Abstract: Information for the implementation of prognostics and health management (PHM) for electronic systems is described in this standard. A normative framework for classifying PHM capability and for planning the development of PHM for an electronic system or product is also described in this standard. Manufacturers and end users can use this standard for planning the appropriate prognostics and health management techniques to implement and the associated life cycle operations for the system of interest.

Keywords: classification of electronics, electronic systems, health management, IEEE 1856™, implementation in electronics, PHM definitions, PHM functional model, PHM Metrics, PHM operational model, prognostics

Important Notices and Disclaimers Concerning IEEE Standards Documents

IEEE documents are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading “Important Notices and Disclaimers Concerning IEEE Standards Documents.” They can also be obtained on request from IEEE or viewed at <http://standards.ieee.org/IPR/disclaimers.html>.

Notice and Disclaimer of Liability Concerning the Use of IEEE Standards Documents

IEEE Standards documents (standards, recommended practices, and guides), both full-use and trial-use, are developed within IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (“IEEE-SA”) Standards Board. IEEE (“the Institute”) develops its standards through a consensus development process, approved by the American National Standards Institute (“ANSI”), which brings together volunteers representing varied viewpoints and interests to achieve the final product. IEEE Standards are documents developed through scientific, academic, and industry-based technical working groups. Volunteers in IEEE working groups are not necessarily members of the Institute and participate without compensation from IEEE. While IEEE administers the process and establishes rules to promote fairness in the consensus development process, IEEE does not independently evaluate, test, or verify the accuracy of any of the information or the soundness of any judgments contained in its standards.

IEEE Standards do not guarantee or ensure safety, security, health, or environmental protection, or ensure against interference with or from other devices or networks. Implementers and users of IEEE Standards documents are responsible for determining and complying with all appropriate safety, security, environmental, health, and interference protection practices and all applicable laws and regulations.

IEEE does not warrant or represent the accuracy or content of the material contained in its standards, and expressly disclaims all warranties (express, implied and statutory) not included in this or any other document relating to the standard, including, but not limited to, the warranties of: merchantability; fitness for a particular purpose; non-infringement; and quality, accuracy, effectiveness, currency, or completeness of material. In addition, IEEE disclaims any and all conditions relating to: results; and workmanlike effort. IEEE standards documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of an IEEE standard is wholly voluntary. The existence of an IEEE standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change from time to time about through developments in the state of the art and comments received from users of the standard.

In publishing and making its standards available, IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity nor is IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing any IEEE Standards document, should rely upon his or her own independent judgment in the exercise of reasonable care in any given circumstances or, as appropriate, seek the advice of a competent professional in determining the appropriateness of a given IEEE standard.

IN NO EVENT SHALL IEEE BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO: PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON ANY STANDARD, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE AND REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations

The IEEE consensus development process involves the review of documents in English only. In the event that an IEEE standard is translated, only the English version published by IEEE should be considered the approved IEEE standard.

Official statements

A statement, written or oral, that is not processed in accordance with the IEEE-SA Standards Board Operations Manual shall not be considered or inferred to be the official position of IEEE or any of its committees and shall not be considered to be, or be relied upon as, a formal position of IEEE. At lectures, symposia, seminars, conferences, and educational courses, an individual presenting information on IEEE standards shall make it clear that his or her views should be considered the personal views of that individual rather than the formal position of IEEE.

Comments on standards

Comments for revision of IEEE Standards documents are welcome from any interested party, regardless of membership affiliation with IEEE. However, IEEE does not provide consulting information or advice pertaining to IEEE Standards documents. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Since IEEE standards represent a consensus of concerned interests, it is important that any responses to comments and questions also receive the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to comments or questions except in those cases where the matter has previously been addressed. For the same reason, IEEE does not respond to interpretation requests. Any person who would like to participate in revisions to an IEEE standard is welcome to join the relevant IEEE working group.

Comments on standards should be submitted to the following address:

Secretary, IEEE-SA Standards Board
445 Hoes Lane
Piscataway, NJ 08854 USA

Laws and regulations

Users of IEEE Standards documents should consult all applicable laws and regulations. Compliance with the provisions of any IEEE Standards document does not imply compliance to any applicable regulatory requirements. Implementers of the standard are responsible for observing or referring to the applicable regulatory requirements. IEEE does not, by the publication of its standards, intend to urge action that is not in compliance with applicable laws, and these documents may not be construed as doing so.

