IEEE Standard for Techniques and Measures to Manage Functional Safety and Other Risks with Regard to Electromagnetic Disturbances

Developed by the

Standards Development and Education Committee
of the
IEEE Electromagnetic Compatibility Society

Approved 4 June 2020

IEEE SA Standards Board

Abstract: A set of practical methods is provided for helping to manage the levels of risks due to electromagnetic (EM) disturbances throughout the lifecycles of electronic equipment. These risks include the consequences of all types of errors, malfunctions, or failures in products, equipment, and systems that employ modern electronic technologies (i.e., in hardware and/or software).

The work done in creating IEC 61000-1-2:2016 (Electromagnetic compatibility (EMC) - Part 1-2: General - Methodology) is supplemented by this standard for the achievement of functional safety of electrical and electronic systems including equipment with regard to electromagnetic phenomena) by providing requirements for detailed practical techniques and measures for helping to manage risks (not just functional safety) that could be caused by EM disturbances.

These techniques and measures would be used in the management, specification, design, implementation, verification and validation, and through-life operation, maintenance, repair, refurbishment, upgrading, and eventual dismantling for disposal of equipment and systems employing digital electronic systems, for both hardware and software (firmware).

Keywords: digital systems, electromagnetic interference, EMI, electromagnetic compatibility, EMC, electromagnetic disturbances, functional safety, IEEE 1848™, risk management, risk reduction

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE Standards documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page (<https://standards.ieee.org/ipr/disclaimers.html>), appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.”

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE SA) Standards Board. IEEE develops its standards through an accredited consensus development process, which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed by volunteers with scientific, academic, and industry-based expertise in technical working groups. Volunteers are not necessarily members of IEEE or IEEE SA, and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE makes no warranties or representations concerning its standards, and expressly disclaims all warranties, express or implied, concerning this standard, including but not limited to the warranties of merchantability, fitness for a particular purpose and non-infringement. In addition, IEEE does not warrant or represent that the use of the material contained in its standards is free from patent infringement. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity, nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: THE NEED TO PURCHASE SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE is the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, nor be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, or educational courses, an individual presenting information on IEEE standards shall make it clear that the presenter's views should be considered the personal views of that individual rather than the formal position of IEEE, IEEE SA, the Standards Committee, or the Working Group.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE or IEEE SA. However, **IEEE does not provide interpretations, consulting information, or advice pertaining to IEEE Standards documents.**

Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its Societies and Standards Coordinating Committees are not able to provide an instant response to comments, or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in evaluating comments or in revisions to an IEEE standard is welcome to join the relevant IEEE working group. You can indicate interest in a working group using the Interests tab in the Manage Profile & Interests area of the [IEEE SA myProject system](#). An IEEE Account is needed to access the application.

Comments on standards should be submitted using the [Contact Us](#) form.

Laws and regulation

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not constitute compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Data privacy

Users of IEEE Standards documents should evaluate the standards for considerations of data privacy and data ownership in the context of assessing and using the standards in compliance with applicable laws and regulations.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under US and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate licensing fees, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400; <https://www.copyright.com/>. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit [IEEE Xplore](#) or [contact IEEE](#). For more information about the IEEE SA or IEEE's standards development process, visit the IEEE SA Website.

Errata

Errata, if any, for all IEEE standards can be accessed on the [IEEE SA Website](#). Search for standard number and year of approval to access the web page of the published standard. Errata links are located under the Additional Resources Details section. Errata are also available in [IEEE Xplore](#). Users are encouraged to periodically check for errata.

Patents

IEEE Standards are developed in compliance with the [IEEE SA Patent Policy](#).

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the

IEEE SA Website at <https://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

IMPORTANT NOTICE

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. IEEE Standards development activities consider research and information presented to the standards development group in developing any safety recommendations. Other information about safety practices, changes in technology or technology implementation, or impact by peripheral systems also may be pertinent to safety considerations during implementation of the standard. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

Participants

At the time this IEEE standard was completed, the IEEE 1848 Working Group had the following membership:

Keith Armstrong, Chair
Alistair Duffy, Vice Chair

Luk Arnaut
Christine Blair
Kai Borgeest
Tom Braxton
Niklas Briest
Harald Buchwald
Felix Burghardt
Johan Catrysse
Junhong Deng
Pete Dorey

Introduction

This introduction is not part of IEEE Std 1848-2020, IEEE Standard for Techniques and Measures to Manage Functional Safety and Other Risks with Regard to Electromagnetic Disturbances.

