Khersonsky	Alvaro Portillo
James H. Edmonds	Geoff Klempner	Madan Rana
Ahmed El-Serafi	Joseph Kline	James Ruggieri
Amir El-Sheikh	Roger Lawrence	Greg Stone
Gary Engmann	Timothy LeMire	Shanmugan Thamilarasan

When the IEEE-SA Standards Board approved this standard on 9 February 2004, it had the following membership:

Don Wright, *Chair*

Vacant, *Vice Chair*

Smith Gorman, *Secretary*

Chuck Adams	Mark S. Halpin	Daleep C. Mohla
H. Stephen Berger	Raymond Hapeman	Paul Nikolich
Mark D. Bowman	Richard J. Holleman	T. W. Olsen
Joseph A. Bruder	Richard H. Hulett	Ronald C. Petersen
Bob Davis	Lowell G. Johnson	Gary S. Robinson
Roberto de Boisson	Joseph L. Koepfinger*	Frank Stone
Julian Forster*	Hermann Koch	Malcolm V. Thaden
Arnold M. Greenspan	Thomas J. McGean	Doug Topping
		Joe D. Watson

*Member Emeritus

Also included are the following nonvoting IEEE-SA Standards Board liaisons:

Satish K. Aggarwal, *NRC Representative*
Richard DeBlasio, *DOE Representative*
Alan Cookson, *NIST Representative*

IEEE Standard Test Procedure for Polyphase Induction Motors and Generators

1. Overview

1.1 Scope

This standard covers instructions for conducting and reporting the more generally applicable and acceptable tests of polyphase induction motors and generators. Many of the tests described may be applied to both motors and generators, as needed, and no attempt is made to partition the test procedure into clauses and subclauses that separately apply to motors or to generators. Whenever the term *motor* is used, it is to be understood that it may be replaced by the term *generator*, if applicable. Likewise, whenever *machine* is used, it may be replaced by either *motor* or *generator*, if applicable. Since polyphase power systems are almost universally three-phase systems, the equations in this standard have been written specifically for three phases. When the test is performed on other than three-phase power, the equations shall be modified appropriately.

1.2 Purpose

Instructions for conducting and reporting the more generally applicable and acceptable tests are covered to determine the performance and characteristics of polyphase induction motors and generators. Additional tests, not specified herein, may be required to satisfy specific research or application needs. These procedures shall not be interpreted as requiring the performing of any specific test in a given transaction.

2. References

This standard shall be used in conjunction with the following standards. When the following standards are superseded by an approved revision, the latest revision shall apply.

IEEE Std 43TM-2000, IEEE Recommended Practice for Testing Insulation Resistance of Rotating Machinery.^{1, 2}