Copyrights

IEEE draft and approved standards are copyrighted by IEEE under U.S. and international copyright laws. They are made available by IEEE and are adopted for a wide variety of both public and private uses. These include both use, by reference, in laws and regulations, and use in private self-regulation, standardization, and the promotion of engineering practices and methods. By making these documents available for use and adoption by public authorities and private users, IEEE does not waive any rights in copyright to the documents.

Photocopies

Subject to payment of the appropriate fee, IEEE will grant users a limited, non-exclusive license to photocopy portions of any individual standard for company or organizational internal use or individual, non-commercial use only. To arrange for payment of licensing fees, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

Updating of IEEE Standards documents

Users of IEEE Standards documents should be aware that these documents may be superseded at any time by the issuance of new editions or may be amended from time to time through the issuance of amendments, corrigenda, or errata. An official IEEE document at any point in time consists of the current edition of the document together with any amendments, corrigenda, or errata then in effect.

Every IEEE standard is subjected to review at least every 10 years. When a document is more than 10 years old and has not undergone a revision process, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE standard.

In order to determine whether a given document is the current edition and whether it has been amended through the issuance of amendments, corrigenda, or errata, visit the IEEE Explore at <http://ieeexplore.ieee.org/> or contact IEEE at the address listed previously. For more information about the IEEE-SA or IEEE's standards development process, visit the IEEE-SA Website at <http://standards.ieee.org>.

Errata

Errata, if any, for all IEEE standards can be accessed on the IEEE-SA Website at the following URL: <http://standards.ieee.org/findstds/errata/index.html>. Users are encouraged to check this URL for errata periodically.

Patents

Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken by the IEEE with respect to the existence or validity of any patent rights in connection therewith. If a patent holder or patent applicant has filed a statement of assurance via an Accepted Letter of Assurance, then the statement is listed on the IEEE-SA Website at <http://standards.ieee.org/about/sasb/patcom/patents.html>. Letters of Assurance may indicate whether the Submitter is willing or unwilling to grant licenses under patent rights without compensation or under reasonable rates, with reasonable terms and conditions that are demonstrably free of any unfair discrimination to applicants desiring to obtain such licenses.

Essential Patent Claims may exist for which a Letter of Assurance has not been received. The IEEE is not responsible for identifying Essential Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patent Claims, or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from the IEEE Standards Association.

Participants

At the time this IEEE standard was completed, the Prognostics and Health Management of Electronic Systems Working Group had the following membership:

Michael Pecht, *Chair*
Sony Mathew, *Vice Chair*
Louis J. Gullo, *Sponsor Chair*
N. Jordan Jameson, *Secretary*
Arvind Sai Sarasi Vasani, *Associate Secretary*

Vivek Agarwal	Qian Han	Prakash Patnaik
Hans-Jürgen Albrecht	Herbert Hect	Suresh Perinpanayagam
Allegra Alessi	Vesa Hekkala	Cheng Qi
Michael Azarian	Luis Hernandez	Dev Raheja
Chris Bailey	Andrew Hess	Pradeep Ramuhani
Eric R. Bechhoefer	Wesley Hines	Mike Roellig
Randy Bickford	Dennis Hoffman	Richard Ross
Gautam Biswas	Stephen B. Johnson	Rex Sande
Yizhak Bot	Suk Joo Bae	Peter Sandherr
Michael Boyd	Kwang Jung	Prasanna Saxena
José R. Celaya	David A. Karpuszk	Fred Schenkelberg
Ian Chan	Zoubir Khatir	Michael Schumacher
Joseph Childs	Chetan Kulkarni	Brian Seal
Tommy Chow	Manoj Kumar	Peck Seng Chua
Jaesik Chung	Ranjith Kumar	Hongbin Shi
Kuan-Jung (Kenny) Chung	Pradeep Lall	Shubhangi Shrikhande
Steve Clay	Jack Lam	Michael Sievers
Jamie Coble	Benjamin Lamontoux	Jane Smith
Eduardo Cota	Jean-Baptiste Lemer	Ben Sykes
Sreerupa Das	Anatoli Lisnianski	Chuck Thomas
Darryl N. Davis	Jie Liu	Jason Thomas
Luiz Gonzaga de Souza	Zhen Li	Vanam Upendranath
Ribeiro	Huijun Lu	P.V. Varde
Pierre Dersin	John Martin	Jin Wang
Nishkamraj Deshpande	Jean-Remi Masse	Pingfeng Wang
Walter Fenk	Leopoldo M. Mayoral	Daniel J Weyer
Lorraine M. Fesq	Paulo Mendes	Juergen Wilde
Nick Frankle	Andreas Middendorf	Andrew Wileman
Peter Ghavami	Chandru Mirchandani	Timothy J. Wilmering
Kirk Gray	Nilimb Misal	Weizhong Yan
Ed Habtour	Subrat Nanda	David Yellamati
	Kurt N. Ochsie	Sun Yongquan
	Krishna Patapati	