This IEEE Standard provides guidance on the assessment and application of techniques and measures that can help reduce the risks associated with the interfering effects of electromagnetic disturbances on digital electronic systems, especially safety- or mission-related systems.

When competently selected and applied, a set of such techniques and measures can provide the part of the evidence relevant to EMI required for justifying functional safety decisions and for compliance with functional safety standards (including all applicable parts of IEC 61508 Ed.2:2010 or functional safety standards that are based on IEC 61508).¹

The scope of this standard does not cover human health effects caused by electromagnetic fields (EMF); HERF (Hazards of Electromagnetic Radiation to Fuel); or HERO (Hazards of Electromagnetic Radiation to Ordnance).

Beneficial comments (recommendations, additions, deletions) and any pertinent data that may be of use in improving this document should be addressed to IEEE, EMC Society, Standards Development and Education Committee, and P1848 Working Group.

A committee consisting of representatives of academia, government, and industry prepared this document under the IEEE EMC Society Standards Development and Education Committee.

IEEE Standard for Techniques and Measures to Manage Functional Safety and Other Risks with Regard to Electromagnetic Disturbances

1. Overview

This IEEE Standard provides guidance on the assessment and application of techniques and measures that can reduce the risks associated with the interfering effects of electromagnetic disturbances on digital electronic systems, especially safety- or mission-related systems.

When competently selected and applied, a set of such techniques and measures can provide the part of the evidence relevant to EMI required for justifying functional safety decisions and for compliance with functional safety standards (including all applicable parts of IEC 61508 Ed.2:2010 or functional safety standards that are based on IEC 61508; see the partial list in Annex C).

They can also provide part of the evidence relevant to EMI for medical/healthcare systems for which risks are managed in accordance with ISO 14971:2007 [B11].²

This standard supports the adoption of adequate electromagnetic resilience engineering practices throughout the functional safety lifecycle by offering further guidance and practical advice on the application of risk management activities, including the techniques and measures set out in IEC 61000-1-2:2016.

While it is primarily intended to be used by those who have responsibilities for functional safety, the methodologies, techniques, and measures it describes can also be used for the reduction of other kinds of risks in any systems that employ electronic technology, such as security risks and non-safety-related risks (for example, risks to the operation of commercial IT systems). However, this standard does not address the risks to human health that can be caused by electromagnetic fields (EMF); HERF (Hazards of Electromagnetic Radiation to Fuel); or HERO (Hazards of Electromagnetic Radiation to Ordnance).

² The numbers in brackets correspond to those of the bibliography in Annex B.

1.1 Scope

This standard provides a set of practical methods for managing functional safety and other risks due to electromagnetic (EM) disturbances throughout the life of a product.

This includes all types of errors, malfunctions or failures in products, equipment, and systems that employ modern digital technologies (i.e., hardware and software).

1.2 Purpose

The purpose of this standard is to provide requirements for the techniques and measures used in the design, verification, and validation of systems, hardware, and software (firmware).

These would be applied where EM disturbances could cause errors, malfunctions, or failures leading to unacceptable risks over the lifetime of equipment, whether safety or any other kind of risk is to be managed.

1.3 How to use this standard

This standard requires a structured justification of adequate electromagnetic resilience of a system to be individually provided for each safety function in that system, following the approach taken by the IEC's Basic Standard on Functional Safety, IEC 61508.

Clause 4 describes the use of this standard in detail, and the required structured justification for each of a system's safety functions is achieved by completing the cells in the right-hand-most column of the checklist in Clause 5 plus providing all the documents referenced in those cells.

In general, it is expected that most systems requiring safety risk management will have several safety functions, each one of which will be associated with its own, completed, Clause 5 checklist. In some circumstances, two or more different safety functions may be able to be addressed by a single Clause 5 checklist.

IEC 61508 provides a well-proven process for assessing functional safety-related risks and by how much they need reduction (its SILs 1-4), and then it prescribes the well-proven techniques and measures that shall or should be employed to reducing those risks to the extent required. Unfortunately, neither it nor its 'daughter' standards (see the partial list in Annex C) contains a complete set of techniques and measures suitable for reducing the functional safety risks due to EM disturbances to the extent required.

This standard relies on IEC 61508's hazard analysis and risk assessment process having been completed as part of the overall risk management of functional safety for a system, and merely adds the missing techniques and measures necessary for fully controlling the functional safety risks that could be affected by EM disturbances.

1.4 The relationship between this IEEE Standard and IET 2017 [B8]

These two documents are closely related. Because the risk management of EM disturbances is such a new field, a conscious effort was made by the IEEE's working group to keep the texts of the two documents identical as far as possible.