The following members of the balloting committee voted on this standard. Balloters may have voted for approval, disapproval, or abstention.

Robert Aiello	Mark Davis	Eric W. Gray
Johann Amsenga	Nicolas Degrenne	Randall Groves
Charles Barest	Richard Doyle	Louis J. Gullo
Vizhak Bot	David Droste	Werner Hoelzl
Bill Brown	Donald Dunn	Peng Hu
Susan Burgess	Sourav Dutta	Noriyuki Ikeuchi
Juan Carreon	Fredric Friend	Atsushi Ito
Joseph Childs	David Fuschi	Kenneth Karg
Keith Chow	Allan Gillard	Piotr Karocki

Daleep Mohla
Damir Novosel
Ronald C. Petersen
Annette D. Reilly

Timothy Robson
Dorothy Stanley
Arian Stephens
Mehmet Ulema
Phil Wennblom
Howard Wolfman
Yu Yuan

*Member Emeritus

Introduction

This introduction is not part of IEEE Std 1856-2017, IEEE Standard Framework for Prognostics and Health Management of Electronic Systems.

Prognostics and health management is an approach to protect the integrity of equipment and avoid unanticipated operational problems leading to mission performance deficiencies, degradation, and adverse effects on mission safety. Researchers and application developers have developed a variety of approaches, methods, and tools that are useful for these purposes, but applications to real-world situations may be hindered by the lack of visibility into these tools, the lack of uniformity in the application of these tools, and the lack of consistency in their demonstrated results. There is a need for documented and favorable guidance that will encourage practitioners to invest the resources necessary to put these techniques into practice. While specific application domains often require customized treatment for PHM application development, some core principles apply to all. This document describes those core principles and exemplifies their application within the electronics domain.

While this standard presents the normative requirements for a PHM system, [Annex A](#) will act as a guide for those who wish to implement prognostics and health management for complex electronic components and systems. However, it is possible to extend the core principles described in this document to other application domains, such as systems comprising electro-mechanical, mechanical, and structural elements.

IEEE Standard Framework for Prognostics and Health Management of Electronic Systems

1. Overview

1.1 Background

The goal of this standard is to provide information for the implementation of prognostics and health management (PHM) for electronic systems. Within the system health management community, there are several different interpretations of the term *prognostics*, such as predictive analysis, reliability prediction, damage accumulation prediction, or condition-based prediction. This standard can be used by manufacturers and end users for planning the appropriate prognostics and health management methodology to implement and the associated life cycle operations for the system of interest. This standard aims to provide practitioners with information that will help them make business cases for PHM implementation and select proper strategies and performance metrics to evaluate PHM results. The overall aim is to provide a broad overview of PHM while at the same time provide significant details to assist the practitioner in making appropriate decisions.

1.2 Scope

This standard covers all aspects of PHM of electronic systems, including definitions, approaches, algorithms, sensors and sensor selection, data collection, storage and analysis, anomaly detection, diagnosis, decision and response effectiveness, metrics, life cycle cost of implementation, return on investment, and documentation. This standard describes a normative framework for classifying PHM capability and for planning the development of PHM for an electronic system or product. The use of this standard is not required throughout the industry¹. This standard provides information to aid practitioners in the selection of PHM strategies and approaches to meet their needs.

1.3 Purpose

The purpose of this standard is to classify and define the concepts involved in PHM of electronic systems and to provide a standard framework that assists practitioners in the development of business cases and the selection of approaches, methodologies, algorithms, condition monitoring equipment, procedures, and strategies for implementing PHM of electronic systems.

¹At the time of adoption of this standard, there is no known external requirement to use a PHM standard. There is no external agency or regulatory body that is promoting the application of this standard. It is expected that after the approval of this standard, the industry will start using this standard to generate the requirements of PHM systems that will be included in their particular system or products/ applications.
